TVS0500 5Vフラットクランプ・サージ保護デバイス

1 特長

- 産業用信号ライン向け2kV、42ΩのIEC 61000-4-5サージ・テストに耐える保護機能
- 最大クランプ電圧: サージ電流(8/20µs) 43Aで9.2V
- スタンドオフ電圧: 5V
- 4mm^{2}の小さい占有面積
- 125℃で35Aのサージ電流(8/20µs)の反復ストライクを5,000回吸収
- 強力なサージ保護:
  - IEC61000-4-5 (8/20µs): 43A
  - IEC61643-321 (10/1000µs): 22A
- 低リーク電流
  - 27℃で70pA (標準値)
  - 85℃で6.5nA (標準値)
- 低容量: 155pF
- レベル4 IEC 61000-4-2に準拠したESD保護機能を内蔵

2 アプリケーション

- 産業用センサ
- PLC I/Oモジュール
- 5V電力ライン
- 家電製品
- 医療用機器
- スマート・メータ

3 概要

TVS0500は、最大43AのIEC 61000-4-5フォルト電流を強力にシャントして、システムを高電力過渡事象や落雷から保護します。一般的な産業用信号ラインのEMC要件向けのソリューションとして、42Ωのインピーダンスにより結合される、最大2kVのIEC 61000-4-5開路電圧に耐えられます。TVS0500は、独自の帰還メカニズムの採用により、フォルト時に高精度のフラット・クランピングを実現し、システムがさらされる電圧を10V未満に抑えます。電圧レギュレーションが正確であるため、許容電圧の低いシステム部品を安心して選択でき、堅牢性を犠牲にすることなくシステムのコストと複雑さを抑えることができます。

また、TVS0500は占有面積が小さい2mm×2mmのSONパッケージで供給されるため、スペースの制約があるアプリケーションに最適であり、業界標準のSMA/SMBパッケージに比べて占有面積を70%削減できます。リーク電流と容量が極めて低いことから、保護するラインへの影響も最小限に抑えられます。製品のライフサイクル全体にわたる強力な保護を保証するために、TIはTVS0500に対し高温で5000回の反復サージが発生するテストを実施し、性能に変化がないことを確認しています。

TVS0500はTIのフラットクランプ・サージ・デバイス・ファミリの製品です。同ファミリに属する他のデバイスの詳細については、「*デバイス比較表*」を参照してください。

7 Specifications

7.1 Absolute Maximum Ratings

T_A = 27℃ (unless otherwise noted)(1)

		MIN	MAX	UNIT
Maximum Surge	IEC 61000-4-5 Current (8/20 µs)		43	A
	IEC 61000-4-5 Power (8/20 µs)		400	W
	IEC 61643-321 Current (10/1000 µs)		20	A
	IEC 61643-321 Power (10/1000 µs)		180	W
Maximum Forward Surge	IEC 61000-4-5 Current (8/20 µs)		50	A
	IEC 61000-4-5 Power (8/20 µs)		80	W
	IEC 61643-321 Current (10/1000 µs)		23	A
	IEC 61643-321 Power (10/1000 µs)		60	W
EFT	IEC 61000-4-4 EFT Protection		80	A
I_{BR}	DC Breakdown Current		50	mA
I_F	DC Forward Current		500	mA
T_A	Ambient Operating Temperature	-40	125	°C
T_{stg}	Storage Temperature	-65	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Rating* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Condition*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

7.2 ESD Ratings - JEDEC

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human body model (HBM), per ANSI/ESDA/JEDEC JS-001, all pins(1)	±2000	V
		Charged device model (CDM), per JEDEC specification JESD22-C101, all pins(2)	±500	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

7.3 ESD Ratings - IEC

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	IEC 61000-4-2 contact discharge	±24	kV
		IEC 61000-4-2 air-gap discharge	±30	

7.4 Recommended Operating Conditions

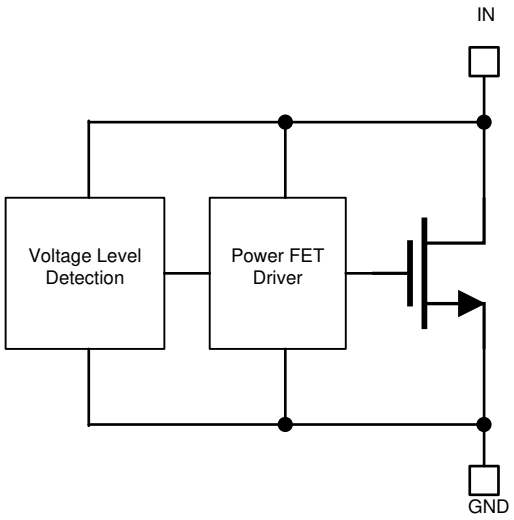
8 Detailed Description

8.1 Overview

The TVS0500 is a precision clamp with a low, flat clamping voltage during transient overvoltage events like surge and protecting the system with zero voltage overshoot.

8.2 Functional Block Diagram



8.3 Feature Description

The TVS0500 is a precision clamp that handles 43 A of IEC 61000-4-5 8/20 µs surge pulse. The flat clamping feature helps keep the clamping voltage very low to keep the downstream circuits from being stressed. The flat clamping feature can also help end-equipment designers save cost by opening up the possibility to use lower-cost, lower voltage tolerant downstream ICs. The TVS0500 has minimal leakage under the standoff voltage of 5 V, making it an ideal candidate for applications where low leakage and power dissipation is a necessity. IEC 61000-4-2 and IEC 61000-4-4 ratings make it a robust protection solution for ESD and EFT events. Wide ambient temperature range of –40°C to +125°C a good candidate for most applications. Compact packages enable it to be used in small devices and save board area.

8.4 Reliability Testing

To ensure device reliability, the TVS0500 is characterized against 5000 repetitive pulses of 35 A IEC 61000-4-5 8/20 µs surge pulses at 125°C. The test is performed with less than 10 seconds between each pulse at high temperature to simulate worst case scenarios for fault regulation. After each surge pulse, the TVS0500 clamping voltage, breakdown voltage, and leakage are recorded to ensure that there is no variation or performance degradation. By ensuring robust, reliable, high temperature protection, the TVS0500 enables fault protection in applications that must withstand years of continuous operation with no performance change.

8.5 Device Functional Modes

8.5.1 Protection Specifications

The TVS0500 is specified according to both the IEC 61000-4-5 and IEC 61643-321 standards. This enables usage in systems regardless of which standard is required in relevant product standards or best matches measured fault conditions. The IEC 61000-4-5 standards requires protection against a pulse with a rise time of 8 µs and a half length of 20 µs, while the IEC 61643-321 standard requires protection against a much longer pulse with a rise time of 10 µs and a half length of 1000 µs.

Device Functional Modes (continued)

The positive and negative surges are imposed to the TVS0500 by a combinational waveform generator (CWG) with a 2-Ω coupling resistor at different peak voltage levels. For powered on transient tests that need power supply bias, inductances are usually used to decouple the transient stress and protect the power supply. The TVS0500 is post tested by assuring that there is no shift in device breakdown or leakage at V_{rwm}.

In addition, the TVS0500 has been tested according to IEC 61000-4-5 to pass a ±2 kV surge test through a 42-Ω coupling resistor and a 0.5 µF capacitor. This test is a common test requirement for industrial signal I/O lines and the TVS0500 will serve an ideal protection solution for applications with that requirement.

The TVS0500 allow integrates IEC 61000-4-2 level 4 ESD Protection and 80 A of IEC 61000-4-4 EFT Protection. These combine to ensure that the device can protect against most transient conditions regardless of length or type.

For more information on TI's test methods for Surge, ESD, and EFT testing, reference TI's IEC 61000-4-x Testing Application Note

8.5.2 Minimal Derating

Unlike traditional diodes the TVS0500 has very little derating of max power dissipation and ensures robust performance up to 125°C, shown in 図 8. Traditional TVS diodes lose up to 50% of their current carrying capability when at high temperatures, so a surge pulse above 85°C ambient can cause failures that are not seen at room temperature. The TVS0500 prevents this and ensures that you will see the same level of protection regardless of temperature.

8.5.3 Transient Performance

During large transient swings, the TVS0500 will begin clamping the input signal to protect downstream conditions. While this prevents damage during fault conditions, it can cause leakage when the intended input signal has a fast slew rate. In order to keep power dissipation low and remove the chance of signal distortion, it is recommended to keep the slew rate of any input signal on the TVS0500 below 2.5 V/µs at room temperature and below 0.7 V/µs at 125°C shown in 図 9. Faster slew rates will cause the device to clamp the input signal and draw current through the device for a few microseconds, increasing the rise time of the signal. This will not cause any harm to the system or to the device, however if the fast input voltage swings occur regularly it can cause device overheating.

9 Application and Implementation

注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The TVS0500 can be used to protect any power, analog, or digital signal from transient fault conditions caused by the environment or other electrical components.

9.2 Typical Application

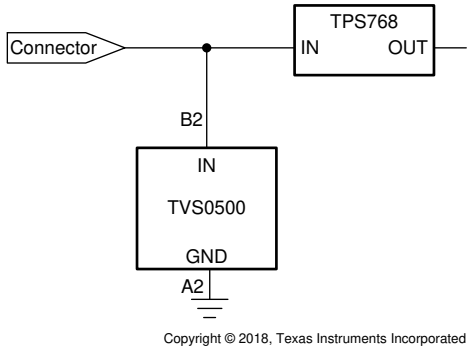


図 10. TVS0500 Application Schematic

9.2.1 Design Requirements

A typical operation for the TVS0500 would be protecting a nominal 5 V input to an LDO similar to 図 10. In this example, the TVS0500 is protecting the input to a TPS768, a standard 1 A LDO with an input voltage range of 2.7 V to 10 V. Without any input protection, if a surge event is caused by lightning, coupling, ringing, or any other fault condition this input voltage will rise to hundreds of volts for multiple microseconds, violating the absolute maximum input voltage and harming the device. An ideal surge protection diode will maximize the useable voltage range while still clamping at a safe level for the system, TI's Flat-Clamp technology provides the best protection solution.

9.2.2 Detailed Design Procedure

If the TVS0500 is in place to protect the device, during a surge event the voltage will rise to the breakdown of the diode at 7.9 V, and then the TVS0500 will turn on, shunting the surge current to ground. With the low dynamic resistance of the TVS0500, large amounts of surge current will have minimal impact on the clamping voltage. The dynamic resistance of the TVS0500 is around 30 mΩ, which means 30 A of surge current will cause a voltage raise of 30 A × 30 mΩ = 0.9 V. Because the device turns on at 7.9 V, this means the LDO input will be exposed to a maximum of 7.9 V + 0.9 V = 8.8 V during surge pulses, well within the absolute maximum input voltage. This ensures robust protection of your circuit.

The small size of the device also improves fault protection by lowering the effect of fault current coupling onto neighboring traces. The small form factor of the TVS0500 allows the device to be placed extremely close to the input connector, lowering the length of the path fault current will take through the system compared to larger protection solutions.

Finally, the low leakage of the TVS0500 will have low input power losses. At 5 V, the device will see typical 70 pA leakage for a constant power dissipation of less than 1 nW, a negligible quantity that will not effect overall efficiency metrics or add heating concerns.

Typical Application (continued)

9.2.3 Configuration Options

The TVS0500 can be used in either unidirectional or bidirectional configuration. 図 10 shows unidirectional usage to protect an input. By placing two TVS0500's in series with reverse orientation, bidirectional operation can be used, allowing a working voltage of ±5 V. TVS0500 operation in bidirectional will be similar to unidirectional operation, with a minor increase in breakdown voltage and clamping voltage. The TVS3300 bidirectional performance has been characterized in the TVS3300 Configurations Characterization. While the TVS0500 in bidirectional configuration has not specifically been characterized, it will have similar relative changes to the TVS3300 in bidirectional configuration.

10 Power Supply Recommendations

The TVS0500 is a clamping device so there is no need to power it. To ensure the device functions properly do not violate the recommended V_{IN} voltage range (0 V to 5 V) .

11 Layout

11.1 Layout Guidelines

The optimum placement is close to the connector. EMI during an ESD event can couple from the trace being struck to other nearby unprotected traces, resulting in early system failures. The PCB designer must minimize the possibility of EMI coupling by keeping any unprotected traces away from the protected traces which are between the TVS and the connector.

Route the protected traces straight.

Eliminate any sharp corners on the protected traces between the TVS0500 and the connector by using rounded corners with the largest radii possible. Electric fields tend to build up on corners, increasing EMI coupling.

11.2 Layout Example

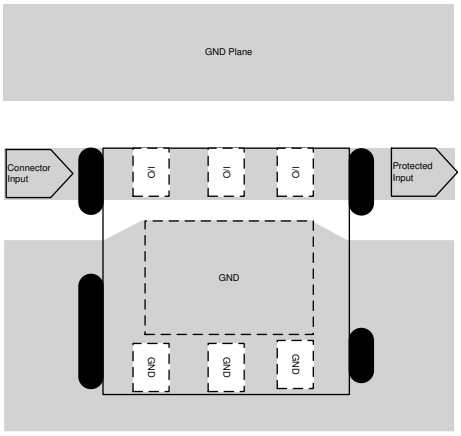

図 11. TVS0500 Layout

13 メカニカル、パッケージ、および注文情報

以降のページには、メカニカル、パッケージ、および注文に関する情報が記載されています。この情報は、そのデバイスについて利用可能な最新のデータです。このデータは予告なく変更されることがあり、ドキュメントが改訂される場合もあります。本データシートのブラウザ版を使用されている場合は、画面左側の説明をご覧ください。

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TVS0500DRVR	ACTIVE	WSON	DRV	6	3000	RoHS & Green	NIPDAU	Level-1-260C-UNLIM	-40 to 125	1HRH	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
