3 概要

TPS370x-xx ファミリの電源電圧監視 IC は、主に DSP やプロセッサを使用したシステムにおける回路の初期化およびタイミング監視に最適です。

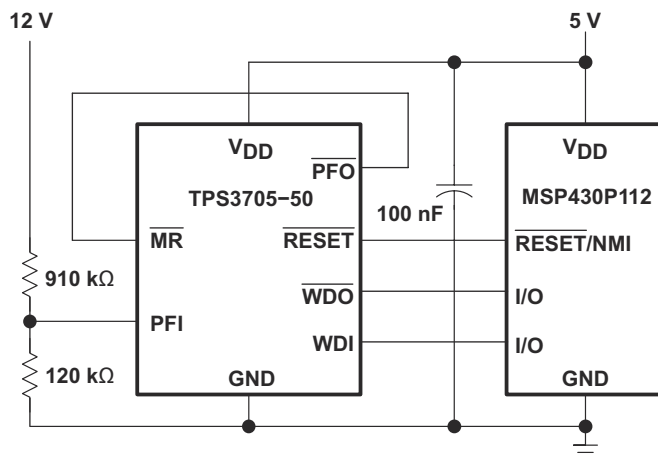

電源投入時には、電源電圧 V_{DD} が 1.1V を上回ると \overline{RESET} ピンがアサートされます。その後、この電源電圧監視 IC が V_{DD} を監視し、 V_{DD} がスレッシュホールド電圧 V_{IT+} を下回っている間は \overline{RESET} ピンをアクティブに維持します。電源電圧がスレッシュホールド電圧 V_{IT-} を下回ると、出力は再びアクティブ (LOW) になります。外付け部品は不要です。このファミリのデバイスはすべて、内部分圧回路により検出スレッシュホールド電圧 V_{IT} が固定値になっています。

この製品ファミリは、2.5V、3V、3.3V、5V の電源電圧用に設計されています。これらの回路は 8 ピンの MSOP パッケージまたは標準の SOIC パッケージで供給されます。TPS370x-xx デバイスは、-40°C～85°C の温度範囲で動作が規定されています。

8 Detailed Description

8.1 Overview

The TPS370x-xx family of supervisors feature an integrated reference and comparator for V_{DD} supervision, an additional power-fail supervisor, and a manual reset input. The TPS3705-xx devices feature a watchdog timer, where the TPS3707-xx devices feature a complimentary RESET output.

8.2 Functional Block Diagram

8.3 Feature Description

8.3.1 Manual Reset Input

The TPS370x-xx devices incorporate a manual reset input, \overline{MR} . A low level at \overline{MR} causes \overline{RESET} to become active.

8.3.2 Power-Fail Comparator

The TPS370x-xx family integrates a power-fail comparator which can be used for low-battery detection, power-fail warning, or for monitoring a power supply other than the main supply.

8.3.3 Watchdog Timer

The TPS3705-xx devices have a watchdog timer that is periodically triggered by a positive or negative transition at WDI. When the supervising system fails to retrigger the watchdog circuit within the timeout interval, $t_{t(out)} = 1.6$ s, \overline{WDO} becomes active. This event also reinitializes the watchdog timer. Leaving WDI unconnected disables the watchdog.

The TPS3707-xx devices do not have the watchdog function, but include a high-level output RESET.

8.4 Device Functional Modes

8.4.1 $V_{DD} < 1.1\text{ V}$

When V_{DD} is less than 1.1 V, the status of the outputs cannot be determined.

8.4.2 $1.1\text{ V} < V_{DD} \leq 2\text{ V}$

When V_{DD} is greater than 1.1 V but less than 2 V, the output states are valid. However, the specifications in [セクション 7.5](#) do not apply.

8.4.3 $2\text{ V} < V_{DD} < 6\text{ V}$

When V_{DD} is greater than 2 V but less than 6 V, the device is within the recommended operating conditions (see [セクション 7.3](#)). See [表 8-1](#), [表 8-2](#), and [表 8-3](#) for corresponding truth tables.

図 9-1. Typical MSP430 Application

9.2.1 Design Requirements

表 9-1 lists the required design parameters for 図 9-1.

表 9-1. Application Parameters

DESIGN PARAMETER	VALUE
Monitored voltage 1	5 V
Monitored voltage 2	12 V

9.2.2 Detailed Design Procedure

To create two voltage monitoring rails, the PFI input can be used along with the MR pin to create a single output. The 5-V monitor is created by selecting a 5-V device option, giving threshold of 4.55 V. The PFI input is configured to any adjustable rail with a voltage divider. Use 式 1 to select resistors.

$$V_{TH} = \frac{R_1 + R_2}{R_2} \times V_{IT-} = \frac{910 \text{ k} + 120 \text{ k}}{120 \text{ k}} \times 1.25 = 10.73 \text{ V} \quad (1)$$

9.2.3 Application Curves

9-2. Normalized Input Threshold Voltage vs Free-Air Temperature at V_{DD}

9-3. Supply Current vs Supply Voltage

10 Power Supply Recommendations

These devices are designed to operate from an input supply with a voltage range from 2 V to 6 V.

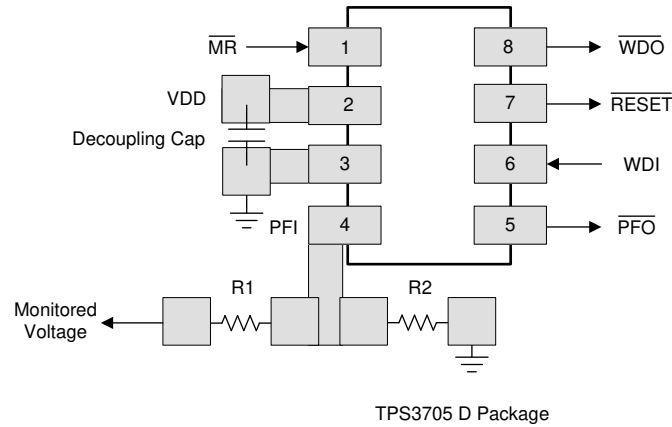

11 Layout

11.1 Layout Guidelines

Place a 0.1- μ F decoupling capacitor as close to the device as possible.

If a resistor divider is used, place the resistors as close to the device as possible to minimize noise coupling.

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

⁽⁵⁾ Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

⁽⁶⁾ Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
