CDCS502 Performance Evaluation Module

This user's guide explains how to use the CDCS502 Performance EVM. The CDCS502 is soldered on the PCB for best performance. This document explains the settings in detail. The CDCS502 Performance EVM is now available.

2 About the CDCS502

The CDCS502 is a spread spectrum capable, fundamental mode crystal oscillator with selectable frequency multiplication.

The crystal frequency is processed by a PLL, whose output frequency is either equal to the input frequency or multiplied by a factor of 4.

The PLL is also able to spread the clock signal by ±0%, ±0.5%, ±1% or ±2% centered on the output clock frequency with a triangular modulation.

By modifying the clock signal, the device can generate output frequencies between 8MHz and 108MHz with or without SSC from a fundamental mode crystal.

In x1 Mode with an SSC amount of 0%, the device works as a standard crystal oscillator and does not make use of the built in PLL.

The CDCS502 operates in 3.3V environment and it is characterized for operation from –40°C to 85°C. The device is offered in an 8 Pin TSSOP package.

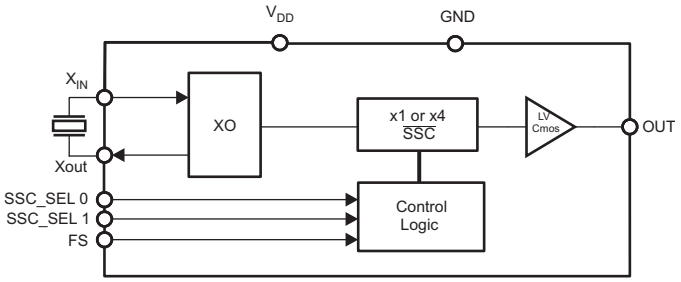

Figure 3. Functional Block Diagram of the CDCS502

3 Quick Start

The following steps allow the user to get started quickly with the EVM.

1. Connect the EVM with the PC with a USB cable or supply 3.3V using connectors J20 and J21.
2. Select the amount of Spread Spectrum and the frequency multiplication using jumpers J32, J33 and J25.
3. The desired output is available on J5

4 EVM Hardware

4.1 Hardware Configuration

This section gives an extended description of the board hardware, providing the user with a comprehensive overview of its configuration. Detailed information regarding onboard jumpers and solder-bridges are included. The user may change the setup and configure the device according to their requirements.

4.1.1 Power Supply

Power for the EVM can be supplied fully with a USB power supply or a stabilized external power supply. The following paragraphs describe how to set the board jumpers for each power supply option.

Note: All EVMs are delivered with USB power supply as default

4.1.1.1 USB Power Supply

Jumper J19 must be on and jumper J17 must be off. With this configuration the DC/DC converter generates the 3.3V necessary for the CDCS502 out of the 5V from the USB connector. Data lines from the USB are not used.

4.1.1.2 External Power Supply

For external power supply jumper J19 must be off. Only with this action an external power supply can be used.

4.1.2 Spread Spectrum Control

Jumpers J32 and J33 set the Spread Spectrum percentage.

J32: SSC_SEL1
J33: SSC_SEL0

4.1.3 Frequency Multiplication Selection

Jumper J25 selects the multiplication factor.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
