

# TUSB564-Q1 車載用 USB Type-C® DP Alt モード、8.1Gbps、シンクサイド リニア リドライバ クロスポイント スイッチ

## 1 特長

- USB Type-C® クロスポイント スイッチで、次の仕様をサポート
  - USB 3.2 5Gbps + 2 つの DP 1.4 レーン
  - 4 つの DP 1.4 レーン
- USB 3.2 で最大 5Gbps
- DisplayPort™ 1.4 で最大 8.1Gbps (HBR3)
- VESA® DisplayPort™ Alt モードの UFP\_D リドライビング クロスポイント スイッチで、C、D、E のピン割り当てをサポート
- 超低消費電力アーキテクチャ
- 最大 11.6dB のイコライゼーション付きのリニア リドライバ
- DisplayPort™ リンクトレーニングに対して透過的
- GPIO または I<sup>2</sup>C により設定可能
- ホットプラグ対応
- 車載グレード 2 の温度範囲: -40°C~105°C
- パッケージ: 5mm × 7mm、0.5mm ピッチの VQFN

## 2 アプリケーション

- 車載用インフォテインメントおよびクラスタ
- 後部座席用エンターテインメント
- 車載ヘッド ユニット

## 3 概要

TUSB564-Q1 は VESA® DisplayPort™ Alt モードの USB-C® リドライビング スイッチで、USB 3.2 で 5Gbps まで、DisplayPort 1.4 で 8.1Gbps までの、上流向きポート (シンク) のデータ レートをサポートします。このデバイスは、USB Type-C® 規格の VESA® DisplayPort™ Alt モードで、UFP\_D ピンの割り当て C、D、E に使用されます。

TUSB564-Q1 には、いくつかのレベルの受信リニア イコライゼーションがあり、ケーブルおよび基板配線での損失によるシンボル間干渉 (ISI) を補償できます。TUSB564-Q1 は単一の 3.3V 電源で動作し、車載グレード 2 の温度範囲に対応しています。

### パッケージ情報

部品番号	パッケージ <sup>(1)</sup>	パッケージ サイズ <sup>(2)</sup>
TUSB564-Q1	RGF (VQFN, 40)	7mm × 5 mm

- (1) 供給されているすべてのパッケージについては、[セクション 12](#) を参照してください。
- (2) パッケージ サイズ (長さ × 幅) は公称値であり、該当する場合はピンも含まれます。

## 4 Pin Configuration and Functions

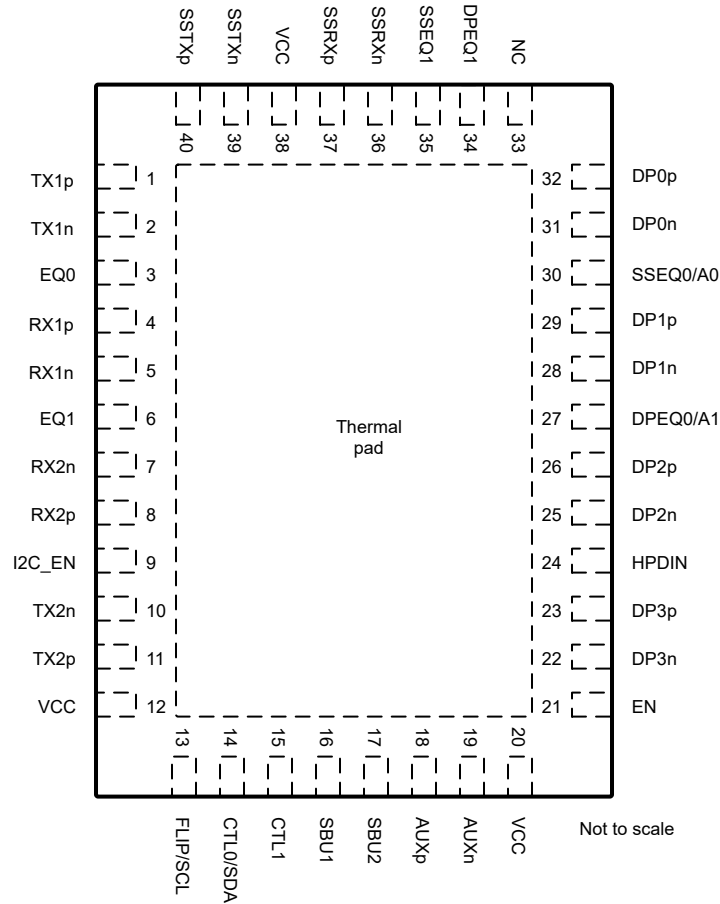

図 4-1. RGF Package, 40-Pin (VQFN) (Top View)

表 4-1. Pin Functions

PIN		TYPE <sup>(1)</sup>	DESCRIPTION
NAME	NO.		
DP0p	32	Diff O	DP differential positive output for DisplayPort Lane 0.
DP0n	31	Diff O	DP differential negative output for DisplayPort Lane 0.
DP1p	29	Diff O	DP differential positive output for DisplayPort Lane 1.
DP1n	28	Diff O	DP differential negative output for DisplayPort Lane 1.
DP2p	26	Diff O	DP differential positive output for DisplayPort Lane 2.
DP2n	25	Diff O	DP differential negative output for DisplayPort Lane 2.
DP3p	23	Diff O	DP differential positive output for DisplayPort Lane 3.
DP3n	22	Diff O	DP differential negative output for DisplayPort Lane 3.
TX1n	2	Diff I/O	Differential negative input for DisplayPort or differential negative output for USB3.2 upstream facing port.
TX1p	1	Diff I/O	Differential positive input for DisplayPort or differential positive output for USB3.2 upstream facing port.
RX1n	5	Diff I	Differential negative input for DisplayPort or USB3 upstream facing port.
RX1p	4	Diff I	Differential positive input for DisplayPort or USB3 upstream facing port.
RX2p	8	Diff I	Differential positive input for DisplayPort or USB3 upstream facing port.
RX2n	7	Diff I	Differential negative input for DisplayPort or USB3 upstream facing port.

表 4-1. Pin Functions (続き)

PIN		TYPE <sup>(1)</sup>	DESCRIPTION
NAME	NO.		
TX2p	11	Diff I/O	Differential positive input for DisplayPort or differential positive output for USB3 upstream Facing port.
TX2n	10	Diff I/O	Differential negative input for DisplayPort or differential negative output for USB3 upstream Facing port.
SSTXp	40	Diff I	Differential positive input for USB3 downstream facing port.
SSTXn	39	Diff I	Differential negative input for USB3 downstream facing port.
SSRXp	37	Diff O	Differential positive output for USB3 downstream facing port.
SSRXn	36	Diff O	Differential negative output for USB3 downstream facing port.
EQ1	6	4 Level I	This pin along with EQ0 sets the USB receiver equalizer gain for upstream facing RX1 and RX2 when USB used. Up to 11dB of EQ available.
EQ0	3	4 Level I	This pin along with EQ1 sets the USB receiver equalizer gain for upstream facing RX1 and RX2 when USB used. Up to 11dB of EQ available.
EN	21	2 Level I (PD)	Device Enable. For normal operation pull up this pin to 3.3V through a 10k to 50kΩ resistor.
HPDIN	24	2 Level I	Hot Plug Detect. This pin is an input for Hot Plug Detect received from DisplayPort sink. When HPDIN is Low for greater than 2ms, all DisplayPort lanes are disabled while the AUX to SBU switch remains closed.
I2C_EN	9	4 Level I	I <sup>2</sup> C Programming Mode or GPIO Programming Select. I <sup>2</sup> C is only disabled when this pin is "0". 0 = GPIO mode (I <sup>2</sup> C disabled) R = TI Test Mode (I <sup>2</sup> C enabled at 3.3V) F = I <sup>2</sup> C enabled at 1.8 V 1 = I <sup>2</sup> C enabled at 3.3V.
SBU1	16	I/O, CMOS	SBU1. DC couple this pin to the SBU1 pin on the Type-C receptacle. A 2MΩ resistor to GND is also recommended.
SBU2	17	I/O, CMOS	SBU2. DC couple this pin to the SBU2 pin on the Type-C receptacle. A 2MΩ resistor to GND is also recommended.
AUXp	18	I/O, CMOS	AUXp. DisplayPort AUX positive I/O connected to the DisplayPort sink through a AC-coupling capacitor. In addition to AC-coupling capacitor, this pin also requires a 1M resistor to DP_PWR (3.3V). This pin along with AUXN is used by the TUSB564-Q1 for AUX snooping and is routed to SBU1/2 based on the orientation of the Type-C.
AUXn	19	I/O, CMOS	AUXn. DisplayPort AUX negative I/O connected to the DisplayPort sink through a AC-coupling capacitor. In addition to AC-coupling capacitor, this pin also requires a 1M resistor to GND. This pin along with AUXP is used by the TUSB564-Q1 for AUX snooping and is routed to SBU1/2 based on the orientation of the Type-C.
DPEQ1	34	4 Level I	DisplayPort Receiver EQ. The DPEQ1 and DPEQ0 pins select the DisplayPort receiver equalization gain.
DPEQ0/A1	27	4 Level I	DisplayPort Receiver EQ. The DPEQ0 and DPEQ1 pins select the DisplayPort receiver equalization gain. When I2C_EN ≠ "0", the DPEQ0 pin also sets the TUSB564-Q1 I <sup>2</sup> C address.
SSEQ1	35	4 Level I	The SSEQ1 and SSEQ0 pins set the USB receiver equalizer gain for downstream facing SSTXP/N.
SSEQ0/A0	30	4 Level I	The SSEQ0 and SSEQ1 pins set the USB receiver equalizer gain for downstream facing SSTXP/N. When I2C_EN ≠ "0", the SSEQ0 pin also sets the TUSB564-Q1 I <sup>2</sup> C address. If I2C_EN = "F", then the SSEQ0 pin must be set to "F" or "0".
FLIP/SCL	13	2 Level I (Failsafe) (PD)	When I2C_EN = "0" this pin is Flip control, otherwise this pin is I <sup>2</sup> C clock. When used for the I <sup>2</sup> C clock, pull up to the VCC I <sup>2</sup> C supply on the I <sup>2</sup> C controller through an external resistor.
CTL0/SDA	14	2 Level I (Failsafe) (PD)	When I2C_EN = "0" this pin is USB3 switch control, otherwise this pin is I <sup>2</sup> C data. When used for I <sup>2</sup> C data, pull up to the VCC I <sup>2</sup> C supply on the I <sup>2</sup> C controller through an external resistor.

**表 4-1. Pin Functions (続き)**

PIN		TYPE <sup>(1)</sup>	DESCRIPTION
NAME	NO.		
CTL1	15	2 Level I (Failsafe) (PD)	DP Alt mode Switch Control Pin. When I2C_EN = "0", this pin can enable or disable DisplayPort functionality. Otherwise, when I2C_EN ≠ "0", DisplayPort functionality is enabled and disabled through I <sup>2</sup> C registers. L = DisplayPort Disabled. H = DisplayPort Enabled.
VCC	12	P	3.3V Power Supply
VCC	20	P	3.3V Power Supply
VCC	38	P	3.3V Power Supply
NC	33	NC	No connect pin. Leave open.
GND	Thermal Pad	G	Ground

(1) I = input, O = output, Diff = differential, P = power, NC = no connection, G = ground

## 5 Specifications

### 5.1 Absolute Maximum Ratings

over operating free-air temperature and voltage range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
V <sub>CC</sub>	Supply voltage range	-0.3	4	V
V <sub>IN_DIFF</sub>	Differential voltage at differential inputs		±2.5	V
V <sub>IN_SE</sub>	Input voltage at differential inputs	-0.5	4	V
V <sub>IN_CMOS</sub>	Input voltage at CMOS inputs	-0.3	4	V
T <sub>J</sub>	Junction temperature		125	°C
T <sub>STG</sub>	Storage temperature	-65	150	°C

- (1) Operation outside the *Absolute Maximum Ratings* may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under *Recommended Operating Conditions*. If used outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

### 5.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human body model (HBM), per AEC Q100-002 <sup>(1)</sup> , all pins	±4000	V
		Charged device model (CDM), per AEC Q100-011, all pins	±1500	

- (1) AEC Q100-002 indicates that HBM stressing must be in accordance with the ANSI/ESDA/JEDEC JS-001 specification.

### 5.3 Recommended Operating Conditions

over operating free-air temperature and voltage range (unless otherwise noted)

		MIN	NOM	MAX	UNIT
V <sub>CC</sub>	Supply voltage	3	3.3	3.6	V
V <sub>CC_RAMP</sub>	Power supply ramp	0.1		100	ms
V <sub>I2C</sub>	Supply that external resistors on SDA and SCL are pulled up too	1.7		3.6	V
V <sub>PSN</sub>	Power supply noise on VCC			100	mV
T <sub>A</sub>	Ambient temperature	-40		105	°C
T <sub>PCB</sub>	PCB temperature (1mm away from the device)	-40		112	°C

### 5.4 Thermal Information

	THERMAL METRIC <sup>(1)</sup>	Device	UNIT
		RGF (VQFN)	
		40 PINS	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	29.3	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	18.6	°C/W
R <sub>θJB</sub>	Junction-to-board thermal resistance	10.8	°C/W
Ψ <sub>JT</sub>	Junction-to-top characterization parameter	0.3	°C/W
Ψ <sub>JB</sub>	Junction-to-board characterization parameter	10.7	°C/W
R <sub>θJC(bot)</sub>	Junction-to-case (bottom) thermal resistance	3.5	°C/W

- (1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application note.

## 5.5 Electrical Characteristics

over operating free-air temperature and voltage range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>Power</b>						
P <sub>CC-ACTIVE-USB</sub>	Average active power in USB-only mode while in U0	CTL1 = L; CTL0 = H; Link in U0 at 5Gbps;		340		mW
P <sub>CC-ACTIVE-USB-DP</sub>	Average active power in USB + 2 lane DP mode	CTL1 = H; CTL0 = H; USB in U0 at 5Gbps; DP at 8.1Gbps;		670		mW
P <sub>CC-ACTIVE-DP</sub>	Average active power in 4 lane DP mode	CTL1 = H; CTL0 = L; Four DP lanes at 8.1Gbps		640		mW
P <sub>CC-NC-USB</sub>	Average power in USB mode while in disconnect state.	CTL1 = L; CTL0 = H; No USB device detected;		2.5		mW
P <sub>CC-U2U3</sub>	Average power in USB mode while in U2/U3 state	CTL1 = L; CTL0 = H; Link in U2 or U3;		2.5		mW
P <sub>CC-SHUTDOWN</sub>	Average power in shutdown mode.	CTL1 = L; CTL0 = L; I2C_EN = "0";		0.7		mW
<b>4-State CMOS Inputs(EQ[1:0], SSEQ[1:0], DPEQ[1:0], I2C_EN)</b>						
I <sub>IH</sub>	High-level input current	V <sub>CC</sub> = 3.6V; V <sub>IN</sub> = 3.6V	20		80	μA
I <sub>IL</sub>	Low-level input current	V <sub>CC</sub> = 3.6V; V <sub>IN</sub> = 0V	-160		-40	μA
4-Level V <sub>TH</sub>	Threshold 0 / R	V <sub>CC</sub> = 3.3V		0.59		V
	Threshold R/ Float	V <sub>CC</sub> = 3.3V		1.65		V
	Threshold Float / 1	V <sub>CC</sub> = 3.3V		2.7		V
R <sub>PU</sub>	Internal pullup resistance			45		kΩ
R <sub>PD</sub>	Internal pulldown resistance			95		kΩ
<b>2-State CMOS Input (EN, FLIP, CTL0, CTL1, HPDIN) CTL1, CTL0 and FLIP are Failsafe</b>						
V <sub>IH</sub>	High-level input voltage		2.2		3.6	V
V <sub>IL</sub>	Low-level input voltage		0		0.8	V
R <sub>PD</sub>	Internal pull-down resistance for FLIP, CTL0, and EN.			500		kΩ
R <sub>PD-CTL1</sub>	Internal pull-down resistance for CTL1			395		kΩ
I <sub>IH-EN</sub>	High-level input current for EN pin	V <sub>IN</sub> = 3.6V	4		12	μA
I <sub>IL-EN</sub>	Low-level input current for EN pin	V <sub>IN</sub> = GND, V <sub>CC</sub> = 3.6V	-1		1	μA
I <sub>IH-FLIP</sub>	High-level input current for FLIP pin	V <sub>IN</sub> = 3.6V	4		12	μA
I <sub>IL-FLIP</sub>	Low-level input current for FLIP pin	V <sub>IN</sub> = GND, V <sub>CC</sub> = 3.6V	-1		1	μA
I <sub>IH-CTL0</sub>	High-level input current for CTL0 pin	V <sub>IN</sub> = 3.6V	4		12	μA
I <sub>IL-CTL0</sub>	Low-level input current for CTL0 pin	V <sub>IN</sub> = GND, V <sub>CC</sub> = 3.6V	-1		1	μA
I <sub>IH-CTL1</sub>	High-level input current for CTL1 pin	V <sub>IN</sub> = 3.6V	4		12	μA
I <sub>IL-CTL1</sub>	Low-level input current for CTL1 pin	V <sub>IN</sub> = GND, V <sub>CC</sub> = 3.6V	-1		1	μA
I <sub>IH-HPDIN</sub>	High-level input current for HPD pin	V <sub>IN</sub> = 3.6V	0.5		5	μA
I <sub>IL-HPDIN</sub>	Low-level input current for HPD pin	V <sub>IN</sub> = GND, V <sub>CC</sub> = 3.6V	-1		1	μA
<b>I2C Control Pins SCL, SDA</b>						
V <sub>IH</sub>	High-level input voltage	I2C_EN = "1" or "R" (3.3V I2C levels)	2.2		3.6	V
V <sub>IL</sub>	Low-level input voltage	I2C_EN = "1" or "R" (3.3V I2C levels)	0		0.8	V
V <sub>IH</sub>	High-level input voltage	I2C_EN = "F" (1.8V I2C levels)	1.2		3.6	V
V <sub>IL</sub>	Low-level input voltage	I2C_EN = "F" (1.8V I2C levels)	0		0.4	V
V <sub>OL</sub>	Low-level output voltage	I2C_EN ! = "0"; I <sub>OL</sub> = 3mA	0		0.4	V

## 5.5 Electrical Characteristics (続き)

over operating free-air temperature and voltage range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
$I_{OL}$	Low-level output current	I2C_EN ! = "0"; $V_{OL} = 0.4V$	20			mA
$I_{i\_I2C}$	Input current on SDA pin	$0.1 \times V_{I2C} < \text{Input voltage} < 3.3V$	-10		10	$\mu A$
$C_{i\_I2C}$	Input capacitance				10	pF
<b>USB Differential Receiver (RX1P/N, RX2P/N, SSTXP/N)</b>						
$V_{RX-DIFF-PP}$	Input differential peak-peak voltage swing linear dynamic range	AC-coupled differential peak-to-peak signal measured post CTLE through a reference channel		1200		mVppd
$V_{RX-DC-CM}$	Common-mode voltage bias in the receiver (DC)			0		V
$R_{RX-DIFF-DC}$	Differential input impedance (DC)	Present after a USB3 device is detected on TXP/TXN	72		120	$\Omega$
$R_{RX-CM-DC}$	Receiver DC common mode impedance	Present after a USB3 device is detected on TXP/TXN	18		30	$\Omega$
$Z_{RX-HIGH-IMP-DC-POS}$	Common-mode input impedance with termination disabled (DC)	Present when no USB3 device is detected on TXP/TXN. Measured over the range of 0V to 500mV with respect to GND.	25			k $\Omega$
$V_{SIGNAL-DET-DIFF-PP}$	Input differential peak-to-peak signal detect assert level	At 5Gbps, No loss and bit rate PRBS7 pattern		80		mVppd
$V_{RX-IDLE-DET-DIFF-PP}$	Input differential peak-to-peak signal detect de-assert level	At 5Gbps, No loss and bit rate PRBS7 pattern		60		mVppd
$V_{RX-LFPS-DET-DIFF-PP}$	Low-frequency periodic signaling (LFPS) detect threshold	$25^{\circ}C \leq T_A \leq 105^{\circ}C$ ; Below the minimum is squelched. Tested at 25MHz and 300mVppd VIN.	100		300	mVppd
$RL_{RX-DIFF}$	Differential return loss	50MHz to 1.25GHz at 90 $\Omega$ ; Lowest EQ setting; FLIP = L;		-23		dB
$RL_{RX-DIFF}$	Differential return loss	2.5GHz at 90 $\Omega$ ; Lowest EQ setting; FLIP = L;		-22		dB
$RL_{RX-CM}$	Common-mode return loss	50MHz to 2.5GHz at 90 $\Omega$ ; Lowest EQ setting; FLIP = L;		-13		dB
$EQ_{SS}$	Receiver equalization for RX1/2 receivers at maximum setting	At 2.5GHz; FLIP = L;		11.6		dB
$EQ_{SS}$	Receiver equalization for SSTX receiver at maximum setting	At 2.5GHz; FLIP = L;		10		dB
<b>USB Differential Transmitter (TX1P/N, TX2P/N, SSRXP/N)</b>						
$V_{TX-DIFF-PP}$	Transmitter dynamic differential voltage swing range.			1300		mVppd
$V_{TX-RCV-DETECT}$	Amount of voltage change allowed during Receiver Detection	At 3.3V			600	mV
$V_{TX-CM-IDLE-DELTA}$	Transmitter idle common-mode voltage change while in U2/U3 and not actively transmitting LFPS	Measured at the connector side of the AC-coupling capacitor with 50 $\Omega$ load	-600		600	mV
$V_{TX-DC-CM}$	Common-mode voltage bias in the transmitter (DC)	In U0;	1.5		2.1	V
$V_{TX-CM-AC-PP-ACTIVE}$	TX AC common-mode voltage active	At 3.3V; Maximum mismatch from Txp+Txn for both time and amplitude			100	mVpp
$V_{TX-IDLE-DIFF-AC-PP}$	AC electrical idle differential peak-to-peak output voltage	At package pins after high-pass filter (HPF) to remove DC component; HPF = 1/LPF; No AC or DC signals are applied at RX terminals;	0		10	mV

## 5.5 Electrical Characteristics (続き)

over operating free-air temperature and voltage range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
V <sub>TX-IDLE-DIFF-DC</sub>	DC electrical idle differential output voltage	At package pins after low-pass filter (LPF) to remove AC component; LPF = 1/HPF; No AC or DC signals are applied at RX terminals;	0		10	mV
V <sub>TX-CM-DC-ACTIVE-IDLE-DELTA</sub>	Absolute DC common-mode voltage between U1 and U0	At package pin			200	mV
R <sub>TX-DIFF</sub>	Differential impedance of the driver		75		120	Ω
R <sub>TX-CM</sub>	Common-mode impedance of the driver	Measured with respect to AC ground over 0V to 500mV	18		30	Ω
C <sub>AC-COUPLING</sub>	External AC-coupling capacitor		75		265	nF
I <sub>TX-SHORT</sub>	TX short-circuit current	TX+/- shorted to GND			67	mA
RL <sub>TX-DIFF</sub>	Differential return loss (SDD22)	50MHz to 1.25GHz at 90Ω; Lowest EQ setting; FLIP = L;		-25		dB
RL <sub>TX-DIFF-2.5G</sub>	Differential return loss (SDD22)	2.5GHz at 90Ω; Lowest EQ setting; FLIP = L;		-12		dB
RL <sub>TX-CM</sub>	Common-mode return loss (SCC22)	50MHz to 2.5GHz at 90Ω; Lowest EQ setting; FLIP = L;		-14		dB
<b>AC Electrical Characteristics</b>						
Crosstalk	Differential crosstalk between TX and RX signal pairs	At 2.5GHz; FLIP = L;		-45		dB
G <sub>LF</sub>	Low-frequency voltage gain.	At 100MHz, 600mVpp V <sub>ID</sub>	-0.25	0.6	1.5	dB
G <sub>LF_LFPS_TX1/2</sub>	Low-frequency voltage gain for SSTX → TX1/TX2 path	At 10MHz to 50MHz sine wave; 1.0Vpp V <sub>ID</sub> ; EQ = 0; FLIP = 0 and 1;	-0.5	0.8	1.6	dB
CP <sub>1 dB-LF</sub>	Low-frequency -1dB compression point	At 100MHz, 200mVpp < V <sub>ID</sub> < 2000mVpp		1000		mVpp
CP <sub>1 dB-HF</sub>	High-frequency -1dB compression point	At 2.5GHz, 200mVpp < V <sub>ID</sub> < 2000mVpp		1000		mVpp
D <sub>J_5G</sub>	TX output deterministic jitter	200mVpp < V <sub>ID</sub> < 2000mVpp, PRBS7, 5Gbps, 10dB pre-channel and 1dB post-channel, Optimal EQ setting		0.025		Upp
D <sub>J_8.1G</sub>	TX output deterministic jitter	200mVpp < V <sub>ID</sub> < 2000mVpp, PRBS7, 8.1Gbps, 10dB pre-channel and 1dB post-channel, Optimal EQ setting		0.03		Upp
<b>DisplayPort Receiver (TX1P/N, TX2P/N, RX1P/N, RX2P/N)</b>						
V <sub>ID_PP</sub>	Peak-to-peak input differential dynamic voltage range			1400		mVppd
V <sub>IC</sub>	Input common-mode voltage			0		V
C <sub>AC</sub>	External AC-coupling capacitor		75		265	nF
EQ <sub>DP</sub>	Receiver equalizer at maximum setting	At 4.05GHz;		13.7		dB
d <sub>R</sub>	Data rate	HBR3			8.1	Gbps
R <sub>tx</sub>	Input termination resistance		80	100	120	Ω
<b>DisplayPort Transmitter (DP[3:0]P/N)</b>						
V <sub>TX-DIFFPP</sub>	VOD dynamic range			1300		mVppd
I <sub>TX-SHORT</sub>	TX short-circuit current	TX+/- shorted to GND			67	mA
V <sub>DPTX-DC-CM</sub>	Common-mode voltage bias in the transmitter (DC)		1.5		2.2	V
R <sub>DPTX</sub>	Differential impedance of the driver		75		120	Ω
<b>AUXP/N and SBU1/2</b>						

## 5.5 Electrical Characteristics (続き)

over operating free-air temperature and voltage range (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
R <sub>ON</sub>	Output ON resistance	V <sub>CC</sub> = 3.3V; V <sub>IN</sub> = 0V to 0.4V for AUXP; V <sub>IN</sub> = 2.7V to 3.6V for AUXN		5	10	Ω
R <sub>ON-MISMATCH</sub>	ΔON resistance mismatch within pair	V <sub>CC</sub> = 3.3V; V <sub>IN</sub> = 0V to 0.4V for AUXP; V <sub>IN</sub> = 2.7V to 3.6V for AUXN			1.5	Ω

## 7 Detailed Description

### 7.1 Overview

The TUSB564-Q1 is a VESA USB Type-C Alt Mode re-driving switch that supports data rates up to 8.1Gbps for upstream facing port. This device uses 5<sup>th</sup> generation USB re-driver technology. The device is used for UFP pin assignments C and D from the VESA DisplayPort Alt Mode on USB Type-C Standard.

The TUSB564-Q1 provides several levels of receive equalization to compensate for cable and board trace loss which if not equalized causes inter-symbol interference (ISI) when USB 3.2 or DisplayPort 1.4 signals travel across a PCB or cable. This device requires a 3.3V power supply. The device comes in an automotive grade 2 temperature range.

For a sink application, the TUSB564-Q1 enables the system to pass both transmitter compliance and receiver jitter tolerance tests for USB 3.2 up to 5Gbps and DisplayPort version 1.4 HBR3. The re-driver recovers incoming data by applying equalization that compensates for channel loss, and drives out signals with a high differential voltage. Each channel has a receiver equalizer with selectable gain settings. Set the equalization based on the amount of insertion loss in the channels connected to the TUSB564-Q1. Independent equalization control for each channel can be set using EQ[1:0], SSEQ[1:0], and DPEQ[1:0] pins.

The TUSB564-Q1 advanced state machine makes the device transparent to hosts and devices. After power up, the TUSB564-Q1 periodically performs receiver detection on the TX pairs. If the TUSB564-Q1 detects a USB 3.2 receiver, the RX termination is enabled, and the TUSB564-Q1 is ready to re-drive.

## 7.3 Feature Description

### 7.3.1 USB 3.2

The TUSB564-Q1 supports USB 3.2 datarates up to 5Gbps. The TUSB564-Q1 supports all the USB defined power states (U0, U1, U2, and U3). The TUSB564-Q1 is a linear redriver, therefore the device cannot decode USB3.2 physical layer traffic. The TUSB564-Q1 monitors the actual physical layer conditions like receiver termination, electrical idle, LFPS, and SuperSpeed signaling rate to determine the USB power state of the USB 3.2 interface.

The TUSB564-Q1 features an intelligent low-frequency periodic signaling (LFPS) detector. The LFPS detector automatically senses the low-frequency signals and disables receiver equalization functionality. When not receiving LFPS, the TUSB564-Q1 enables receiver equalization based on the EQ[1:0] and SSEQ[1:0] pins or values programmed into EQ1\_SEL, EQ2\_SEL, and SSEQ\_SEL registers.

### 7.3.2 DisplayPort

The TUSB564-Q1 supports up to four DisplayPort lanes at datarates up to 8.1Gbps (HBR3). When configured in DisplayPort mode, the TUSB564-Q1 monitors the native AUX traffic as the device traverses between DisplayPort source and DisplayPort sink. For the purposes of reducing power, the TUSB564-Q1 manages the number of active DisplayPort lanes based on the content of the AUX transactions. The TUSB564-Q1 snoops native AUX writes to DPCD registers 0x00101 (LANE\_COUNT\_SET) and 0x00600 (SET\_POWER\_STATE) of the DisplayPort sink. The TUSB564-Q1 disables or enables lanes based on value written to LANE\_COUNT\_SET. The TUSB564-Q1 disables all lanes when SET\_POWER\_STATE is in the D3. Otherwise, active lanes are based on value of LANE\_COUNT\_SET.

DisplayPort AUX snooping is enabled by default but can be disabled by changing the AUX\_SNOOP\_DISABLE register. After AUX snoop is disabled, management of TUSB564-Q1 DisplayPort lanes are controlled through various configuration registers.

#### 注

AUX snooping feature is only supported when TUSB564-Q1 is configured for I<sup>2</sup>C mode. When TUSB564-Q1 is configured for GPIO mode, the AUX snoop feature is disabled and all four DP lanes are enabled if HPDIN is asserted high.

When the TUSB564-Q1 AUX snoop feature is enabled, the syncs defined by the DisplayPort standard must be received for AUX snoop feature to function properly. AUX writes to the DPCD address 0x00600 and 0x00101 of the panel can result in SET\_POWER\_STATE and LANE\_COUNT\_SET fields at TUSB564-Q1 offset 0x12 to get set to the appropriate value. If these fields do not get set correctly, then incoming AUX may not be compliant. If this is the case, then it is best to disable AUX snoop by setting the AUX\_SNOOP\_DISABLE field at offset 0x13.

### 7.3.3 4-Level Inputs

The TUSB564-Q1 has (I2C\_EN, EQ[1:0], DPEQ[1:0], and SSEQ[1:0]) 4-level inputs pins that are used to control the equalization gain and place TUSB564-Q1 into different modes of operation. These 4-level inputs use a resistor divider to help set the four valid levels and provide a wider range of control settings. There is an internal 35kΩ pullup and a 95kΩ pulldown. These resistors, together with the external resistor connection combine to achieve the desired voltage level.

**表 7-1. 4-Level Control Pin Settings**

LEVEL	SETTINGS
0	Tie 1kΩ 5% to GND
R	Tie 20kΩ 5% to GND
F	Float (leave pin open)
1	Tie 1kΩ 5% to V <sub>CC</sub>

## 注

All 4-level inputs are latched after the rising edge of internal reset. After  $t_{cf\_g\_hd}$ , the internal pullup and pulldown resistors are isolated to save power.

### 7.3.4 Receiver Linear Equalization

The purpose of receiver equalization is to compensate for channel insertion loss and the resulting inter-symbol interference in the system before the input or after the output of the TUSB564-Q1. The receiver overcomes these losses by attenuating the low-frequency components of the signals with respect to the high-frequency components. Select the proper gain setting to match the channel insertion loss. Two 4-level input pins enable up to 16 possible equalization settings. The USB3.2 upstream path, USB3.2 downstream path, and DisplayPort each have two 4-level inputs. The TUSB564-Q1 also provides the flexibility of adjusting settings through I<sup>2</sup>C registers.

## 7.4 Device Functional Modes

### 7.4.1 Device Configuration in GPIO Mode

The TUSB564-Q1 is in GPIO configuration when I2C\_EN = "0". The TUSB564-Q1 supports the following configurations: USB only, 2 DisplayPort lanes + USB, or 4 DisplayPort lanes (no USB). The CTL1 pin controls whether DisplayPort is enabled. The combination of CTL1 and CTL0 selects between USB only, 2 lanes of DisplayPort, or 4-lanes of DisplayPort as detailed in 表 7-2. The AUXp or AUXn to SBU1 or SBU2 mapping is controlled based on 表 7-3.

After power up ( $V_{CC}$  from 0V to 3.3V), the TUSB564-Q1 defaults to USB mode. The USB PD controller upon detecting no device attached to Type-C port must take TUSB564-Q1 out of USB mode by transitioning the CTL0 pin from L to H and back to L.

表 7-2. GPIO Configuration Control

### 7.4.2 Device Configuration In I<sup>2</sup>C Mode

The TUSB564-Q1 is in I<sup>2</sup>C mode when I2C\_EN is not equal to 0. The same configurations defined in GPIO mode are also available in I<sup>2</sup>C mode. The TUSB564-Q1 USB and DisplayPort configuration is controlled based on 表 7-5. The AUXp or AUXn to SBU1 or SBU2 mapping control is based on 表 7-6.

表 7-5. I<sup>2</sup>C Configuration Control

REGISTERS			CONFIGURATION	VESA DisplayPort ALT MODE UFP_D CONFIGURATION
CTLSEL1	CTLSEL0	FLIPSEL		
0	0	0	Power Down	—

### 7.4.3 DisplayPort Mode

The TUSB564-Q1 supports up to four DisplayPort lanes at data rates up to 8.1Gbps. The TUSB564-Q1 can be enabled for DisplayPort through the GPIO control pin CTL1 or through the I<sup>2</sup>C register CTLSEL1. When I2C\_EN is "0", DisplayPort is controlled based on 表 7-2. When not in GPIO mode, DisplayPort functionality is controlled through I<sup>2</sup>C registers. Data transfer through the DisplayPort lanes is further controlled by the HPDIN pin. DisplayPort must be enabled using CTL1 pin or CTLSEL1 register and also HPDIN must be pulled high for the DisplayPort data transfer to be enabled through the DisplayPort lanes.

#### 注

When operating in 4-lane DP mode (CTLSEL[1:0] = 2h) with AUX snoop disabled (AUX\_SNOOP\_DISABLE = 1), all four DP lanes must be enabled (DP0\_DISABLE = DP1\_DISABLE = DP2\_DISABLE = DP3\_DISABLE = "0").

With AUX snoop disabled (AUX\_SNOOP\_DISABLE = 1) and CTLESEL[1:0] = 2h, the individual DP lane disable/enable for DP0 and DP3 are swapped and DP1 and DP2 are swapped. DP0\_DISABLE controls DP3, DP3\_DISABLE controls DP0, DP1\_DISABLE controls DP2, and DP2\_DISABLE controls DP1.

### 7.4.4 Linear EQ Configuration

Each of the TUSB564-Q1 receiver lanes has individual controls for receiver equalization. The receiver equalization gain value can be controlled either through I<sup>2</sup>C registers or through GPIOs. 表 7-7 details the gain value for each available combination when TUSB564-Q1 is in GPIO mode. These same options are also available in I<sup>2</sup>C mode by updating registers DP0EQ\_SEL, DP1EQ\_SEL, DP2EQ\_SEL, DP3EQ\_SEL, EQ1\_SEL, EQ2\_SEL, and SSEQ\_SEL. Each of the 4-bit EQ configuration registers is mapped to the configuration pins as follows: x\_SEL = {x1[1:0],x0[1:0]} where xn[1:0] are the EQ configuration pins with pin levels mapped to 2-bit values as: 0 = 00, R = 01, F = 10, 1 = 11.

**表 7-7. TUSB564-Q1 Receiver Equalization GPIO Control**

### 7.4.5 USB3 Modes

The TUSB564-Q1 monitors the physical layer conditions like receiver termination, electrical idle, LFPS, and SuperSpeed signaling rate to determine the state of the USB3.1 interface. Depending on the state of the USB 3.2 interface, the TUSB564-Q1 can be in one of four primary modes of operation when USB 3.2 is enabled (CTL0 = H or CTLSEL0 = 1b1): Disconnect, U2/U3, U1, and U0.

The Disconnect mode is the state in which TUSB564-Q1 has not detected far-end termination on upstream facing port (UFP) or downstream facing port (DFP). The disconnect mode is the lowest power mode of each of the four modes. The TUSB564-Q1 remains in this mode until far-end receiver termination has been detected on both UFP and DFP. The TUSB564-Q1 immediately exits this mode and enters U0 after far-end termination is detected.

When in U0 mode, the TUSB564-Q1 redrives all traffic received on UFP and DFP. U0 is the highest power mode of all USB3.1 modes. The TUSB564-Q1 remains in U0 mode until electrical idle occurs on both UFP and DFP. Upon detecting electrical idle, the TUSB564-Q1 immediately transitions to U1.

The U1 mode is the intermediate mode between U0 mode and U2/U3 mode. In U1 mode, the TUSB564-Q1 UFP and DFP receiver termination remains enabled. The UFP and DFP transmitter DC common mode is maintained. The power consumption in U1 is similar to power consumption of U0.

Next to the disconnect mode, the U2/U3 mode is next lowest power state. While in this mode, the TUSB564-Q1 periodically performs far-end receiver detection. Anytime the far-end receiver termination is not detected on either UFP or DFP, the TUSB564-Q1 leaves the U2/U3 mode and transitions to the Disconnect mode. The device also monitors for a valid LFPS. Upon detection of a valid LFPS, the TUSB564-Q1 immediately transitions to the U0 mode. In U2/U3 mode, the TUSB564-Q1 receiver terminations remain enabled but the TX DC common mode voltage is not maintained.

7.4.6 Operation Timing – Power Up

図 7-1. Power-Up Timing

表 7-8. Power-Up Timing (1) (2)

PARAMETER		MIN	MAX	UNIT

(2) Recommend CFG pins are stable when V<sub>CC</sub> is at minimum value.

## 7.5 Programming

For further programmability, the TUSB564-Q1 can be controlled using I<sup>2</sup>C. The SCL and SDA pins are used for I<sup>2</sup>C clock and I<sup>2</sup>C data, respectively.

**表 7-9. TUSB564-Q1 I<sup>2</sup>C Target Address**

### 7.5.1 TUSB564-Q1 I<sup>2</sup>C Target Behavior

**图 7-2. I<sup>2</sup>C Write with Data**

Use the following procedure to write data to TUSB564-Q1 I<sup>2</sup>C registers (refer to [图 7-2](#)):

1. The controller initiates a write operation by generating a start condition (S), followed by the TUSB564-Q1 7-bit address and a zero-value W/R bit to indicate a write cycle.
2. The TUSB564-Q1 acknowledges the address cycle.
3. The controller presents the register offset within TUSB564-Q1 to be written, consisting of one byte of data, MSB-first.
4. The TUSB564-Q1 acknowledges the sub-address cycle.
5. The controller presents the first byte of data to be written to the I<sup>2</sup>C register.
6. The TUSB564-Q1 acknowledges the byte transfer.
7. The controller can continue presenting additional bytes of data to be written, with each byte transfer completing with an acknowledge from the TUSB564-Q1.
8. The controller terminates the write operation by generating a stop condition (P).

**图 7-3. I<sup>2</sup>C Read Without Repeated Start**

Use the following procedure to read the TUSB564-Q1 I<sup>2</sup>C registers without a repeated Start (refer to [图 7-3](#)).

1. The controller initiates a read operation by generating a start condition (S), followed by the TUSB564-Q1 7-bit address and a zero-value W/R bit to indicate a read cycle.
2. The TUSB564-Q1 acknowledges the 7-bit address cycle.
3. Following the acknowledge the controller continues sending clock.
4. The TUSB564-Q1 transmits the contents of the memory registers MSB-first starting at register 00h or last read register offset+1. If a write to the I<sup>2</sup>C register occurred prior to the read, then the TUSB564-Q1 shall start at the register offset specified in the write.
5. The TUSB564-Q1 waits for either an acknowledge (ACK) or a not-acknowledge (NACK) from the controller after each byte transfer; the I<sup>2</sup>C controller acknowledges reception of each data byte transfer.
6. If an ACK is received, the TUSB564-Q1 transmits the next byte of data as long as controller provides the clock. If a NAK is received, the TUSB564-Q1 stops providing data and waits for a stop condition (P).
7. The controller terminates the write operation by generating a stop condition (P).

図 7-4. I<sup>2</sup>C Read with Repeated Start

Use the following procedure to read the TUSB564-Q1 I<sup>2</sup>C registers with a repeated Start (refer 図 7-4).

1. The controller initiates a read operation by generating a start condition (S), followed by the TUSB564-Q1 7-bit address and a zero-value W/R bit to indicate a write cycle.
2. The TUSB564-Q1 acknowledges the 7-bit address cycle.
3. The controller presents the register offset within TUSB564-Q1 to be written, consisting of one byte of data, MSB-first.
4. The TUSB564-Q1 acknowledges the register offset cycle.
5. The controller presents a repeated start condition (Sr).
6. The controller initiates a read operation by generating a start condition (S), followed by the TUSB564-Q1 7-bit address and a one-value W/R bit to indicate a read cycle.
7. The TUSB564-Q1 acknowledges the 7-bit address cycle.
8. The TUSB564-Q1 transmit the contents of the memory registers MSB-first starting at the register offset.
9. The TUSB564-Q1 shall wait for either an acknowledge (ACK) or a not-acknowledge (NACK) from the controller after each byte transfer; the I<sup>2</sup>C controller acknowledges reception of each data byte transfer.
10. If an ACK is received, the TUSB564-Q1 transmits the next byte of data as long as controller provides the clock. If a NAK is received, the TUSB564-Q1 stops providing data and waits for a stop condition (P).
11. The controller terminates the read operation by generating a stop condition (P).

図 7-5. I<sup>2</sup>C Write Without Data

Use the following procedure to set a starting sub-address for I<sup>2</sup>C reads (refer to 図 7-5).

1. The controller initiates a write operation by generating a start condition (S), followed by the TUSB564-Q1 7-bit address and a zero-value W/R bit to indicate a write cycle.
2. The TUSB564-Q1 acknowledges the address cycle.
3. The controller presents the register offset within TUSB564-Q1 to be written, consisting of one byte of data, MSB-first.
4. The TUSB564-Q1 acknowledges the register offset cycle.
5. The controller terminates the write operation by generating a stop condition (P).

## 注

After initial power up, if no register offset is included for the read procedure (refer to [図 7-3](#)), then reads start at register offset 00h and continue byte by byte through the registers until the I<sup>2</sup>C controller terminates the read operation. During a read operation, the TUSB564-Q1 auto-increments the I<sup>2</sup>C internal register address of the last byte transferred independent of whether or not an ACK was received from the I<sup>2</sup>C controller.

Software must only access (read or write) addresses detailed in this document. Accessing reserved or undocumented addresses can result in TUSB564-Q1 entering an undefined state.

## 8 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

### 8.1 Application Information

The TUSB564-Q1 is a linear redriver designed specifically to compensation for intersymbol interference (ISI) jitter caused by signal attenuation through a passive medium like PCB traces and cables. Because the TUSB564-Q1 has four independent DisplayPort 1.4 inputs, one upstream facing USB 3.2 Gen 1 input, and two downstream facing USB 3.2 Gen 1 inputs, the TUSB564-Q1 can be optimized to correct ISI on all those seven inputs through 16 different equalization choices. Placing the TUSB564-Q1 between a USB3.2 Host/DisplayPort 1.4 GPU and a USB3.2 Type-C receptacle can correct signal integrity issues resulting in a more robust system.

### 8.2 Typical Application

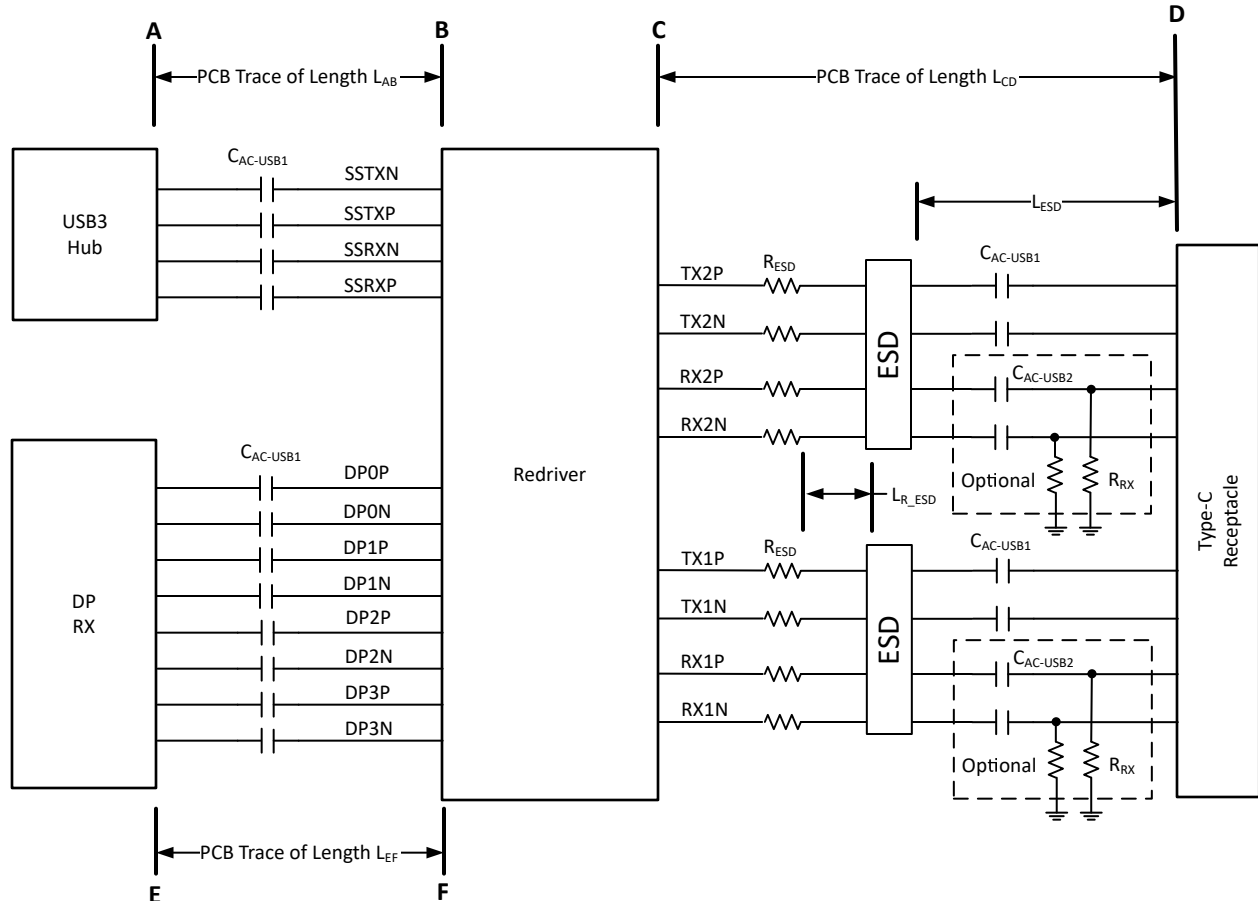

図 8-1. TUSB564-Q1 in a DP Alt Sink Application

### 8.2.1 Design Requirements

For this design example, use the parameters provided in 表 8-1.

表 8-1. Design Parameters

PARAMETER <sup>(1)</sup>	VALUE
Redriver to USB3 Hub maximum PCB trace length, $X_{AB}$	8 inches
Redriver to DP RX maximum PCB trace length, $X_{EF}$	6 inches
Redriver to Type-C connector maximum PCB trace length, $X_{CD}$	2 inches
Maximum distance of ESD component from the USB receptacle, $L_{ESD}$	1.0 inches
Maximum distance of series resistor ( $R_{ESD}$ ) from ESD component, $L_{R\_ESD}$	0.25 inches
$C_{AC-USB1}$ AC-coupling capacitor (75nF to 265nF)	100nF or 220nF
$C_{AC-USB2}$ AC-coupling capacitor (297nF to 363nF)	Options: <ul style="list-style-type: none"> <li>• RX1 and RX2 are DC-coupled to USB receptacle</li> <li>• 330nF AC-couple with <math>R_{RX}</math> resistor</li> </ul>
Optional $R_{RX}$ resistor (220k $\Omega$ $\pm$ 5%)	220k $\Omega$ $\pm$ 5%
Optional $R_{ESD}$ (0 $\Omega$ to 2.2 $\Omega$ )	1 $\Omega$
VCC supply (3V to 3.6V)	3.3V
I2C Mode or GPIO Mode	I2C Mode. (I2C_EN pin != "0")
1.8V or 3.3V I2C Interface	3.3V I2C. Pullup the I2C_EN pin to 3.3V with a 1K ohm resistor. CTL1, EQ[1:0], SSEQ[1:0], and DPEQ[1:0] pin unconnected.
EQ setting for DisplayPort Lanes	EQ Setting # 5 (Register 0x0A[4] = 1'b1, 0x10 = 0x55; 0x11 = 0x55)
EQ setting for Downstream USB Data Path	EQ Setting # 6 (Register 0x0A[4] = 1'b1, 0x20 = 0x66)
EQ setting for Upstream USB Data Path	EQ Setting # 6 (Register 0x0A[4] = 1'b1, 0x21 = 0x08)

(1) Maximum trace length assumes an insertion loss of 0.2dB/inch/GHz. If insertion loss is more than 0.2dB/inch/GHz, then maximum trace length must be reduced accordingly.

### 8.2.2 Detailed Design Procedure

A typical usage of the TUSB564-Q1 device is shown in 図 8-2. The device can be controlled either through its GPIO pins or through its I<sup>2</sup>C interface. In the example shown below, a Type-C PD controller is used to configure the device through the I<sup>2</sup>C interface. In I<sup>2</sup>C mode, the equalization settings for each receiver can be independently controlled through I<sup>2</sup>C registers. For this reason, the configuration pin CTL1 and all of the equalization pins (EQ[1:0], SSEQ[1:0], and DPEQ[1:0]) can be left unconnected. If these pins are left unconnected, the TUSB564-Q1 7-bit I<sup>2</sup>C target address is 0x12 because both DPEQ/A1 and SSEQ0/A0 are at pin level "F". If a different I<sup>2</sup>C target address is desired, set the DPEQ/A1 and SSEQ0/A0 pins to a level which produces the desired I<sup>2</sup>C target address.

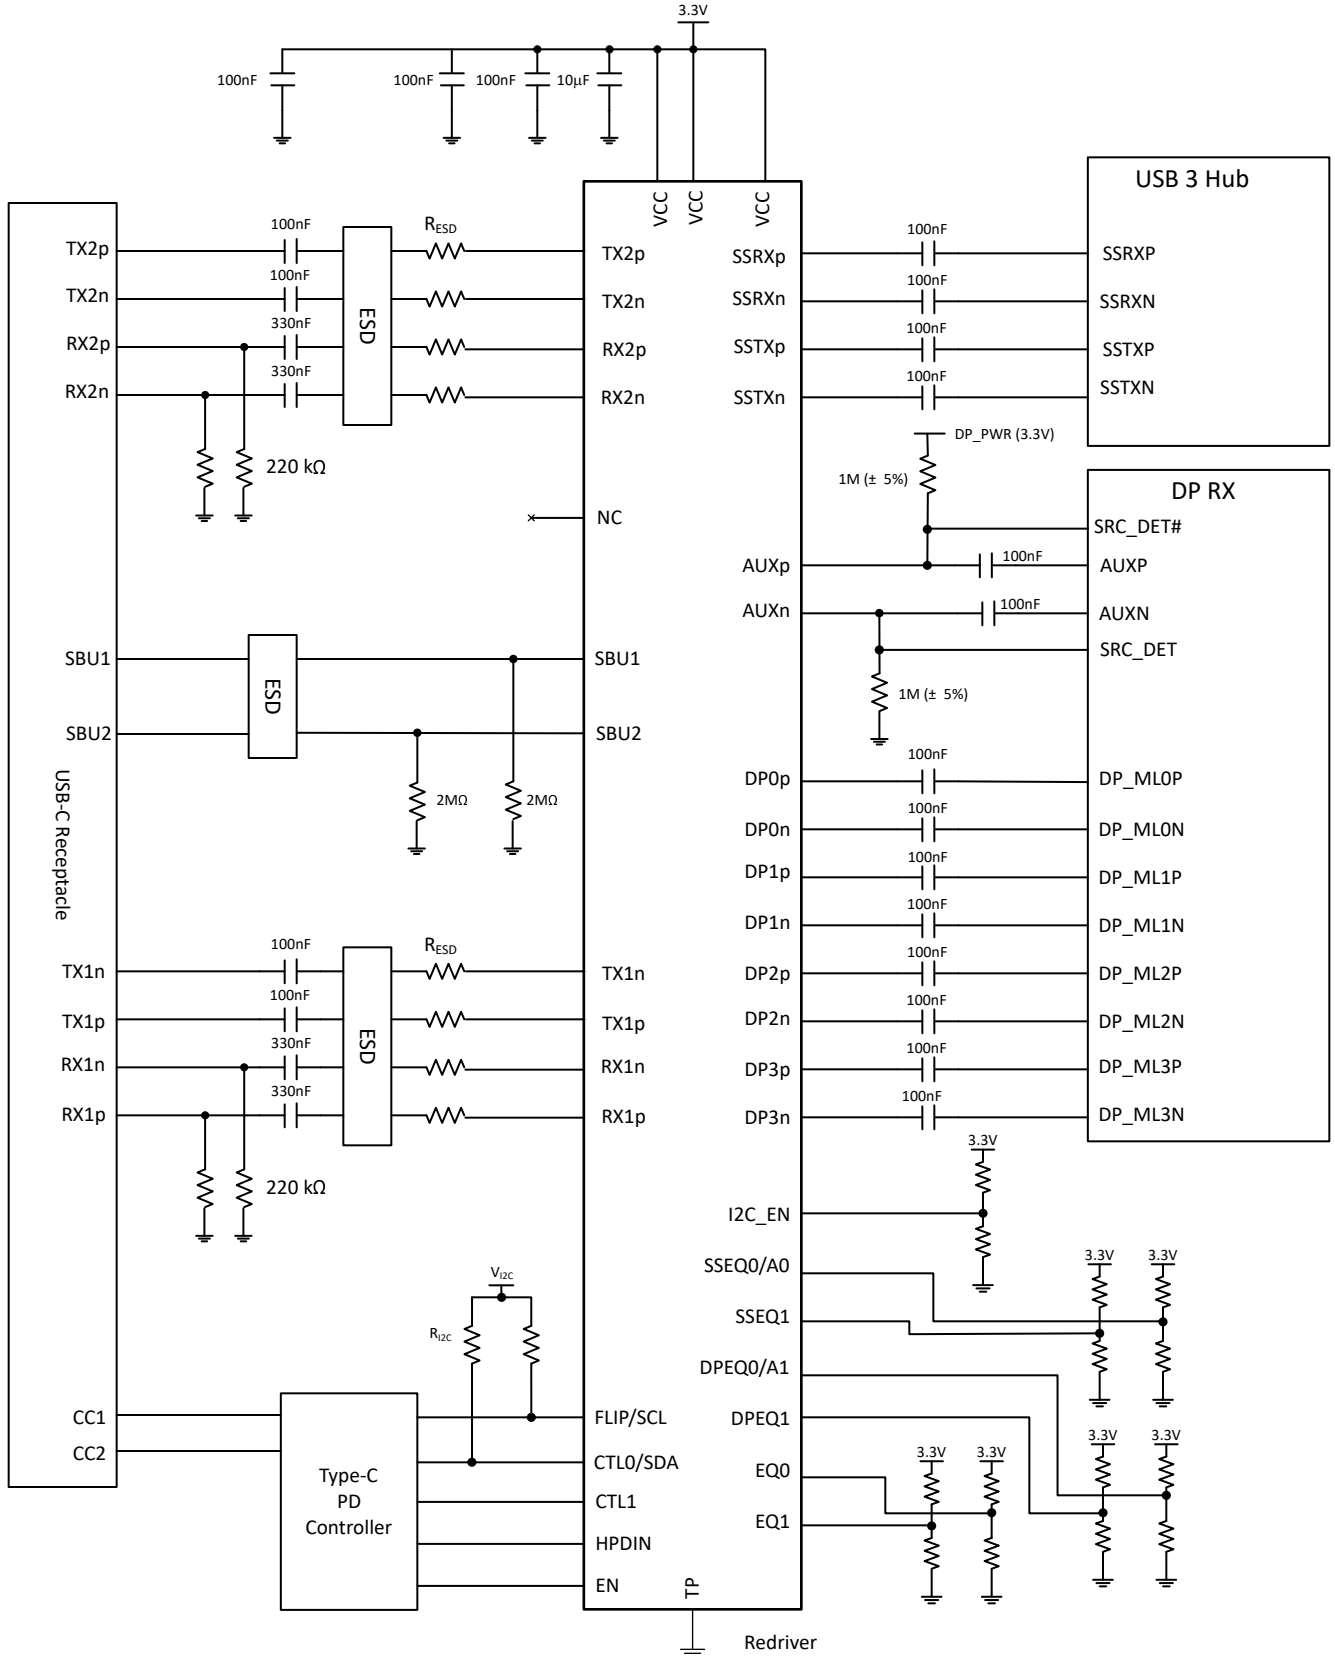

图 8-2. Application Circuit

### 8.2.2.1 ESD Protection

It may be necessary to incorporate an ESD component to protect the TUSB564-Q1 from electrostatic discharge (ESD). TI recommends following the ESD protection recommendations listed in 表 8-2. A clamp voltage greater than value specified in 表 8-2 may require a  $R_{ESD}$  on each differential pin. Place the ESD component near the USB connector.

**表 8-2. ESD Diodes Recommended Characteristics**

PARAMETER	RECOMMENDATION
Breakdown voltage	$\geq 3.5V$
I/O line capacitance	Data rates $\leq 5Gbps$ : $\leq 0.50pF$
	Data rates $> 5Gbps$ : $\leq 0.35pF$
Delta capacitance between any P and N I/O pins	$\leq 0.07pF$
Clamping voltage at 8A $I_{PP}$ IO to GND <sup>(1)</sup>	$\leq 4.5V$
Typical dynamic resistance	$\leq 30m\Omega$

(1) According to IEC 61000-4-5 (8/20 $\mu s$  current waveform)

**表 8-3. Recommended ESD Protection Component**

MANUFACTURER	PART NUMBER	$R_{ESD}$ TO SUPPORT IEC 61000-4-2 CONTACT $\pm 8kV$
Nexperia	PUSB3FR4	1 $\Omega$
Nexperia	PESD2V8Y1BSF	1 $\Omega$
Texas Instruments	TPD1E04U04DPLR	2 $\Omega$
Texas Instruments	TPD4E02B04DQAR	2 $\Omega$

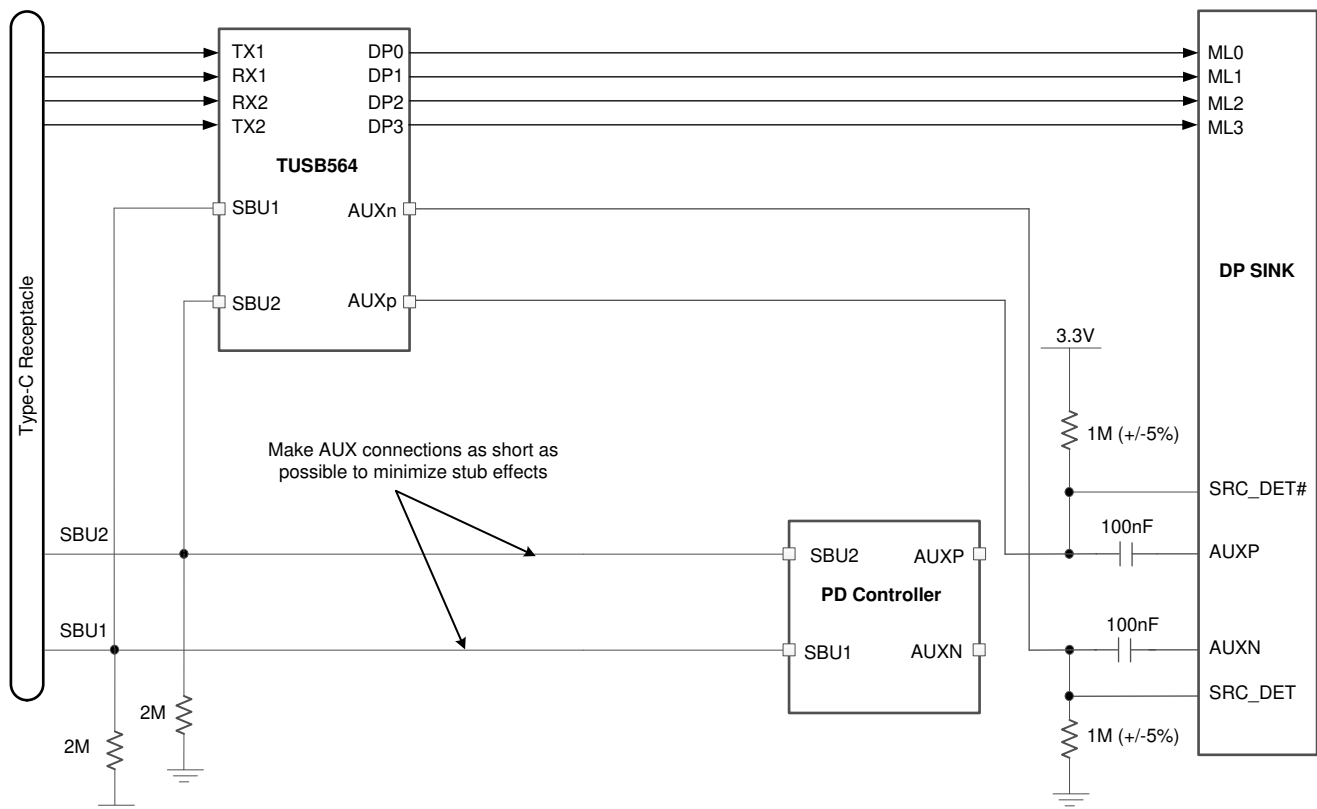

### 8.2.2.2 Support for DisplayPort UFP\_D Pin Assignment E

The TUSB564-Q1 device can be used in a system that handles DisplayPort UFP\_D Pin Assignment E use-case if special measures are taken as described below. With UFP\_D Pin Assignment E, the polarity of both the main link and AUX signals are inverted on the Type-C receptacle pins relative to Pin Assignment C. Moreover, on the Type-C receptacle, the location of Lane 0 is swapped with Lane 1 and that of Lane 2 is swapped with Lane 3 relative to Pin Assignment C. For correct reception of the DisplayPort video signal, the system must comprehend the above-described signaling variation.

The use of the TUSB564-Q1 device in a system that handles Pin Assignment E depends on whether AUX-to-SBU switching of the DisplayPort AUX signal is performed internally by the TUSB564-Q1 or by external devices such as a PD controller. It also depends on the configuration mode used: I<sup>2</sup>C Mode or GPIO Mode. In all those scenarios, the TUSB564-Q1 passes the polarity of the Main Link signals as received. The DisplayPort sink must handle the polarity inversion of those signals. Moreover, the DisplayPort sink must handle the lane swapping with the following lane-to-pin mapping as received by the TUSB564-Q1 device: Lane 0 → DP1, Lane 1 → DP0, Lane 2 → DP3, and Lane 3 → DP2.

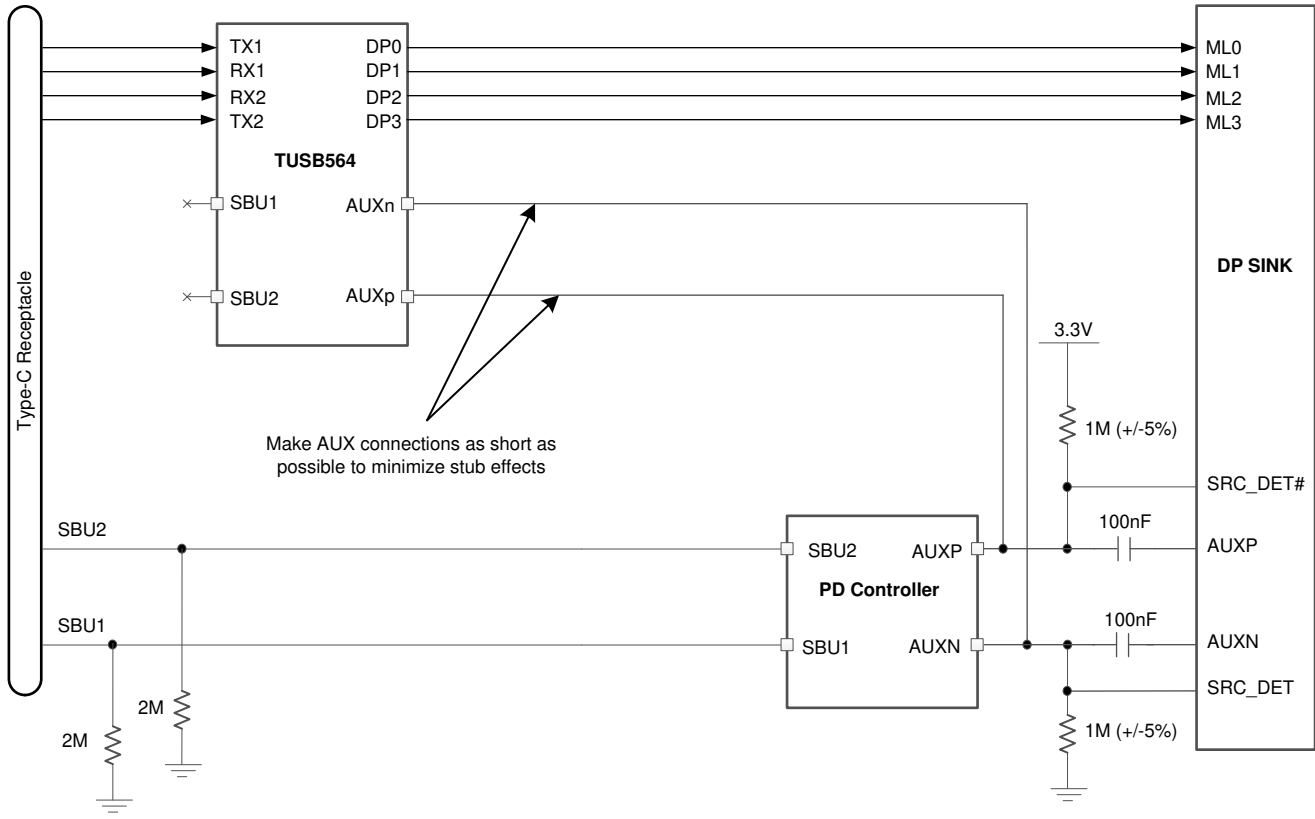

The use-case with the AUX-to-SBU switching performed internally by the TUSB564-Q1 device is shown in [Figure 8-3](#). If the TUSB564-Q1 device configuration is through the I<sup>2</sup>C Mode, AUX snooping must be disabled by setting AUX\_SNOOP\_DISABLE register 0x13[7] = 1'b1, and manual AUX-to-SBU switching must be performed through the AUX\_SBU\_OVR register 0x13[5:4]: AUX\_SBU\_OVR = 2'b01 for normal USB Type-C plug orientation, or AUX\_SBU\_OVR = 2'b10 for flipped USB Type-C plug orientation when Pin Assignment E signals are received. If the TUSB564-Q1 device configuration is through the GPIO Mode, all four DisplayPort lanes are automatically activated. The DisplayPort sink device must handle the polarity inversion of both the AUX and Main Link signals as well as main link lane swapping.

Copyright © 2017, Texas Instruments Incorporated

**Figure 8-3. DisplayPort AUX Connections for UFP\_D Pin Assignment E with Internal AUX Switching**

The use-case with the AUX-to-SBU switching performed by an external device is shown in [Figure 8-4](#). In this case, it is assumed that the PD controller is capable of correcting the polarity inversion of the AUX signal and the TUSB564-Q1 is provided with the corrected polarity of the AUX signal through its AUXp/AUXn pins. If the TUSB564-Q1 device configuration is through the I<sup>2</sup>C Mode, disable AUX snooping by setting AUX\_SNOOP\_DISABLE register 0x13[7] = 1'b1. The DisplayPort sink device must handle the polarity inversion of the Main Link signals as well as the Main Link lane swapping.

## 8.4 Power Supply Recommendations

The TUSB564-Q1 is designed to operate with a 3.3V power supply. Do not use levels above those listed in *Recommended Operating Conditions*. If using a higher voltage system power supply, a voltage regulator can be used to step down to 3.3V. Use decoupling capacitors to reduce noise and improve power supply integrity. Connect a 0.1 $\mu$ F capacitor between each power pin and ground.

## 8.5 Layout

### 8.5.1 Layout Guidelines

1. Route RXP/N and TXP/N pairs with controlled 90 $\Omega$  differential impedance ( $\pm 15\%$ ).
2. Keep away from other high speed signals.
3. Keep intra-pair routing to within 2 mils.
4. Place length matching near the location of mismatch.
5. Separate each pair by at least 3 times the signal trace width.
6. Keep the use of bends in differential traces to a minimum. When bends are used, make sure to keep the number of left and right bends as equal as possible and the angle of the bend  $\geq 135$  degrees. This minimizes any length mismatch causes by the bends and therefore minimizes the impact bends have on EMI.
7. Route all differential pairs on the same of layer.
8. Keep the number of vias to a minimum. TI recommends to keep the via count to 2 or less.
9. Keep traces on layers adjacent to ground plane.
10. Do NOT route differential pairs over any plane split.
11. Note that adding test points can cause impedance discontinuity, and therefore negatively impact signal performance. If test points are used, place the points in series and symmetrically. The points must not be placed in a manner that causes a stub on the differential pair.

### 8.5.2 Layout Example

8-12. Layout Example

## 9 Register Maps

表 9-1. Register Legend

ACCESS TAG	NAME	MEANING
R	Read	The field can be read by software
W	Write	The field can be written by software
S	Set	The field can be set by a write of one. Writes of zeros to the field have no effect.
C	Clear	The field can be cleared by a write of one. Write of zero to the field have no effect.
U	Update	Hardware can autonomously update this field.
NA	No Access	Not accessible or not applicable

### 9.1 General Register (address = 0x0A) [reset = 0000001]

図 9-1. General Registers

R	RU		RU				

LEGEND: R/W = Read/Write; R = Read only; -n = value after reset

表 9-5. DisplayPort Control/Status Registers (0x12)

Bit	Field	Type	Reset	Description
7	Reserved	R	0	Reserved
6:5	SET_POWER_STATE	R/U	00	This field represents the snooped value of the AUX write to DPCD address 0x00600. When AUX_SNOOP_DISABLE = 1'b0, the TUSB564-Q1 enables or disables the DP lanes based on the snooped value. When AUX_SNOOP_DISABLE = 1'b1, then DP lane enable/disable are determined by state of DPx_DISABLE registers, where x = 0, 1, 2, or 3. This field is reset to 2'b00 by hardware when CTLSEL1 changes from a 1'b1 to a 1'b0.
4:0	LANE_COUNT_SET	R/U	00000	This field represents the snooped value of AUX write to DPCD address 0x00101 register. When AUX_SNOOP_DISABLE = 1'b0, the TUSB564-Q1 enables DP lanes specified by the snoop value. Unused DP lanes are disabled to save power. When AUX_SNOOP_DISABLE = 1'b1, then DP lanes enable/disable are determined by DPx_DISABLE registers, where x = 0, 1, 2, or 3. This field is reset to 0x0 by hardware when CTLSEL1 changes from a 1'b1 to a 1'b0.

## 9.5 DisplayPort Control/Status Registers (address = 0x13) [reset = 00000000]

図 9-5. DisplayPort Control/Status Registers (0x13)

LEGEND: R/W = Read/Write; R = Read only; -n = value after reset

表 9-9. USB3.1 Control/Status Registers (0x22)

Bit	Field	Type	Reset	Description
7	CM_ACTIVE	R/U	0	0: Device not in USB 3.1 compliance mode. (Default) 1: Device in USB 3.1 compliance mode
6	LFPS_EQ	R/W	0	Controls whether settings of EQ based on EQ1_SEL, EQ2_SEL and SSEQ_SEL applies to received LFPS signal. 0 – EQ set to zero when receiving LFPS (default) 1 – EQ set to EQ1_SEL, EQ2_SEL, and SSEQ_SEL when receiving LFPS.
5	U2U3_LFPS_DEBOUNCE	R/W	0	0: No debounce of LFPS before U2/U3 exit. (Default) 1: 200µs debounce of LFPS before U2/U3 exit.
4	DISABLE_U2U3_RXDET	R/W	0	0: Rx.Detect in U2/U3 enabled. (Default) 1: Rx.Detect in U2/U3 disabled.
3:2	DFP_RXDET_INTERVAL	R/W	00	This field controls the Rx.Detect interval for the Downstream facing port (TX1P/N and TX2P/N). 00: 8ms 01: 12ms (default) 10: Reserved 11: Reserved
1:0	USB3_COMPLIANCE_CTRL	R/W	00	00: FSM determined compliance mode. (Default) 01: Compliance Mode enabled in DFP direction (SSTX -> TX1/TX2) 10: Compliance Mode enabled in UFP direction (RX1/RX2 -> SSRX) 11: Compliance Mode Disabled.

## 10 Device and Documentation Support

### 10.1 ドキュメントの更新通知を受け取る方法

ドキュメントの更新についての通知を受け取るには、[www.tij.co.jp](http://www.tij.co.jp) のデバイス製品フォルダを開いてください。[通知] をクリックして登録すると、変更されたすべての製品情報に関するダイジェストを毎週受け取ることができます。変更の詳細については、改訂されたドキュメントに含まれている改訂履歴をご覧ください。

### 10.2 サポート・リソース

テキサス・インスツルメンツ E2E™ サポート・フォーラムは、エンジニアが検証済みの回答と設計に関するヒントをエキスパートから迅速かつ直接得ることができる場所です。既存の回答を検索したり、独自の質問をしたりすることで、設計に必要な支援を迅速に得ることができます。

リンクされているコンテンツは、各寄稿者により「現状のまま」提供されるものです。これらはテキサス・インスツルメンツの仕様を構成するものではなく、必ずしもテキサス・インスツルメンツの見解を反映したものではありません。テキサス・インスツルメンツの[使用条件](#)を参照してください。

### 10.3 Trademarks

DisplayPort™ is a trademark of Video Electronics Standards Association.

テキサス・インスツルメンツ E2E™ is a trademark of Texas Instruments.

USB Type-C® and USB-C® are registered trademarks of USB Implementers Forum.

VESA® is a registered trademark of Video Electronics Standards Association.

すべての商標は、それぞれの所有者に帰属します。

### 10.4 静電気放電に関する注意事項

この IC は、ESD によって破損する可能性があります。テキサス・インスツルメンツは、IC を取り扱う際には常に適切な注意を払うことを推奨します。正しい取り扱いおよび設置手順に従わない場合、デバイスを破損するおそれがあります。

ESD による破損は、わずかな性能低下からデバイスの完全な故障まで多岐にわたります。精密な IC の場合、パラメータがわずかに変化するだけで公表されている仕様から外れる可能性があるため、破損が発生しやすくなっています。

### 10.5 用語集

[テキサス・インスツルメンツ用語集](#) この用語集には、用語や略語の一覧および定義が記載されています。

## 11 Revision History

### Changes from Revision \* (May 2024) to Revision A (September 2024)

---------------------------------------	---

## 12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

## 重要なお知らせと免責事項

テキサス・インスツルメンツは、技術データと信頼性データ (データシートを含みます)、設計リソース (リファレンス デザインを含みます)、アプリケーションや設計に関する各種アドバイス、Web ツール、安全性情報、その他のリソースを、欠陥が存在する可能性のある「現状のまま」提供しており、商品性および特定目的に対する適合性の黙示保証、第三者の知的財産権の非侵害保証を含むいかなる保証も、明示的または黙示的にかかわらず拒否します。

これらのリソースは、テキサス・インスツルメンツ製品を使用する設計の経験を積んだ開発者への提供を意図したものです。(1) お客様のアプリケーションに適した テキサス・インスツルメンツ製品の選定、(2) お客様のアプリケーションの設計、検証、試験、(3) お客様のアプリケーションに該当する各種規格や、その他のあらゆる安全性、セキュリティ、規制、または他の要件への確実な適合に関する責任を、お客様のみが単独で負うものとします。

上記の各種リソースは、予告なく変更される可能性があります。これらのリソースは、リソースで説明されている テキサス・インスツルメンツ製品を使用するアプリケーションの開発の目的でのみ、テキサス・インスツルメンツはその使用をお客様に許諾します。これらのリソースに関して、他の目的で複製することや掲載することは禁止されています。テキサス・インスツルメンツや第三者の知的財産権のライセンスが付与されている訳ではありません。お客様は、これらのリソースを自身で使用した結果発生するあらゆる申し立て、損害、費用、損失、責任について、テキサス・インスツルメンツおよびその代理人を完全に補償するものとし、テキサス・インスツルメンツは一切の責任を拒否します。

テキサス・インスツルメンツの製品は、[テキサス・インスツルメンツの販売条件](#)、または [ti.com](https://www.ti.com) やかかる テキサス・インスツルメンツ製品の関連資料などのいずれかを通じて提供する適用可能な条項の下で提供されています。テキサス・インスツルメンツがこれらのリソースを提供することは、適用されるテキサス・インスツルメンツの保証または他の保証の放棄の拡大や変更を意味するものではありません。

お客様がいかなる追加条項または代替条項を提案した場合でも、テキサス・インスツルメンツはそれらに異議を唱え、拒否します。

**PACKAGING INFORMATION**

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TUSB564RGFRQ1	ACTIVE	VQFN	RGF	40	3000	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 105	TSB6421	<a href="#">Samples</a>
TUSB564RGFTQ1	ACTIVE	VQFN	RGF	40	250	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 105	TSB6421	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSELETE:** TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

**RoHS Exempt:** TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

**Important Information and Disclaimer:**The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

**VQFN - 1 mm max height**

5 x 7, 0.5 mm pitch

PLASTIC QUAD FLAT PACK- NO LEAD

This image is a representation of the package family, actual package may vary.  
Refer to the product data sheet for package details.

4225115/A

PLASTIC QUAD FLATPACK- NO LEAD

NOTES:

1. All linear dimensions are in millimeters. Any dimensions in parenthesis are for reference only. Dimensioning and tolerancing per ASME Y14.5M.
2. This drawing is subject to change without notice.
3. The package thermal pad must be soldered to the printed circuit board for optimal thermal and mechanical performance.

**LAND PATTERN EXAMPLE**  
EXPOSED METAL SHOWN  
SCALE: 12X

**SOLDER MASK DETAILS**

4225901/A 05/2020

NOTES: (continued)

- This package is designed to be soldered to a thermal pad on the board. For more information, see Texas Instruments literature number SLUA271 ([www.ti.com/lit/slua271](http://www.ti.com/lit/slua271)).
- Vias are optional depending on application, refer to device data sheet. If any vias are implemented, refer to their locations shown on this view. It is recommended that vias under paste be filled, plugged or tented.
