

THVD24x9 3V to 5.5V RS-485 Transceivers With Integrated Surge and High Bus-Fault Protection in Small Packages

1 Features

- Meets or exceeds the requirements of the TIA/EIA-485A standard
- 3V to 5.5V Supply Voltage
- Industry's smallest surge-integrated RS-485 device in 9mm² package
- V_{IO} Support from 1.65V to V_{CC} supply level
- Bus I/O protection
 - ±3kV/42Ω IEC 61000-4-5 1.2/50μs surge (SOIC)
 - ±1.5kV/42Ω IEC 61000-4-5 1.2/50μs surge (VSON)
 - ±8kV IEC 61000-4-2 Contact discharge
 - ±4kV IEC 61000-4-4 Electrical fast transient
 - ±15kV HBM ESD
 - ±42V DC bus fault
- Available in two speed grades
 - THVD2419: 250kbps
 - THVD2429: 20Mbps
- Extended ambient temperature range: -40°C to 125°C
- Extended operational common-mode range: ±25V
- Large receiver hysteresis for noise rejection
- Low power consumption in shutdown mode: < 5μA
- Glitch-free power-up and down for hot plug-in capability
- Open, short, and idle bus failsafe
- 1/8 Unit load (up to 256 bus nodes)
- Industry standard 8-pin SOIC for drop-in compatibility
- Small surge-integrated RS-485 device in 3mm x 3mm leadless (VSON) package

3 Description

THVD24x9 devices are half-duplex RS-485 transceivers with integrated surge protection. Surge protection is achieved by integrating transient voltage suppressor (TVS) diodes in the standard 8-pin SOIC (D) package as well as small 10-pin VSON package. This feature increases the reliability by providing better immunity to noise transients coupled to the data cable which eliminates the need for external protection components.

THVD24x9 devices in the standard pin-out SOIC package operate from a single 3.3V or 5V supply. In addition, THVD24x9 devices in 10-pin VSON package support an additional V_{IO} supply to operate the IOs from as low as 1.65V supply level. The devices in this family feature a wide common-mode voltage range making them suitable for multi-point applications over long cable runs.

Package Information

| PART NUMBER | PACKAGE ⁽¹⁾ | PACKAGE SIZE ⁽²⁾ |
|-------------|------------------------|-----------------------------|
| THVD2419 | SOIC (8) | 4.9mm × 6mm |
| THVD2429 | VSON (10) | 3mm × 3mm |

(1) For more information, see [Section 12](#).

(2) The package size (length × width) is a nominal value and includes pins, where applicable.

5 Pin Configuration and Functions

**Figure 5-1. THVD2419, THVD2429, 8-Pin (SOIC)
(Top View)**

**Figure 5-2. THVD2419, THVD2429, 10-Pin (VSON)
(Top View)**

| NAME | PIN | | TYPE | DESCRIPTION |
|-----------------|--------|---------|------|--|
| | SOIC-8 | VSON-10 | | |
| V _{IO} | - | 1 | P | 1.8V to 5V supply for R, D, and \overline{RE} and DE |
| R | 1 | 2 | O | Receiver data output |
| \overline{RE} | 2 | 4 | I | Receiver enable, active low (integrated pull-up) |
| DE | 3 | 3 | I | Driver enable, active high (integrated pull-down) |
| D | 4 | 5 | I | Driver data input (integrated pull-up) |
| GND | 5 | 6, 7 | - | Device ground |
| A | 6 | 8 | I/O | Bus I/O port, A (complementary to B) |
| B | 7 | 9 | I/O | Bus I/O port, B (complementary to A) |
| V _{CC} | 8 | 10 | P | 3.3V to 5V supply for the device |

6 Specifications

6.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)⁽¹⁾

| | | MIN | MAX | UNIT |
|-------------------------|--|------|----------------|------|
| Logic supply voltage | V_{IO} | -0.5 | $V_{CC} + 0.2$ | V |
| Bus supply voltage | V_{CC} | -0.5 | 6.5 | V |
| Bus voltage | Range at any bus pin (A or B) as differential or common-mode with respect to GND | -42 | 42 | V |
| Input voltage | Range at any logic pin (D, DE, SLR or \overline{RE}) for devices with VIO pin | -0.3 | $V_{IO} + 0.2$ | V |
| Input voltage | Range at any logic pin (D, DE, SLR or RE) for devices with no VIO pin | -0.3 | $V_{CC} + 0.2$ | V |
| Receiver output current | I_O | -24 | 24 | mA |
| Storage temperature | T_{stg} | -65 | 170 | °C |

- (1) Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If used outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime.

6.2 ESD Ratings

| | | | VALUE | UNIT | |
|-------------|-------------------------|--|---------------------------------------|---------|---|
| $V_{(ESD)}$ | Electrostatic discharge | Human-body model (HBM), per ANSI/ESDA/ JEDEC JS-001 ⁽¹⁾ | Bus terminals and GND | ±16,000 | V |
| | | | All pins except bus terminals and GND | ±4,000 | V |
| | | Charged-device model (CDM), per JEDEC specification JESD22-C101 ⁽²⁾ | | ±1,500 | V |

- (1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
 (2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

6.3 ESD Ratings - IEC Specifications

| | | | | VALUE | UNIT |
|---------------|--|---|-----------------------|---------|------|
| $V_{(ESD)}$ | Electrostatic discharge, bus terminals | Contact discharge, per IEC 61000-4-2 ⁽¹⁾ | Bus terminals and GND | ±8,000 | V |
| | | Air-gap discharge, per IEC 61000-4-2 ⁽¹⁾ | Bus terminals and GND | ±15,000 | |
| $V_{(SURGE)}$ | Surge | Per IEC 61000-4-5, 1.2/50-8/20µs CWG (DRC Package) | Bus terminals and GND | ±1500 | V |
| $V_{(SURGE)}$ | Surge | Per IEC 61000-4-5, 1.2/50-8/20µs CWG (D Package) | Bus terminals and GND | ±3,000 | V |

- (1) For optimised IEC ESD performance, it is recommended to have series resistor ($\geq 50 \Omega$) on all logic inputs to minimize transient currents going into or out of the logic pins.

6.4 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

| | | MIN | NOM | MAX | UNIT |
|-------------------|--|----------|-----|-----------------|-----------------|
| V _{CC} | Supply voltage | 3 | | 5.5 | V |
| V _{IO} | I/O supply voltage (devices with VIO pin) | 1.65 | | V _{CC} | V |
| V _{IH} | High-level input voltage (D, DE, RE) | 0.7 | | 1 | V _{IO} |
| V _{IL} | Low-level input voltage (D, DE, RE) | | | | |
| V _{IH} | High-level input voltage (D, DE, RE) | 0.7 | | 1 | V _{CC} |
| V _{IL} | Low-level input voltage (D, DE, RE) | | | | |
| V _I | Input voltage at any bus terminal (separately or common mode) ⁽¹⁾ | -25 | | 25 | V |
| V _{ID} | Differential input voltage | -25 | | 25 | V |
| I _O | Output current, driver | -60 | | 60 | mA |
| I _{OR} | Output current, receiver | -4 | | 4 | mA |
| I _{OR} | Output current, receiver | -8 | | 8 | mA |
| R _L | Differential load resistance | 54 | 60 | | Ω |
| 1/t _{UI} | Signaling rate | THVD2419 | | 250 | kbps |
| | | THVD2429 | | 20 | Mbps |
| T _A | Operating ambient temperature | -40 | | 125 | °C |
| T _J | Junction temperature | -40 | | 150 | °C |

(1) The algebraic convention, in which the least positive (most negative) limit is designated as minimum is used in this data sheet.

6.5 Thermal Information

| THERMAL METRIC ⁽¹⁾ | | THVD2419, THVD2429 | | UNIT |
|-------------------------------|--|--------------------|----------|------|
| | | DRC (VSON) | D (SOIC) | |
| | | 10 PINS | 8 PINS | |
| R _{θJA} | Junction-to-ambient thermal resistance | 65.2 | 117.2 | °C/W |
| R _{θJC(top)} | Junction-to-case (top) thermal resistance | 41.7 | 40.2 | °C/W |
| R _{θJB} | Junction-to-board thermal resistance | 36.4 | 65.3 | °C/W |
| ψ _{JT} | Junction-to-top characterization parameter | 1.4 | 3.3 | °C/W |
| ψ _{JB} | Junction-to-board characterization parameter | 36.3 | 64.4 | °C/W |
| R _{θJC(bot)} | Junction-to-case (bottom) thermal resistance | 24.9 | N/A | °C/W |

(1) For more information about traditional and new thermal metrics, see the [Semiconductor and IC Package Thermal Metrics](#) application report.

6.6 Power Dissipation

| PARAMETER | | TEST CONDITIONS | | VALUE | UNIT | |
|----------------|--|---|----------|---------|------|----|
| P _D | Driver and receiver enabled, V _{CC} = 5.5 V, T _A = 125 °C, square wave at 50% duty cycle | Unterminated R _L = 300Ω, C _L = 50pF (driver) | THVD2419 | 250kbps | 180 | mW |
| | | | THVD2429 | 20Mbps | 310 | |
| | | RS-422 load R _L = 100Ω, C _L = 50pF (driver) | THVD2419 | 250kbps | 180 | mW |
| | | | THVD2429 | 20Mbps | 310 | |
| | | RS-485 load R _L = 54Ω, C _L = 50pF (driver) | THVD2419 | 250kbps | 270 | mW |
| | | | THVD2429 | 20Mbps | 325 | |

6.7 Electrical Characteristics

over operating free-air temperature range (unless otherwise noted). All typical values are at 25°C and supply voltage of $V_{CC} = 5V$, $V_{IO} = 3.3V$, unless otherwise noted.

| PARAMETER | | TEST CONDITIONS | MIN | TYP | MAX | UNIT |
|---------------------------|---|---|----------------|----------------|------|---------|
| Driver | | | | | | |
| $ V_{OD} $ | Driver differential output voltage magnitude | $R_L = 60\Omega$, $-25V \leq V_{test} \leq 25V$ (See Figure 7-1) | 1.5 | 2.8 | | V |
| | | $R_L = 60\Omega$, $-25V \leq V_{test} \leq 25V$, $4.5V \leq V_{CC} \leq 5.5V$ (See Figure 7-1) | 2.1 | 3.3 | | V |
| | | $R_L = 100\Omega$ (See Figure 7-2) | 2 | 2.9 | | V |
| | | $R_L = 54\Omega$ (See Figure 7-2) | 1.5 | 2.5 | | V |
| $\Delta V_{OD} $ | Change in differential output voltage | | -50 | | 50 | mV |
| V_{OC} | Common-mode output voltage | $R_L = 54\Omega$ or 100Ω (See Figure 7-2) | 1 | $V_{CC}/2$ | 3 | V |
| $\Delta V_{OC(SS)}$ | Change in steady-state common-mode output voltage | | -50 | | 50 | mV |
| I_{OS} | Short-circuit output current | $DE = V_{IO}$, $-42V \leq (V_A \text{ or } V_B) \leq 42V$, or A shorted to B | -250 | | 250 | mA |
| Receiver | | | | | | |
| I_I | Bus input current | $DE = 0V$, V_{CC} and $V_{IO} = 0V$ or $5.5V$ | $V_I = 12V$ | 90 | 125 | μA |
| | | | $V_I = 25V$ | 200 | 250 | μA |
| | | | $V_I = -7V$ | -100 | -80 | μA |
| | | | $V_I = -25V$ | -350 | -240 | μA |
| V_{TH+} | Positive-going input threshold voltage ⁽¹⁾ | Over common-mode range of $\pm 25V$ | 20 | 125 | 200 | mV |
| V_{TH-} | Negative-going input threshold voltage ⁽¹⁾ | | -200 | -125 | -20 | mV |
| V_{HYS} | Input hysteresis | | 250 | | | mV |
| V_{TH_FSH} | Input fail-safe threshold | | -20 | | 20 | mV |
| $C_{A,B}$ | Input differential capacitance | Measured between A and B, $f = 1MHz$ | | 50 | | pF |
| V_{OH} | Output high voltage | $I_{OH} = -8mA$, $V_{IO} = 3$ to $3.6V$ or $4.5V$ to $5.5V$ | $V_{IO} - 0.4$ | $V_{IO} - 0.2$ | | V |
| V_{OL} | Output low voltage | $I_{OL} = 8mA$, $V_{IO} = 3$ to $3.6V$ or $4.5V$ to $5.5V$ | | 0.2 | 0.4 | V |
| V_{OH} | Output high voltage | $I_{OH} = -4mA$, $V_{IO} = 1.65$ to $1.95V$ or $2.25V$ to $2.75V$ | $V_{IO} - 0.4$ | $V_{IO} - 0.2$ | | V |
| V_{OL} | Output low voltage | $I_{OL} = 4mA$, $V_{IO} = 1.65$ to $1.95V$ or $2.25V$ to $2.75V$ | | 0.2 | 0.4 | V |
| I_{OZ} | Output high-impedance current, R pin | $V_O = 0V$ or V_{IO} , $\bar{RE} = V_{IO}$ | -1 | | 1 | μA |
| Logic | | | | | | |
| I_{IN} | Input current (DE, SLR) | DRC: $1.65V \leq V_{IO} \leq 5.5V$, $0V \leq V_{IN} \leq V_{IO}$ D: $3V \leq V_{CC} \leq 5.5V$, $0V \leq V_{IN} \leq 5.5V$ | | | 5 | μA |
| I_{IN} | Input current (D, \bar{RE}) | DRC: $1.65V \leq V_{IO} \leq 5.5V$, $0V \leq V_{IN} \leq V_{IO}$ D: $3V \leq V_{CC} \leq 5.5V$, $0V \leq V_{IN} \leq 5.5V$ | -5 | | | μA |
| Thermal Protection | | | | | | |
| T_{SHDN} | Thermal shutdown threshold | Temperature rising | 150 | 180 | | °C |
| T_{HYS} | Thermal shutdown hysteresis | | | 10 | | °C |
| Supply | | | | | | |
| UV_{VCC} (rising) | Rising under-voltage threshold on V_{CC} | | | 2.3 | 2.6 | V |
| UV_{VCC} (falling) | Falling under-voltage threshold on V_{CC} | | 1.95 | 2.2 | | V |
| $UV_{VCC(hys)}$ | Hysteresis on under-voltage of V_{CC} | | | 150 | | mV |
| UV_{VIO} (rising) | Rising under-voltage threshold on V_{IO} | | | 1.4 | 1.6 | V |
| UV_{VIO} (falling) | Falling under-voltage threshold on V_{IO} | | 1.2 | 1.3 | | V |

6.7 Electrical Characteristics (continued)

over operating free-air temperature range (unless otherwise noted). All typical values are at 25°C and supply voltage of $V_{CC} = 5V$, $V_{IO} = 3.3V$, unless otherwise noted.

| PARAMETER | | TEST CONDITIONS | | MIN | TYP | MAX | UNIT |
|-----------------|---|--|---|-----|-----|-----|---------|
| $UV_{VIO(hys)}$ | Hysteresis on under-voltage of V_{IO} | | | | 120 | | mV |
| I_{CC} | Supply current (quiescent), $V_{CC} = 4.5V$ to $5.5V$ | Driver and receiver enabled | $\overline{RE} = 0V$, $DE = V_{IO}$, No load | 3.5 | 5.7 | | mA |
| | | Driver enabled, receiver disabled | $\overline{RE} = V_{IO}$, $DE = V_{IO}$, No load | 2.5 | 4.4 | | mA |
| | | Driver disabled, receiver enabled | $\overline{RE} = 0V$, $DE = 0V$, No load | 1.8 | 2.4 | | mA |
| | | Driver and receiver disabled (devices without VIO pin) | $\overline{RE} = V_{CC}$, $DE = 0V$, $D = open$, No load | 1.7 | 5 | | μA |
| | | Driver and receiver disabled (devices with VIO pin) | $\overline{RE} = V_{IO}$, $DE = 0V$, $D = open$, No load | 0.1 | 3 | | μA |
| I_{CC} | Supply current (quiescent), $V_{CC} = 3V$ to $3.6V$ | Driver and receiver enabled | $\overline{RE} = 0V$, $DE = V_{IO}$, No load | 3 | 4.6 | | mA |
| | | Driver enabled, receiver disabled | $\overline{RE} = V_{IO}$, $DE = V_{IO}$, No load | 2.2 | 3.3 | | mA |
| | | Driver disabled, receiver enabled | $\overline{RE} = 0V$, $DE = 0V$, No load | 1.6 | 2.2 | | mA |
| | | Driver and receiver disabled (Devices without VIO pin) | $\overline{RE} = V_{CC}$, $DE = 0V$, $D = open$, No load | 1 | 4 | | μA |
| | | Driver and receiver disabled (Devices with VIO pin) | $\overline{RE} = V_{IO}$, $DE = 0V$, $D = open$, No load | 1 | 2 | | μA |
| I_{IO} | Logic supply current (quiescent), $V_{IO} = 3$ to $3.6V$, Devices with VIO pin | Driver disabled, Receiver enabled | $DE = 0V$, $\overline{RE} = 0V$, No load | 3.3 | 8.4 | | μA |
| | | Driver disabled, Receiver disabled | $DE = 0V$, $\overline{RE} = V_{IO}$, No load | 0.1 | 2 | | μA |

(1) Under any specific conditions, V_{TH+} is assured to be at least V_{HYS} higher than V_{TH-} .

6.8 Switching Characteristics 250kbps

250kbps (THVD2419) over recommended operating conditions. All typical values are at 25°C and supply voltage of $V_{CC} = 5V$, $V_{IO} = 3.3V$, unless otherwise noted. ⁽¹⁾

| PARAMETER | | TEST CONDITIONS | | MIN | TYP | MAX | UNIT | |
|--------------------------|------------------------------------|---|---|-----|-----|------|---------|---------|
| Driver | | | | | | | | |

8 Detailed Description

8.1 Overview

THVD24x9 devices are surge-protected, half duplex RS-485 transceivers available in two speed grades suitable for data transmission up to 250kbps and 20Mbps respectively. Surge protection is achieved by integrating transient voltage suppressor (TVS) diodes in the standard 8-pin SOIC (D) package and a small 10-pin leadless package.

THVD2419 and THVD2429 devices have active-high driver enables and active-low receiver enables. A low standby current can be achieved by disabling both driver and receiver.

8.2 Functional Block Diagrams

Figure 8-1. THVD2419 and THVD2429 Block Diagram (SOIC Package)

Figure 8-2. THVD2419 and THVD2429 Block Diagram (VSON Package)

8.3 Feature Description

8.3.1 Electrostatic Discharge (ESD) Protection

The bus pins of the THVD24x9 transceiver family include on-chip ESD protection against $\pm 15\text{kV}$ HBM and $\pm 8\text{kV}$ IEC 61000-4-2 contact discharge. The International Electrotechnical Commission (IEC) ESD test is far more severe than the HBM ESD test. The 50% higher charge capacitance, $C_{(S)}$, and 78% lower discharge resistance, $R_{(D)}$, of the IEC model produce significantly higher discharge currents than the HBM model. As stated in the IEC 61000-4-2 standard, contact discharge is the preferred transient protection test method.

Figure 8-3. HBM and IEC ESD Models and Currents in Comparison (HBM Values in Parenthesis)

The on-chip implementation of IEC ESD protection significantly increases the robustness of equipment. Common discharge events occur because of human contact with connectors and cables.

8.3.2 Electrical Fast Transient (EFT) Protection

Inductive loads such as relays, switch contactors, or heavy-duty motors can create high-frequency bursts during transition. The IEC 61000-4-4 test is intended to simulate the transients created by such switching of inductive loads on AC power lines. Figure 8-4 shows the voltage waveforms in to 50 Ω termination as defined by the IEC standard.

Figure 8-4. EFT Voltage Waveforms

Internal ESD protection circuits of the THVD24x9 protect the transceivers against $\pm 4\text{kV}$ EFT. With careful system design, one could achieve EFT Criterion A (no data loss when transient noise is present).

8.3.3 Surge Protection

Surge transients often result from lightning strikes (direct strike or an indirect strike which induce voltages and currents), or the switching of power systems, including load changes and short circuit switching. These transients are often encountered in industrial environments, such as factory automation and power-grid systems.

Figure 8-5 compares the pulse-power of the EFT and surge transients with the power caused by an IEC ESD transient. The diagram on the left shows the relative pulse-power for a 0.5kV surge transient and 4kV EFT transient, both of which dwarf the 10kV ESD transient visible in the lower-left corner. 500V surge transients are representative of events that may occur in factory environments in industrial and process automation.

The diagram on the right shows the pulse-power of a 6kV surge transient, relative to the same 0.5kV surge transient. 6kV surge transients are most likely to occur in power generation and power-grid systems.

Figure 8-5. Power Comparison of ESD, EFT, and Surge Transients

Figure 8-6 shows the test setup used to validate THVD24x9 surge performance according to the IEC 61000-4-5 1.2/50μs surge pulse.

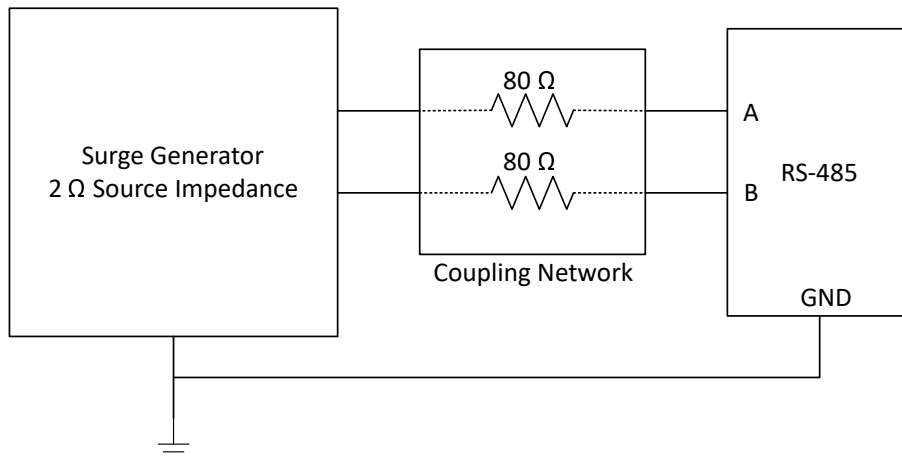

Figure 8-6. THVD24x9 Surge Test Setup

THVD24x9 product family is robust up to $\pm 3\text{kV}$ surge transients without the need for any external components. The bus pin voltage is clamped by the integrated surge protection diodes such that the internal circuitry is not damaged during the surge event.

8.3.4 Enhanced Receiver Noise Immunity

The differential receivers of THVD24x9 family feature fully symmetric thresholds to maintain duty cycle of the signal even with small input amplitudes. In addition, 250mV (typical) hysteresis displays excellent noise immunity.

8.3.5 Failsafe Receiver

The differential receivers of the THVD24x9 family are failsafe to invalid bus states caused by the following:

- Open bus conditions, such as a disconnected connector
- Shorted bus conditions, such as cable damage shorting the twisted-pair together
- Idle bus conditions that occur when no driver on the bus is actively driving

In any of these cases, the receiver outputs a fail-safe logic high state if the input amplitude stays for longer than $t_{D(OFS)}$ at less than $|V_{TH_FSH}|$.

8.4 Device Functional Modes

When the driver enable pin, DE, is logic high, the differential outputs A and B follow the logic states at data input D. A logic high at D causes A to turn high and B to turn low. The differential output voltage defined as $V_{OD} = V_A - V_B$ is positive. When D is low, the output states reverse: B turns high, A becomes low, and V_{OD} is negative.

When DE is low, both outputs turn high-impedance. In this condition the logic state at D is irrelevant. The DE pin has an internal pull-down resistor to ground. When left open the driver is disabled (high-impedance) by default. The D pin has an internal pull-up resistor to V_{CC} ; thus, when left open while the driver is enabled, output A turns high and B turns low.

Table 8-1. Driver Function Table

| INPUT | ENABLE | OUTPUTS | | FUNCTION |
|-------|--------|---------|---|------------------------------------|
| | | A | B | |
| H | H | H | L | Actively drive bus high |
| L | H | L | H | Actively drive bus low |
| X | L | Z | Z | Driver disabled |
| X | OPEN | Z | Z | Driver disabled by default |
| OPEN | H | H | L | Actively drive bus high by default |

When the receiver enable pin, \overline{RE} , is logic low, the receiver is enabled. When the differential input voltage defined as $V_{ID} = V_A - V_B$ is higher than the positive input threshold, V_{TH+} , the receiver output, R, turns high. When V_{ID} is lower than the negative input threshold, V_{TH-} , the receiver output, R, turns low. If V_{ID} is between V_{TH+} and V_{TH-} the output is indeterminate.

When \overline{RE} is logic high or left open, the receiver output is high-impedance and the magnitude and polarity of V_{ID} are irrelevant. Internal biasing of the receiver inputs causes the output to go failsafe-high when the transceiver is disconnected from the bus (open-circuit), the bus lines are shorted to one another (short-circuit), or the bus is not actively driven (idle bus).

Table 8-2. Receiver Function Table

| DIFFERENTIAL INPUT | ENABLE | OUTPUT | FUNCTION |
|------------------------------|-----------------|---------------|------------------------------|
| $V_{ID} = V_A - V_B$ | \overline{RE} | R | |
| $V_{TH+} < V_{ID}$ | L | H | Receive valid bus high |
| $V_{TH-} < V_{ID} < V_{TH+}$ | L | Indeterminate | Indeterminate bus state |
| $V_{ID} < V_{TH-}$ | L | L | Receive valid bus low |
| X | H | Z | Receiver disabled |
| X | OPEN | Z | Receiver disabled by default |
| Open-circuit bus | L | H | Fail-safe high output |
| Short-circuit bus | L | H | Fail-safe high output |
| Idle (terminated) bus | L | H | Fail-safe high output |

9 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes, as well as validating and testing their design implementation to confirm system functionality.

9.1 Application Information

THVD24x9 are half-duplex RS-485 transceivers with integrated system-level surge protection. Standard 8-pin SOIC (D) package allows drop-in replacement into existing systems and eliminate system-level protection components.

9.2 Typical Application

An RS-485 bus consists of multiple transceivers connecting in parallel to a bus cable. To eliminate line reflections, each cable end is terminated with a termination resistor, R_T , with a value that matches the characteristic impedance, Z_0 , of the cable. This method, known as parallel termination, allows for higher data rates over longer cable length.

Figure 9-1. Typical RS-485 Network With Half-Duplex Transceivers

9.2.1 Design Requirements

RS-485 is a robust electrical standard suitable for long-distance networking that may be used in a wide range of applications with varying requirements, such as distance, data rate, and number of nodes.

9.2.1.1 Data Rate and Bus Length

There is an inverse relationship between data rate and cable length, which means the higher the data rate, the shorter the cable length; and conversely, the lower the data rate, the longer the cable length. While most RS-485 systems use data rates between 10kbps and 100kbps, some applications require data rates up to 250kbps at distances of 4000 feet and longer. Longer distances are possible by allowing for small signal jitter of up to 5 or 10%.

Figure 9-2. Cable Length vs Data Rate Characteristic

Even higher data rates are achievable (that is, 20Mbps for the THVD2429) in cases where the interconnect is short enough (or has suitably low attenuation at signal frequencies) to not degrade the data.

9.2.1.2 Stub Length

When connecting a node to the bus, the distance between the transceiver inputs and the cable trunk, known as the stub, should be as short as possible. Stubs present a non-terminated piece of bus line which can introduce reflections as the length of the stub increases. As a general guideline, the electrical length, or round-trip delay, of a stub should be less than one-tenth of the rise time of the driver, thus giving a maximum physical stub length as shown in Equation 1.

$$L_{(STUB)} \leq 0.1 \times t_r \times v \times c \tag{1}$$

where

- t_r is the 10/90 rise time of the driver
- c is the speed of light (3×10^8 m/s)
- v is the signal velocity of the cable or trace as a factor of c

9.2.1.3 Bus Loading

The RS-485 standard specifies that a compliant driver must be able to driver 32 unit loads (UL), where 1 unit load represents a load impedance of approximately 12kΩ. Because the THVD24x9 devices consist of 1/8 UL transceivers, connecting up to 256 receivers to the bus is possible.

9.2.2 Detailed Design Procedure

RS-485 transceivers operate in noisy industrial environments typically require surge protection at the bus pins. [Figure 9-3](#) compares the surge protection implementation with a regular RS-485 transceiver (a), against that with a surge-integrated RS-485 transceiver (b), such as the THVD24x9 family. The internal TVS protection of the THVD24x9 achieves up to $\pm 3\text{kV}$ IEC 61000-4-5 surge protection (SOIC package) without any additional external components, reducing system level bill of materials.

9.3 Power Supply Recommendations

For reliable operation at all data rates and supply voltages, each supply should be decoupled with a 100nF ceramic capacitor located as close to the supply pins as possible. This helps to reduce supply voltage ripple present on the outputs of switched-mode power supplies and also helps to compensate for the resistance and inductance of the PCB power planes.

9.4 Layout

9.4.1 Layout Guidelines

Additional external protection components generally are not needed when using THVD24x9 transceivers.

1. Use V_{CC}/V_{IO} and ground planes to provide low-inductance. Note that high-frequency currents tend to follow the path of least impedance and not the path of least resistance. Apply 100nF to 220nF decoupling capacitors as close as possible to the V_{CC}/V_{IO} pins of transceiver, UART and/or controller ICs on the board.
2. Use at least two vias for V_{CC}/V_{IO} and ground connections of decoupling capacitors to minimize effective via inductance.
3. Use 1k Ω to 10k Ω pull-up and pull-down resistors for enable lines to limit noise currents in these lines during transient events.

9.4.2 Layout Example

10.3 Support Resources

[TI E2E™ support forums](#) are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's [Terms of Use](#).

10.4 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

10.5 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

| THVD2429DRCR | ACTIVE | VSON | DRC | 10 | 5000 | RoHS & Green | NIPDAU | Level-2-260C-1 YEAR | -40 to 125 | T2429 | Samples |

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.
