## 1 特長

- 3.3V 電源搭載、USB3.1 Gen1、5Gbps、デュアル・チャンネル・リドライバ
- 超低消費電力アーキテクチャ:
  - アクティブ: 98mA
  - U2、U3: 1.2mA
  - 切断時: 265µA
  - シャットダウン時: 60µA
- 最適なレシーバ・イコライゼーション:
  - 2.5GHz で 3、6、9dB
- 出力ドライバのディエンファシス: 0、3.5、6dB
- 自動的な LFPS ディエンファシス制御により USB 3.1 の認定要件に合致
- ホスト側またはデバイス側の要件なし
- ホットプラグ対応
- 工業用温度範囲: -40°C ~ 85°C (TUSB522PI)
- 商業用温度範囲: 0°C ~ 70°C (TUSB522P)

## 2 アプリケーション

- 携帯電話
- タブレット
- ノート PC
- デスクトップ PC
- ドッキング・ステーション
- バックプレーンとアクティブ・ケーブル

## 3 概要

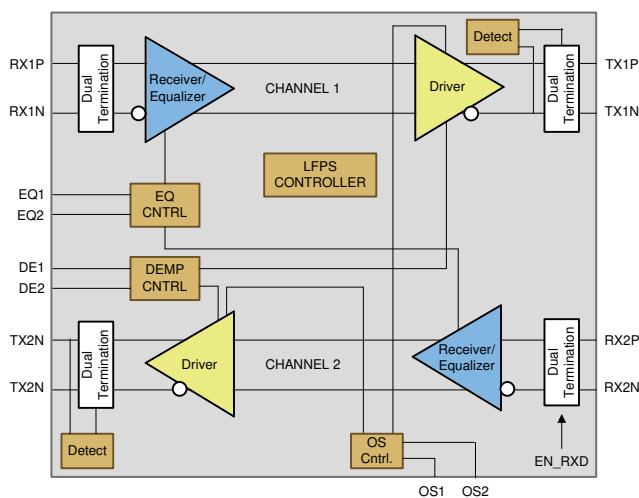

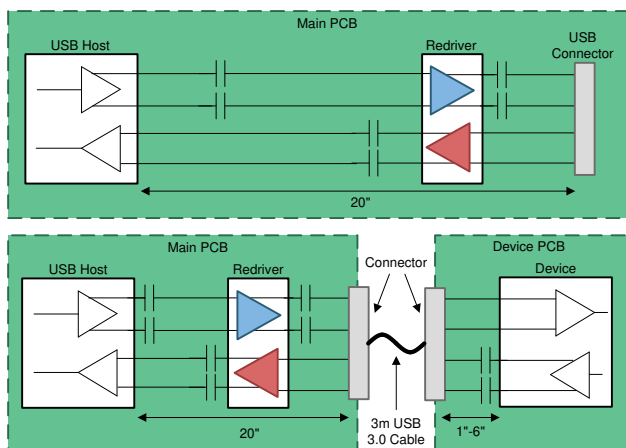

TUSB522P は、5Gbps をサポートする、第 4 世代、デュアル・チャンネル、シングル・レーンの USB 3.1 GEN1 リドライバおよびシグナル・コンディショナです。このデバイスは超低電力アーキテクチャにより 3.3V 電源で動作し、低消費電力を実現します。USB 3.1 の低電力モードをサポートしているため、アイドル時の消費電力をさらに減らすことができます。

デュアル・チャンネル機能により、システムは送信および受信の両方のデータパスで信号の整合性を維持できます。レシーバのイコライゼーションには 3 つのゲイン設定があり、挿入損失やシンボル間干渉によるチャンネルの劣化を克服できます。これらの設定は EQ ピンから制御されます。伝送ライン損失を補償するため、出力ドライバはピン DE によるディエンファシスの構成をサポートしています。さらに、自動的な LFPS ディエンファシス制御により、完全な USB 3.1 準拠が可能になります。これらの設定により、最適な性能が実現され、信号の距離が延長され、TUSB522P を USB 3.1 GEN1 のパス内に柔軟に配置できます。

## 7 Detailed Description

### 7.1 Overview

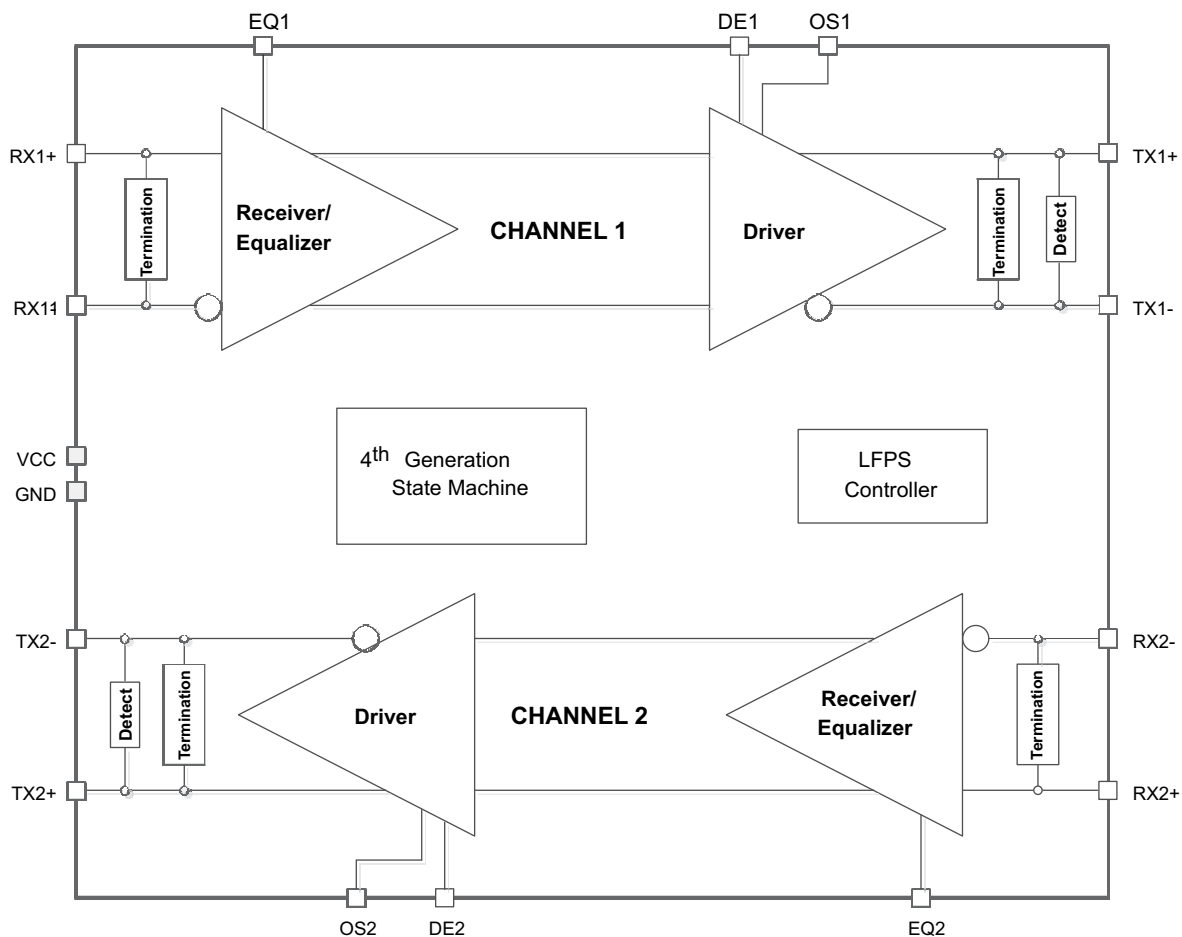

The TUSB522P is designed to overcome channel loss due to inter-symbol interference and crosstalk when 5Gbps USB3.1 GEN1 signals travel across a PCB or cable. The dual channel architecture is a one-chip, low-power solution, extending the possible channel length for transmit and receive data paths in an application. For a Host application, this enables the system to pass both transmitter compliance and receiver jitter tolerance tests.

The re-driver recovers incoming data by applying equalization that compensates for channel loss, and drives out signals with a high differential voltage. Each channel has a receiver equalizer with selectable gain settings. The equalization should be set based on the amount of insertion loss in channel 1 or 2 before the TUSB522P receivers. Likewise, the output drivers support configuration of De-Emphasis. Independent equalization and de-emphasis control for each channel can be set using EQ1/2 and DE1/2 pins.

The TUSB522P advanced state machine makes it transparent to hosts and devices. After power up, the TUSB522P periodically performs receiver detection on the TX pairs. If it detects a USB3.1 GEN1 receiver, the RX termination is enabled, and the TUSB522P is ready to re-drive.

The device ultra-low-power architecture operates at a 3.3-V power supply and achieves Enhanced performance. The automatic LFPS De-Emphasis control further enables the system to be USB3.1 compliant.

### 7.2 Functional Block Diagram

## 7.3 Feature Description

### 7.3.1 Receiver Equalization

The purpose of receiver equalization is to compensate for channel insertion loss and inter-symbol interference in the system before the input of the TUSB522P. The receiver overcomes these losses by attenuating the low frequency components of the signals with respect to the high frequency components. The proper gain setting should be selected to match the channel insertion loss before the input of the TUSB522P receivers. The gain setting may differ for channel 1 and channel 2.

### 7.3.2 De-Emphasis Control and Output Swing

The differential driver output provides selectable de-emphasis and output swing control in order to achieve USB3.1 compliance. The TUSB522P offers a unique way to adjust output de-emphasis and transmitter swing based on the OS1/2 and DE1/2 pins. The level of de-emphasis required in the system depends on the channel length after the output of the re-driver. The output swing and de-emphasis levels may differ for channel 1 and channel 2.

図 7-1. Transmitter Differential Voltage, OS = Floating

### 7.3.3 Automatic LFPS Detection

The TUSB522P features an intelligent low frequency periodic signaling (LFPS) controller. The controller senses the low frequency signals and automatically disables the driver de-emphasis, for full USB3.1 compliance.

## 7.4 Device Functional Modes

### 7.4.1 Device Configuration

**表 7-1. Control Pin Settings (Typical Values)**

PIN	DESCRIPTION	LOGIC STATE	TYP	UNITS
EQ1/EQ2	Receiver equalization amount	Low	3	dB
		Floating	6	dB
		High	9	dB
OS1/OS2	Transmit output swing amplitude for the transition bit	Low	0.9	Vpp
		High	1.1	Vpp
DE1/DE2	Transmit de-emphasis amount	Low	0	dB
		Floating	-3.5	dB
		High	-6.2	dB

### 7.4.2 Power Modes

The TUSB522P has 3 primary power modes:

#### 7.4.2.1 U0 Mode (Active Power Mode)

During active power mode, U0, the device is transmitting USB SS data or USB LFPS signaling. The U0 mode is the highest power state of the TUSB522P. Anytime super-speed traffic is being received, the TUSB522P remains in this mode.

#### 7.4.2.2 U2/U3 (Low Power Mode)

While in this mode, the TUSB522P periodically performs far-end receiver detection.

#### 7.4.2.3 Disconnect Mode - RX Detect

In this state, the TUSB522P periodically checks for far-end receiver termination on both TX. Upon detection of the far-end receiver's termination on both ports, the TUSB522P will transition to U0 mode.

#### 7.4.2.4 Shutdown Mode

Shutdown mode is entered when the EN\_RXD pin is driven low. This is lowest power setting for the device.

## 8 Application and Implementation

### 注

以下のアプリケーション情報は、TI の製品仕様に含まれるものではなく、TI ではその正確性または完全性を保証いたしません。個々の目的に対する製品の適合性については、お客様の責任で判断していただくこととなります。お客様は自身の設計実装を検証しテストすることで、システムの機能を確認する必要があります。

### 8.1 Application Information

The TUSB522P is a dual-channel single-lane re-driver and signal conditioner designed to compensate for ISI jitter caused by attenuation through passive mediums such as traces or cables. The TUSB522P has two independent channels to allow optimization in both upstream and downstream directions through three EQ and six De-Emphasis settings.

### 8.2 Typical Application

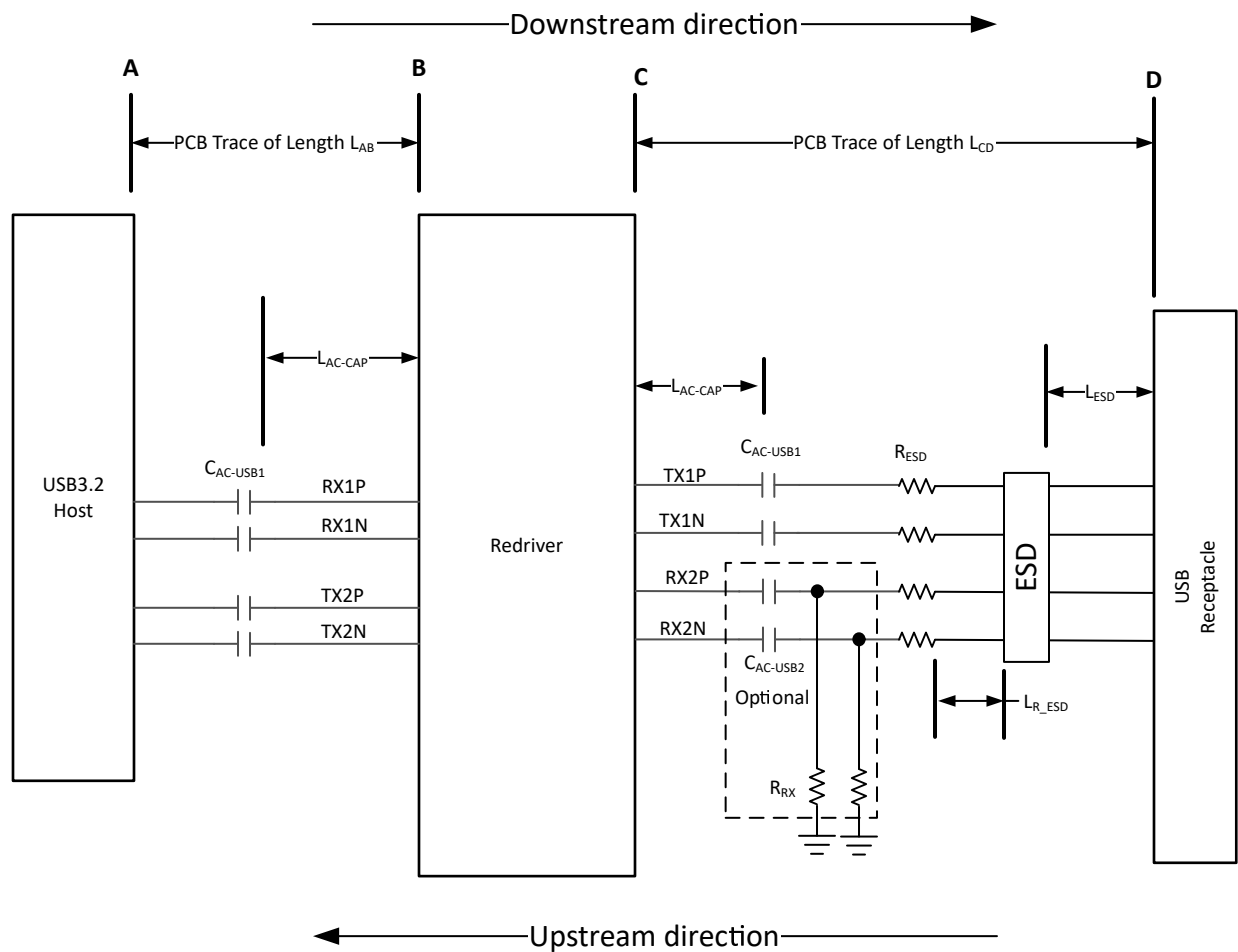

図 8-1. Embedded Host Application

The  $C_{AC-USB1}$  and  $C_{AC-USB2}$  should be placed between ESD and USB receptacle for systems designing for short to VBUS protection.

## 8.2.1 Design Requirements

For this design example, use the parameters provided in 表 8-1.

**表 8-1. Design Parameters**

PARAMETER	VALUE
Pre-channel A to B PCB trace length <sup>(1)</sup> , $L_{AB}$ .	1 inches $\leq L_{AB} \leq$ 20 inches
Post-channel C to D PCB trace length <sup>(1)</sup> , $L_{CD}$ .	$\leq$ 6 inches
Minimum distance of the AC capacitors from TUSB522P, $L_{AC-CAP}$	0.25 inches
Maximum distance of ESD component from the USB receptacle, $L_{ESD}$	0.6 inches
Maximum distance of series resistor ( $R_{ESD}$ ) from ESD component, $L_{R\_ESD}$ .	0.25 inches
$C_{AC-USB1}$ AC-coupling capacitor (75 nF to 265 nF)	100 nF
$C_{AC-USB2}$ AC-coupling capacitor (297 nF to 363 nF)	Options: <ul style="list-style-type: none"> <li>• RX1 or RX2 are DC-coupled to USB receptacle</li> <li>• 330 nF AC-couple with <math>R_{RX}</math> resistor</li> </ul>
Optional $R_{RX}$ resistor (220-k $\Omega \pm$ 5%)	Not used
Optional $R_{ESD}$ (0- $\Omega$ to 2.2- $\Omega$ )	Not used
$V_{CC}$ supply (3-V to 3.6-V)	3.3-V
EQ1 for RX1P/N (3, 6, or 9dB)	9 dB (EQ1 = High)
De-Emphasis 2 for TX2P/N (0, -3.5, and -6.2 dB)	-6.2 dB (OS2 = Low, DE2 = High)
EQ2 for RX2P/N (3, 6, or 9 dB)	6 dB (EQ2 = Floating)
De-Emphasis 1 for TX1P/N (0, -3.5, and -6.2 dB)	-3.5 dB (OS1 = Low, DE1 = Floating)
Output Swing 1 (0.9 or 1.1 Vppd)	900 mV (OS1 = Low)
Output Swing 2 (0.9 or 1.1 Vppd)	900 mV (OS2 = Low)

(1) Maximum trace length assumes an insertion loss of 0.2 dB/inch/GHz. If insertion loss is more than 0.2 dB/inch/GHz, then maximum trace length must be reduced accordingly.

## 8.2.2 Detailed Design Procedure

The TUSB522P differential receivers and transmitters have internal BIAS and termination. Due to this, the TUSB522P must be connected to the USB Host and receptacle through ac-coupling capacitors. In this example, as depicted in 図 8-2, 100 nF capacitors are placed on TX2P, TX2N, RX1P, RX1N, TX1P and TX1N. No ac-coupling capacitors are placed on the RX2P and RX2N pins because it is assumed the device downstream of the TUSB522P will have ac-coupling capacitors on its transmitter as defined by the USB 3.1 specification. The system designer may desire to support short to VBUS protection. If this is the case, then a 330 nF ac-coupling capacitor should be placed on RX2P/N pins.

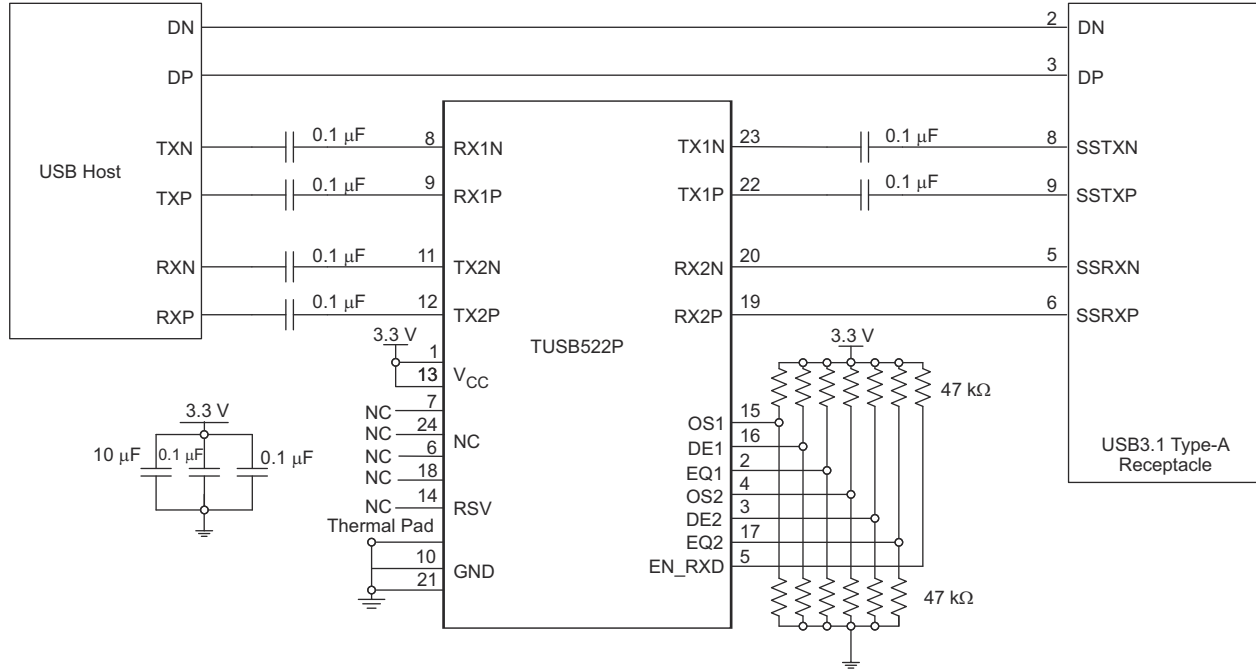

図 8-2. Embedded Host Application Schematic

### 8.2.2.1 ESD Protection

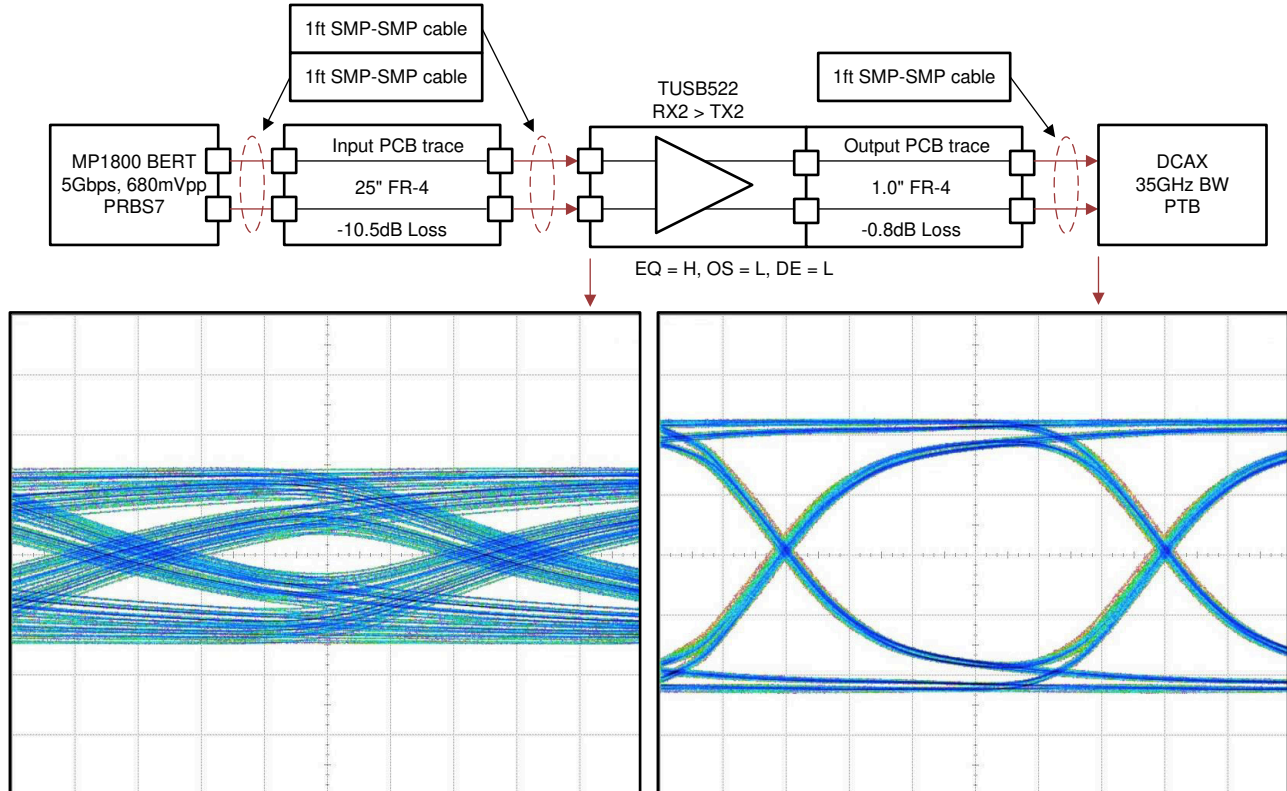

It may be necessary to incorporate an ESD component to protect the TUSB522P from electrostatic discharge (ESD). It is recommended that the ESD protection component has working peak voltage of  $\geq 1.3$  V, a breakdown voltage of  $\geq 2.3$  V, and a clamp voltage of  $\leq 4.0$  V. A clamp voltage greater than 4.0 V may require a  $R_{ESD}$  on each differential pin. The ESD component should be placed near the USB connector.

表 8-2. Recommended ESD Protection Component

Manufacturer	Part Number	Required $R_{ESD}$ to pass IEC 61000-4-2 Contact $\pm 8$ -kV
Nexperia	PUSB3FR4	2.2- $\Omega$
Nexperia	PESD2V8Y1BSF	2.2- $\Omega$

## 8.3 Power Supply Recommendations

The TUSB522P is designed to operate with a 3.3-V power supply. Levels above those listed in the *Absolute Ratings* table should not be used. If using a higher voltage system power supply, a voltage regulator can be used to step down to 3.3 V. Decoupling capacitors should be used to reduce noise and improve power supply integrity. A 0.1- $\mu$ F capacitor should be used on each power pin.

## 8.4 Layout

### 8.4.1 Layout Guidelines

- RXP/N and TXP/N pairs should be routed with controlled 90- $\Omega$  differential impedance ( $\pm 15\%$ ).
- Keep away from other high speed signals.
- Intra-pair routing should be kept to within 2mils.
- Length matching should be near the location of mismatch.
- Each pair should be separated at least by 3 times the signal trace width.
- The use of bends in differential traces should be kept to a minimum. When bends are used, the number of left and right bends should be as equal as possible and the angle of the bend should be  $\geq 135$  degrees. This will minimize any length mismatch causes by the bends and therefore minimize the impact bends have on EMI.
- Route all differential pairs on the same of layer.
- The number of VIAS should be kept to a minimum. It is recommended to keep the VIAS count to 2 or less.
- Keep traces on layers adjacent to ground plane.
- Do not route differential pairs over any plane split.
- Adding test points will cause impedance discontinuity; and will therefore, negatively impact signal performance. If test points are used, they should be placed in series and symmetrically. They must not be placed in a manner that causes a stub on the differential pair.
- The 100-nF capacitors on the TXP and SSTXN nets must be placed close to the USB connector (Type A, Type B, and so forth).

- The ESD and EMI protection devices (if used) must also be placed as close as possible to the USB connector.
- Place voltage regulators as far away as possible from the differential pairs.
- To minimize crosstalk, TI recommends keeping high-speed signals away from each other. Each pair must be separated by at least 5 times the signal trace width. Separating with ground also helps minimize crosstalk.

### 9.4 静電気放電に関する注意事項

この IC は、ESD によって破損する可能性があります。テキサス・インスツルメンツは、IC を取り扱う際には常に適切な注意を払うことを推奨します。正しい取り扱いおよび設置手順に従わない場合、デバイスを破損するおそれがあります。

ESD による破損は、わずかな性能低下からデバイスの完全な故障まで多岐にわたります。精密な IC の場合、パラメータがわずかに変化するだけで公表されている仕様から外れる可能性があるため、破損が発生しやすくなっています。

## 10 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
