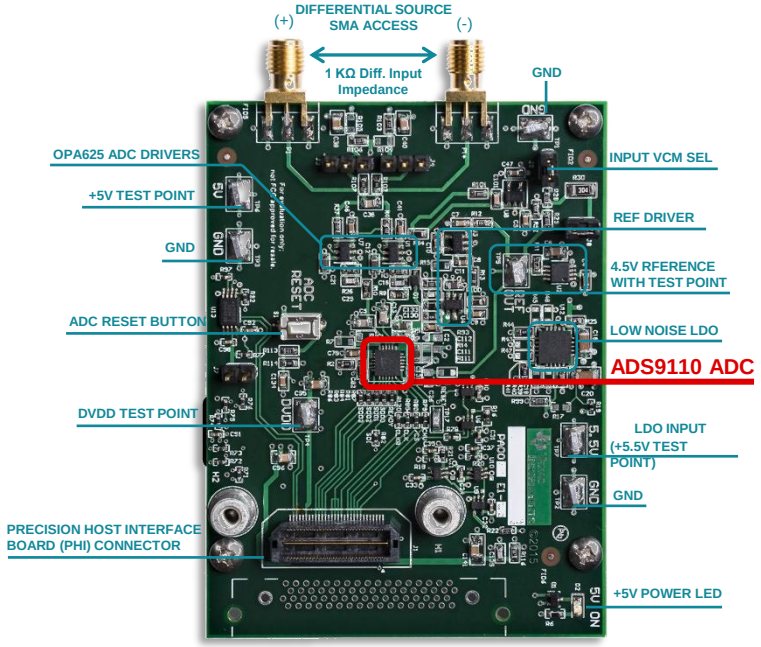
ADS9110 ADC EVM Board



More information about Precision Analog SAR ADCs can be found at http://www.ti.com/precisionadc

Quick Start Guide:

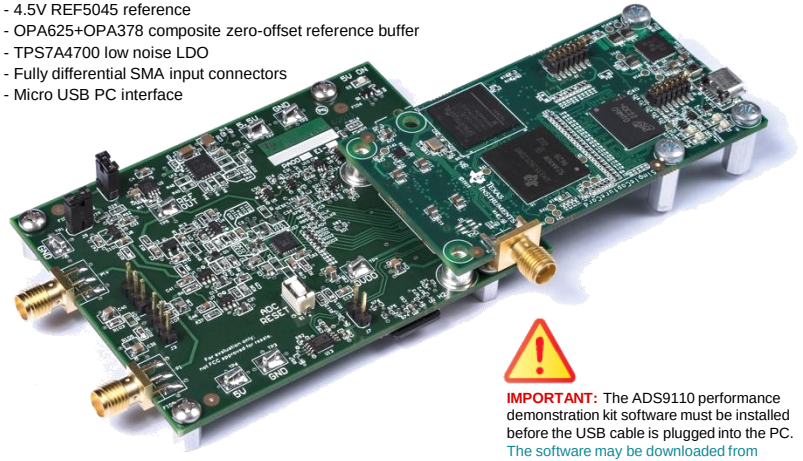
ADS9110EVM-PDK

Texas Instruments

The ADS9110 Performance Demonstration Kit (PDK) is ideal for evaluating and starting development with the ADS9110 precision analog to digital converter. This kit is comprised of a ADC evaluation board (EVM), a precision host interface board (PHI), a micro USB cable and board attachment screws. The EVM features two SMA connectors that support fully differential analog input signals for the ADC. The ADS9110 transfers data to the PHY board via the SPI digital interface. An easy to use PC based application (GUI) is available to help evaluate the performance of the ADC on the ADS9110 EVM.

ADS9110EVM-PDK Features:

- 24pin QFN ADS9110 18-bit, 2 MSPS ADC
- OPA625 low distortion ADC drivers
- 4.5V REF5045 reference
- OPA625+OPA378 composite zero-offset reference buffer
- TPS7A4700 low noise LDO
- Fully differential SMA input connectors
- Micro USB PC interface



IMPORTANT: The ADS9110 performance demonstration kit software must be installed before the USB cable is plugged into the PC. The software may be downloaded from http://www.ti.com/tool/ads9110EVM-PDK

Quick Start Guide: ADS9110 SAR ADC

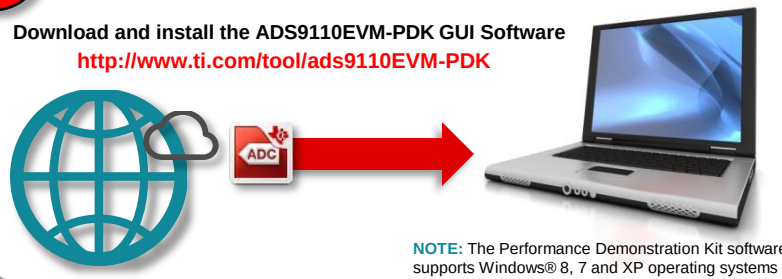
Performance Demonstration Kit

1

IMPORTANT: The ADS9110 performance demonstration kit software must be installed before the USB cable is plugged into the PC.

Download and install the ADS9110EVM-PDK GUI Software

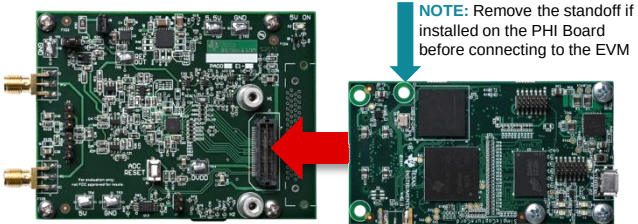
http://www.ti.com/tool/ads9110EVM-PDK



NOTE: The Performance Demonstration Kit software supports Windows® 8, 7 and XP operating systems

2

Connect the Precision Host Interface (PHI) Board to the ADS9110 EVM Board



ADS9110 EVM Board

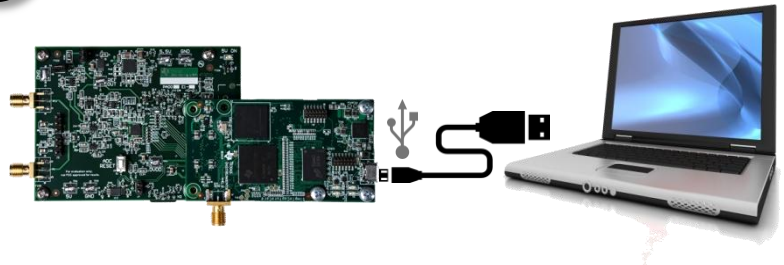
NOTE: Remove the standoff if installed on the PHI Board before connecting to the EVM

Precision Host Interface (PHI) Board

IMPORTANT: The included screws should be used to make a secure connection between the two boards to avoid damage.

3

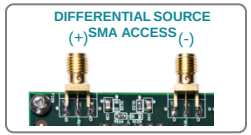
Connect the micro USB cable to the Precision Host Interface Board and the PC



4

Launch the ADS9110EVM-PDK GUI software on the PC from the 'Start' menu

A differential input signal can be connected to the EVM's SMA connectors and conversion results can be viewed using the GUI software.



The GUI software also include data analysis tools to evaluate the ADC's DC and AC parameters.

Technical support for Precision ADCs can be found at http://www.ti.com/precisionadcsupport

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as “components”) are sold subject to TI’s terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI’s terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers’ products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers’ products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI’s goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or “enhanced plastic” are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have ***not*** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
