TAS2505 2.6W Digital/Analog Input Class-D Speaker Amplifier With Audio Processing

1 Features

- Mono class-D BTL speaker amplifier
  - 2.6W at 10% THD_N (4Ω, 5.5V)
  - 1.7W at 10% THD+N (8Ω, 5.5V)
- Supports both digital and analog input
- Single supply 2.7V to 5.5V
- Load diagnostic functions:
  - Output-to-GND Short
  - Terminal-to-terminal short
  - Output-to-power short
  - Over temperature
  - Input DC
- Supports 9kHz to 96kHz sample rates
- Two single-ended inputs with output mixing and level control
- Embedded power-on-reset
- Programmable digital audio processing:
  - Bass boost
  - Treble
  - EQ (up to 6 biquads)
- I^2S, Left-justified, right-justified, DSP, and TDM audio interfaces
- I^2C and SPI Control With Auto-Increment
- 24-Pin, VQFN package

2 Applications

- Instrument Cluster
- Automotive Emergency Call (eCall)
- Telematics

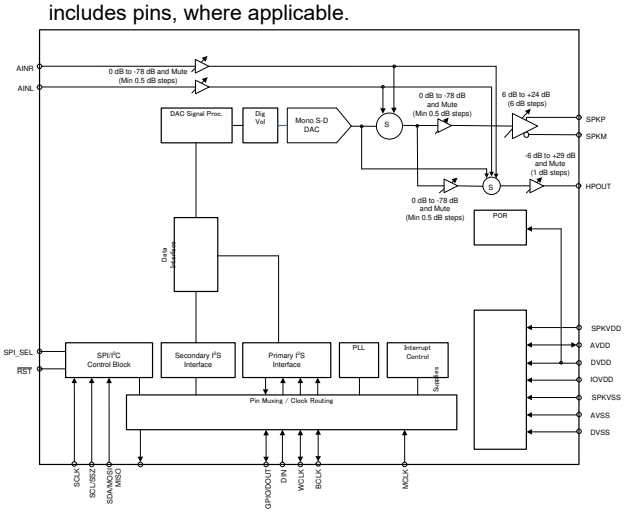
3 Description

The TAS2505 is a mono Class-D speaker amp that supports both Digital and Analog inputs. The device is designed for automotive instrument cluster, emergency call (eCall), and telematics applications. Direct I^2S input removes the need for an external DAC in the audio signal path. In addition to integration, the device features programmable audio processing. The onboard DSP supports bass boost, treble, and EQ (up to 6 biquads). An on-chip PLL provides the high-speed clock needed by the DSP. The volume level is register controlled.

Device Information (1)

PART NUMBER	PACKAGE	PACKAGE SIZE (2)
TAS2505	VQFN (24)	4.00mm × 4.00mm
TAS2505A-Q1	VQFN (24)	4.00mm × 4.00mm

(1) For all available packages, see the orderable addendum at the end of the data sheet.
(2) The package size (length × width) is a nominal value and includes pins, where applicable.



Simplified Block Diagram

Table of Contents

4 Pin Configuration and Functions

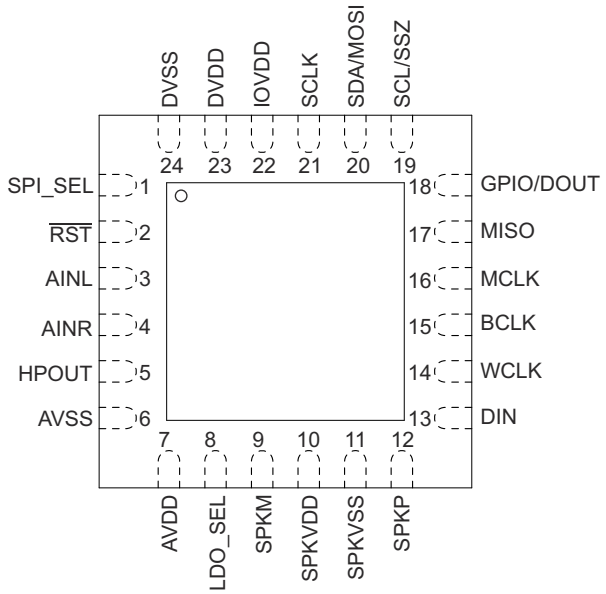


Figure 4-1. RGE Package 24-Pin VQFN Top View

Table 4-1. Pin Functions

PIN		TYPE(1)	DESCRIPTION
NO.	NAME		
1	SPI_SEL	I	Selects between SPI and I²C digital interface modes; (1 = SPI mode) (0 = I²C mode)
2	$\overline{\text{RST}}$	I	Reset for logic, state machines, and digital filters; asserted LOW.
3	AINL	I	Analog single-ended line left input
4	AINR	I	Analog single-ended line right input
5	NC	O	No Connect (Leave unconnected)
6	AVSS	GND	Analog Ground, 0V
7	AVDD	PWR	Analog Core Supply Voltage, 1.5V to 1.95V
8	LDO_SEL	I	Connect to ground.
9	SPKM	O	Class-D speaker driver inverting output
10	SPKVDD	PWR	Class-D speaker driver power supply
11	SPKVSS	PWR	Class-D speaker driver power supply ground supply
12	SPKP	O	Class-D speaker driver noninverting output
13	DIN	I	Audio Serial Data Bus Input Data
14	WCLK	I/O	Audio Serial Data Bus Word Clock
15	BCLK	I/O	Audio Serial Data Bus Bit Clock
16	MCLK	I	Master CLK Input / Reference CLK for CLK Multiplier - PLL (On startup PLLCLK = CLKIN)
17	MISO	O	SPI Serial Data Output
18	GPIO/DOUT	I/O/Z	GPIO / Audio Serial Bus Output
19	SCL/SSZ	I	Either I²C Input Serial Clock or SPI Chip Select Signal depending on SPI_SEL state
20	SDA/MOSI	I	Either I²C Serial Data Input or SPI Serial Data Input depending on SPI_SEL state.
21	SCLK	I	Serial clock for SPI interface
22	IOVDD	PWR	I/O Power Supply, 1.1V to 3.6V
23	DVDD	PWR	Digital Power Supply, 1.65V to 1.95V
24	DVSS	GND	Digital Ground, 0V

(1) I = Input, O = Output, GND = Ground, PWR = Power, Z = High Impedance

5 Specifications

5.1 Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted) (1)

	MIN	MAX	UNIT
AVDD to AVSS	–0.3	2.2	V
DVDD to DVSS	–0.3	2.2	V
SPKVDD to SPKVSS	–0.3	6	V
IOVDD to IOVSS	–0.3	3.9	V
Digital input voltage	IOVSS – 0.3	IOVDD + 0.3	V
Analog input voltage	AVSS – 0.3	AVDD + 0.3	V
Operating temperature	–40	85	°C
Junction temperature, T_J Max		105	°C
Power dissipation for VQFN package (with thermal pad soldered to board)	(T_J Max – T_A) / θ_{JA}		W
Storage temperature, T_{stg}	–55	150	°C

(1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

5.2 ESD Ratings

			VALUE	UNIT
$V_{(ESD)}$	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001(1)	±500	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101(2)	±250	

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.
(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

5.3 Recommended Operating Conditions

over operating free-air temperature range (unless otherwise noted)

			MIN	NOM	MAX	UNIT
AVDD(2)	Power-supply voltage	Referenced to AVSS(1)	1.5	1.8	1.95	V
DVDD		Referenced to DVSS (1)	1.65	1.8	1.95	
SPKVDD(2)		Referenced to SPKVSS (1)	2.7		5.5	
IOVDD		Referenced to IOVSS (1)	1.1	1.8	3.6	
	Speaker impedance	Load applied across class-D output pins (BTL)	4			Ω
V_I	Analog audio full-scale input voltage	AVDD = 1.8V, single-ended		0.5		V_{RMS}
MCLK(3)	Master clock frequency	IOVDD = DVDD = 1.8V			50	MHz
SCL	SCL clock frequency				400	kHz
T_A	Operating free-air temperature		–40		85	°C

(1) All grounds on board are tied together, so they should not differ in voltage by more than 0.2 V maximum for any combination of ground signals. By use of a wide trace or ground plane, ensure a low-impedance connection between AVSS and DVSS.
(2) To minimize battery-current leakage, the SPKVDD voltage level should not be below the AVDD voltage level.
(3) The maximum input frequency should be 50 MHz for any digital pin used as a general-purpose clock.

5.4 Thermal Information

THERMAL METRIC(1)		TAS2505 RGE (QFN) 24 PINS	UNIT
θ_{JA}	Junction-to-ambient thermal resistance	32.2	°C/W
θ_{JCtop}	Junction-to-case (top) thermal resistance	30	°C/W

THERMAL METRIC(1)		TAS2505 RGE (QFN) 24 PINS	UNIT
θ_{JB}	Junction-to-board thermal resistance	9.2	°C/W
ψ_{JT}	Junction-to-top characterization parameter	0.3	°C/W
ψ_{JB}	Junction-to-board characterization parameter	9.2	°C/W
θ_{JCbot}	Junction-to-case (bottom) thermal resistance	2.2	°C/W

(1) For more information about traditional and new thermal metrics, see the *Semiconductor and IC Package Thermal Metrics* application report.

5.5 Electrical Characteristics

At 25°C, AVDD = 1.8V, IOVDD = 1.8V, SPKVDD = 3.6V, DVDD = 1.8V, f_S (audio) = 48kHz, CODEC_CLKIN = 256 × f_S, PLL = Off

V_{IL}		I_{IL} = 5µA, IOVDD ≥ 1.6V	–0.3		0.3 × IOVDD	V
		I_{IL} = 5µA, IOVDD < 1.6V			0	
V_{OH}		I_{OH} = 2 TTL loads	0.8 × IOVDD			V
V_{OL}		I_{OL} = 2 TTL loads			0.25	V
	Capacitive load			10		pF

(1) All performance measurements were done with a 20kHz low-pass filter and, where noted, an A-weighted filter. Failure to use such a filter may result in higher THD+N and lower SNR and dynamic range readings than shown in the Electrical Characteristics. The low-pass filter removes out-of-band noise, which, although not audible, may affect dynamic specification values.

(2) Ratio of output level with 1kHz full-scale sine-wave input, to the output level with the inputs short-circuited, measured A-weighted over a 20Hz to 20kHz bandwidth using an audio analyzer.

5.6 I²S/LJF/RJF Timing in Master Mode

All specifications at 25°C, DVDD = 1.8V(1)

PARAMETER		IOVDD = 1.8V		IOVDD = 3.3V		UNIT
		MIN	MAX	MIN	MAX	
t_d(WS)	WCLK delay		45		45	ns

All specifications at 25°C, DVDD = 1.8V[1]

PARAMETER		IOVDD = 1.8V		IOVDD = 3.3V		UNIT
		MIN	MAX	MIN	MAX	
t_s(DI)	DIN setup	8		6		ns
t_h(DI)	DIN hold	8		6		ns
t_r	Rise time		25		10	ns
t_f	Fall time		25		10	ns

t_h(DI)	DIN hold	8		8		ns
t_r	Rise time		4		4	ns
t_f	Fall time		4		4	ns

(1) All timing specifications are measured at characterization but not tested at final test.

5.10 I²C Interface Timing

All specifications at 25°C, DVDD = 1.8V(1)

PARAMETER		STANDARD MODE			FAST MODE			UNIT
		MIN	TYP	MAX	MIN	TYP	MAX	
f_{SCL}	SCL clock frequency	0		100	0		400	kHz
$t_{HD;STA}$	Hold time (repeated) START condition. After this period, the first clock pulse is generated.	4			0.8			µs
t_{LOW}	LOW period of the SCL clock	4.7			1.3			µs
t_{HIGH}	HIGH period of the SCL clock	4			0.6			µs
$t_{SU;STA}$	Setup time for a repeated START condition	4.7			0.8			µs
$t_{HD;DAT}$	Data hold time for I²C bus devices	0		3.45	0		0.9	µs
$t_{SU;DAT}$	Data setup time	250			100			ns
t_r	SDA and SCL rise time			1000	20 + 0.1 C_b		300	ns
t_f	SDA and SCL fall time			300	20 + 0.1 C_b		300	ns
$t_{SU;STO}$	Set-up time for STOP condition	4			0.8			µs
t_{BUF}	Bus free time between a STOP and START condition	4.7			1.3			µs
C_b	Capacitive load for each bus line			400			400	pF

(1) All timing specifications are measured at characterization but not tested at final test.

5.11 SPI Interface Timing

At 25°C, DVDD = 1.8V

PARAMETER		TEST CONDITION	IOVDD=1.8V			IOVDD=3.3V			UNIT
			MIN	TYP	MAX	MIN	TYP	MAX	
t_{sck}	SCLK period (1)		100			50			ns
t_{sckh}	SCLK pulse width High		50			25			ns
t_{sckl}	SCLK pulse width Low		50			25			ns
t_{lead}	Enable lead time		30			20			ns
t_{lag}	Enable lag time		30			20			ns
t_d	Sequential transfer delay		40			20			ns
t_a	Slave DOUT access time				40			40	ns
t_{dis}	Slave DOUT disable time				40			40	ns
t_{su}	DIN data setup time		15			15			ns
t_{hi}	DIN data hold time		15			10			ns
$t_{v;DOUT}$	DOUT data valid time				25			18	ns
t_r	SCLK rise time				4			4	ns
t_f	SCLK fall time				4			4	ns

(1) These parameters are based on characterization and are not tested in production.

6 Parameter Measurement Information

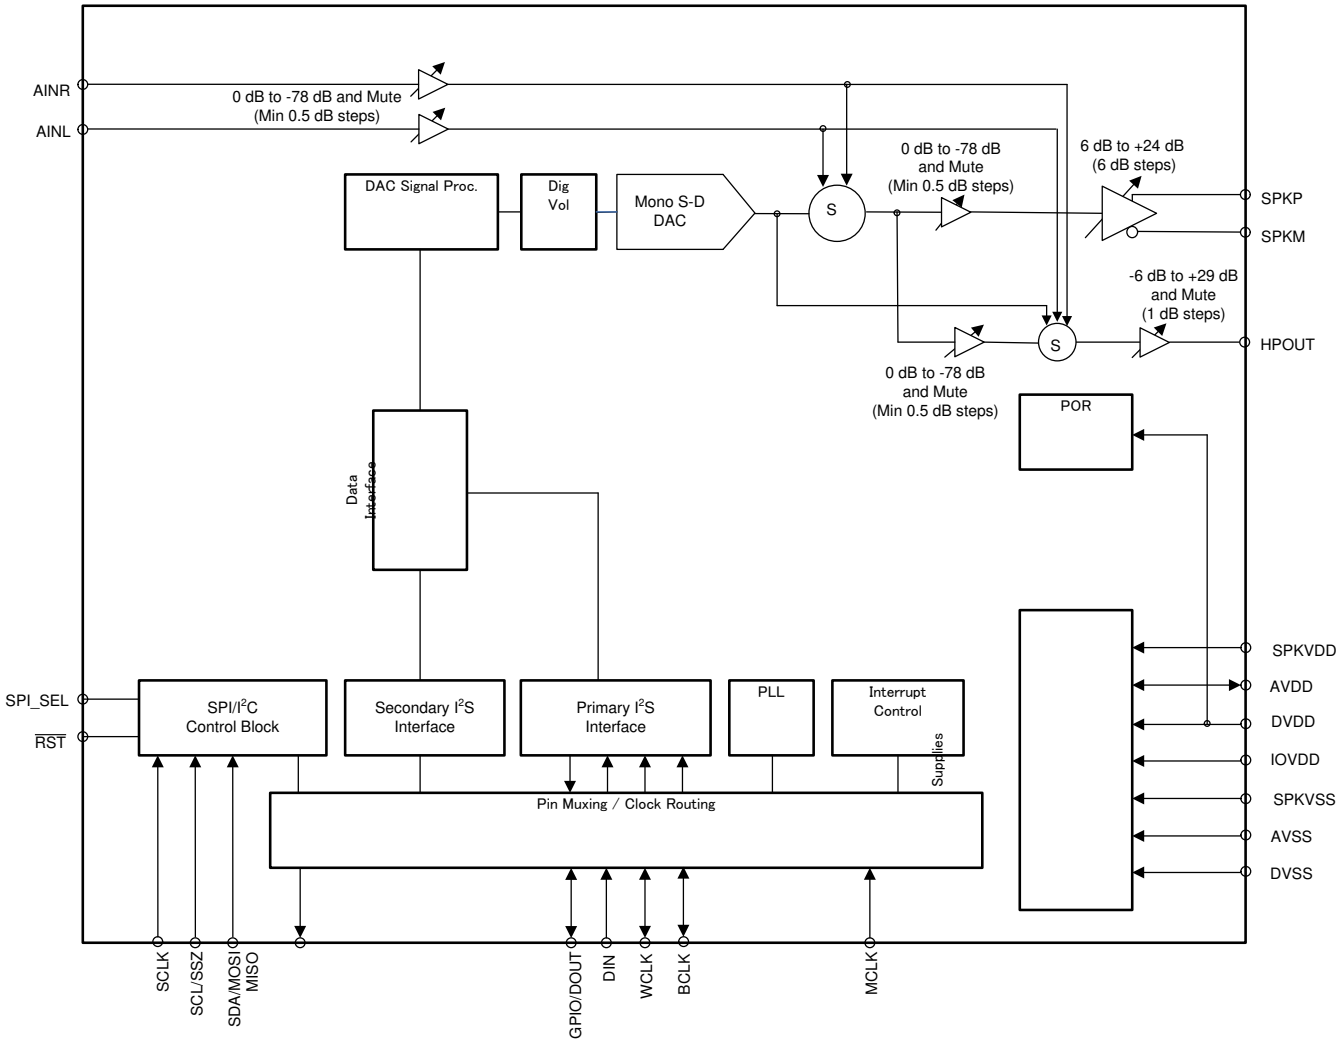
All parameters are measured according to the conditions described in the *Section 5* section.

7 Detailed Description

7.1 Overview

TAS2505 is a low power analog and digital input class-D speaker amplifier. It supports 24-bit digital I2S data for mono playback. This device is able to drive a speaker up to 4Ω and programmable digital-signal processing block. The programmable digital-signal processing block can support Bass boost, treble or EQ functions. The volume level can be controlled by register control. The device can be controlled through I^2C or SPI bus. The device also includes two analog inputs for mixing in speaker path.

7.2 Functional Block Diagram



7.3 Feature Description

7.3.1 Audio Analog I/O

The TAS2505 features a mono audio DAC. The TAS2505 can drive a speaker up to 4Ω impedance.

7.3.2 Audio DAC and Audio Analog Outputs

The mono audio DAC consists of a digital audio processing block, a digital interpolation filter, a digital delta-sigma modulator, and an analog reconstruction filter. The high oversampling ratio (normally DOSR is between 32 and 128) exhibits good dynamic range by ensuring that the quantization noise generated within the delta-sigma modulator stays outside of the audio frequency band. Audio analog outputs include mono class-D speaker

outputs. Because the TAS2505 contains a mono DAC, it inputs the mono data from the left channel, the right channel, or a mix of the left and right channels as [(L + R) ÷ 2], selected by page 0, register 63, bits D5–D4.

For more detailed information see the *TAS2505 Application Reference Guide* (SLAU472).

7.3.3 DAC

The TAS2505 mono audio DAC supports data rates from 8kHz to 192kHz. The audio channel of the mono DAC consists of a signal-processing engine with fixed processing blocks, a digital interpolation filter, a multi-bit digital delta-sigma modulator, and an analog reconstruction filter. The DAC is designed to provide enhanced performance at low sampling rates through increased oversampling and image filtering, thereby keeping quantization noise generated within the delta-sigma modulator and observed in the signal images strongly suppressed within the audio band to beyond 20kHz. To handle multiple input rates and optimize power dissipation and performance, the TAS2505 allows the system designer to program the oversampling rates over a wide range from 1 to 1024 by configuring page 0, register 13, and page 0 / register 14. The system designer can choose higher oversampling ratios for lower input data rates and lower oversampling ratios for higher input data rates.

The TAS2505 DAC channel includes a built-in digital interpolation filter to generate oversampled data for the delta-sigma modulator. The interpolation filter can be chosen from three different types, depending on the required frequency response, group delay, and sampling rate.

The DAC path of the TAS2505 features many options for signal conditioning and signal routing:

- Digital volume control with a range of –63.5 to +24dB
- Mute function

In addition to the standard set of DAC features the TAS2505 also offers the following special features:

- Digital auto-mute
- Adaptive filter mode

7.3.4 POR

TAS2505 has a POR (Power-On-Reset) function. This function insures that all registers are automatically set to defaults when a proper power up sequence is executed.

For more detailed information see the *TAS2505 Application Reference Guide* (SLAU472).

7.3.5 CLOCK Generation and PLL

The TAS2505 supports a wide range of options for generating clocks for the DAC sections as well as interface and other control blocks. The clocks for the DAC require a source reference clock. This clock can be provided on a variety of device pins, such as the MCLK, BCLK, or GPIO pins. The source reference clock for the codec can be chosen by programming the CODEC_CLKIN value on page 0, register 4, bits D1–D0. The CODEC_CLKIN can then be routed through highly-flexible clock dividers shown in Figure 2 through 7 in the *TAS2505 Application Reference Guide* to generate the various clocks required for the DAC and the Digital Effects section also found in the *TAS2505 Application Reference Guide* (SLAU472). In the event that the desired audio clocks cannot be generated from the reference clocks on MCLK, BCLK, or GPIO, the TAS2505 also provides the option of using the on-chip PLL which supports a wide range of fractional multiplication values to generate the required clocks. Starting from CODEC_CLKIN, the TAS2505 provides several programmable clock dividers to help achieve a variety of sampling rates for the DAC and clocks for the Digital Effects sections.

For more detailed information see the *TAS2505 Application Reference Guide* (SLAU472).

7.4 Device Functional Modes

7.4.1 Digital Pins

Only a small number of digital pins are dedicated to a single function; whenever possible, the digital pins have a default function, and also can be reprogrammed to cover alternative functions for various applications.

The fixed-function pins are $\overline{RST}$ LDO_SEL and the SPI_SEL pin, which are HW control pins. Depending on the state of SPI_SEL, the two control-bus pins SCL/SSZ and SDA/MOSI are configured for either I²C or SPI protocol.

Other digital IO pins can be configured for various functions through register control. An overview of available functionality is given in Section 7.4.3.

7.4.2 Analog Pins

Analog functions can also be configured to a large degree. For minimum power consumption, analog blocks are powered down by default. The blocks can be powered up with fine granularity according to the application needs.

7.4.3 Multifunction Pins

Table 7-1 shows the possible allocation of pins for specific functions. The PLL input, for example, can be programmed to be any of 4 pins (MCLK, BCLK, DIN, GPIO).

Table 7-1. Multifunction Pin Assignments

		1	2	3	4	5	6	7
	PIN FUNCTION	**MCLK**	**BCLK**	**WCLK**	**DIN**	**GPIO /DOUT**	**SCLK**	**MISO**
A	PLL Input	S(2)	S(3)		E		S(4)	
B	Codec Clock Input	S(2),D(5)	S(3)				S(4)	
C	I²S BCLK input		S(3),D					
D	I²S BCLK output		E(1)					
E	I²S WCLK input			E, D				
F	I²S WCLK output			E				
G	I²S DIN				E, D			
I	General-Purpose Output I					E		
I	General-Purpose Output II							E
J	General-Purpose Input I				E			
J	General-Purpose Input II					E		
J	General-Purpose Input III						E	
K	INT1 output					E		E
L	INT2 output					E		E
M	Secondary I²S BCLK input					E	E	
N	Secondary I²S WCLK input					E	E	
O	Secondary I²S DIN					E	E	
P	Secondary I²S BCLK OUT					E		E
Q	Secondary I²S WCLK OUT					E		E
R	Secondary I²S DOUT							E
S	Aux Clock Output					E		E

(1) E: The pin is **exclusively** used for this function, no other function can be implemented with the same pin. (If GPIO/DOUT has been allocated for General Purpose Output, it cannot be used as the INT1 output at the same time.)
(2) S(1): The MCLK pin can drive the PLL and Codec Clock inputs **simultaneously**.
(3) S(2): The BCLK pin can drive the PLL and Codec Clock and audio interface bit clock inputs **simultaneously**.
(4) S(3): The GPIO/DOUT pin can drive the PLL and Codec Clock inputs **simultaneously**.
(5) D: Default Function

7.4.4 Analog Signals

The TAS2505 analog signals consist of:

- Analog inputs AINR and AINL, which can be used to pass-through or mix analog signals to output stages

- Analog outputs class-D speaker driver providing output capability for the DAC, AINR, AINL, or a mix of the three

7.4.4.1 Analog Inputs AINL and AINR

AINL (pin 3 or C2) and AINR (pin 4 or B2) are inputs to Mixer P and Mixer M along with the DAC output. Also AINL and AINR can be configured inputs to HP driver. Page1 / register 12 provides control signals for determining the signals routed through Mixer P, Mixer M and HP driver. Input of Mixer P can be attenuated by Page1 / register 24, input of Mixer M can be attenuated by Page1 / register 25 and input of HP driver can be attenuated by Page1 / register 22. Also AINL and AINR can be configured to a monaural differential input with use Mixer P and Mixer M by Page1 / register 12 setting.

For more detailed information see the *TAS2505 Application Reference Guide* (SLAU472).

7.4.5 DAC Processing Blocks — Overview

The TAS2505 implements signal-processing capabilities and interpolation filtering through processing blocks. These fixed processing blocks give users the choice of how much and what type of signal processing they may use and which interpolation filter is applied.

The choices among these processing blocks allows the system designer to balance power conservation and signal-processing flexibility. Table 7-2 gives an overview of all available processing blocks of the DAC channel and their properties. The resource-class column gives an approximate indication of power consumption for the digital (DVDD) supply; however, based on the out-of-band noise spectrum, the analog power consumption of the drivers (AVDD) may differ.

The signal-processing blocks available are:

- First-order IIR
- Scalable number of biquad filters

The processing blocks are tuned for common cases and can achieve high image rejection or low group delay in combination with various signal-processing effects such as audio effects and frequency shaping. The available first-order IIR and biquad filters have fully user-programmable coefficients.

Table 7-2. Overview – DAC Predefined Processing Blocks

PROCESSING BLOCK NO.	INTERPOLATION FILTER	CHANNEL	FIRST-ORDER IIR AVAILABLE	NUMBER OF BIQUADS	RESOURCE CLASS
PRB_P1	A	Mono	Yes	6	6
PRB_P2	A	Mono	No	3	4
PRB_P3	B	Mono	Yes	6	4

For more detailed information see the *TAS2505 Application Reference Guide* (SLAU472).

7.4.6 Digital Mixing and Routing

The TAS2505 has four digital mixing blocks. Each mixer can provide either mixing or multiplexing of the digital audio data. The first mixer or multiplexer can be used to select input data for the mono DAC from left channel, right channel, or (left channel + right channel) / 2 mixing. This digital routing can be configured by writing to page 0, register 63, bits D5–D4.

7.4.7 Analog Audio Routing

The TAS2505 has the capability to route the DAC output to the speaker output. If desirable, both output drivers can be operated at the same time while playing at different volume levels. The TAS2505 provides various digital routing capabilities, allowing digital mixing or even channel swapping in the digital domain. All analog outputs other than the selected ones can be powered down for optimal power consumption.

For more detailed information see the *TAS2505 Application Reference Guide* (SLAU472).

7.4.8 Digital Audio and Control Interface

7.4.8.1 Digital Audio Interface

Audio data is transferred between the host processor and the TAS2505 via the digital audio data serial interface, or audio bus. The audio bus on this device is flexible, including left- or right-justified data options, support for I^2S or PCM protocols, programmable data-length options, a TDM mode for multichannel operation, flexible master or slave configurability for each bus clock line, and the ability to communicate with multiple devices within a system directly.

The audio bus of the TAS2505 can be configured for left- or right-justified, I^2S, DSP, or TDM modes of operation, where communication with standard telephony PCM interfaces is supported within the TDM mode. These modes are all MSB-first, with data width programmable as 16, 20, 24, or 32 bits by configuring page 0, register 27, bits D5–D4. In addition, the word clock and bit clock can be independently configured in either master or slave mode for flexible connectivity to a wide variety of processors. The word clock is used to define the beginning of a frame, and may be programmed as either a pulse or a square-wave signal. The frequency of this clock corresponds to the maximum of the selected DAC sampling frequencies.

For more detailed information see the *TAS2505 Application Reference Guide* (SLAU472).

7.4.8.2 Control Interface

The TAS2505 control interface supports SPI or I^2C communication protocols, with the protocol selectable using the SPI_SEL pin. For SPI, SPI_SEL should be tied high; for I^2C, SPI_SEL should be tied low. TI does not recommend changing the state of SPI_SEL during device operation.

7.4.8.2.1 I^2C Control Mode

The TAS2505 supports the I^2C control protocol, and will respond to the I^2C address of 0011 000. I^2C is a two-wire, open-drain interface supporting multiple devices and masters on a single bus. Devices on the I^2C bus only drive the bus lines LOW by connecting them to ground; they never drive the bus lines HIGH. Instead, the bus wires are pulled HIGH by pullup resistors, so the bus wires are HIGH when no device is driving them LOW. This way, two devices cannot conflict; if two devices drive the bus simultaneously, there is no driver contention.

7.4.8.2.2 SPI Digital Interface

In the SPI control mode, the TAS2505 uses the pins SCL/SSZ=SSZ, SCLK=SCLK, MISO=MISO, SDA/MOSI=MOSI as a standard SPI port with clock polarity setting of 0 (typical microprocessor SPI control bit CPOL = 0). The SPI port allows full-duplex, synchronous, serial communication between a host processor (the master) and peripheral devices (slaves). The SPI master (in this case, the host processor) generates the synchronizing clock (driven onto SCLK) and initiates transmissions. The SPI slave devices (such as the TAS2505) depend on a master to start and synchronize transmissions. A transmission begins when initiated by an SPI master. The byte from the SPI master begins shifting in on the slave MOSI pin under the control of the master serial clock (driven onto SCLK). As the byte shifts in on the MOSI pin, a byte shifts out on the MISO pin to the master shift register.

For more detailed information see the *TAS2505 Application Reference Guide* (SLAU472).

7.4.8.3 Device Special Functions

- Interrupt generation
- Flexible pin multiplexing

For more detailed information see the *TAS2505 Application Reference Guide* (SLAU472).

9 Application and Implementation

Note

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

9.1 Application Information

The TAS2505 is a digital or analog input Class-D audio power amplifier. Below are shown different setups that show the features of the TAS2505.

9.2 Typical Applications

9.2.1 Typical Configuration

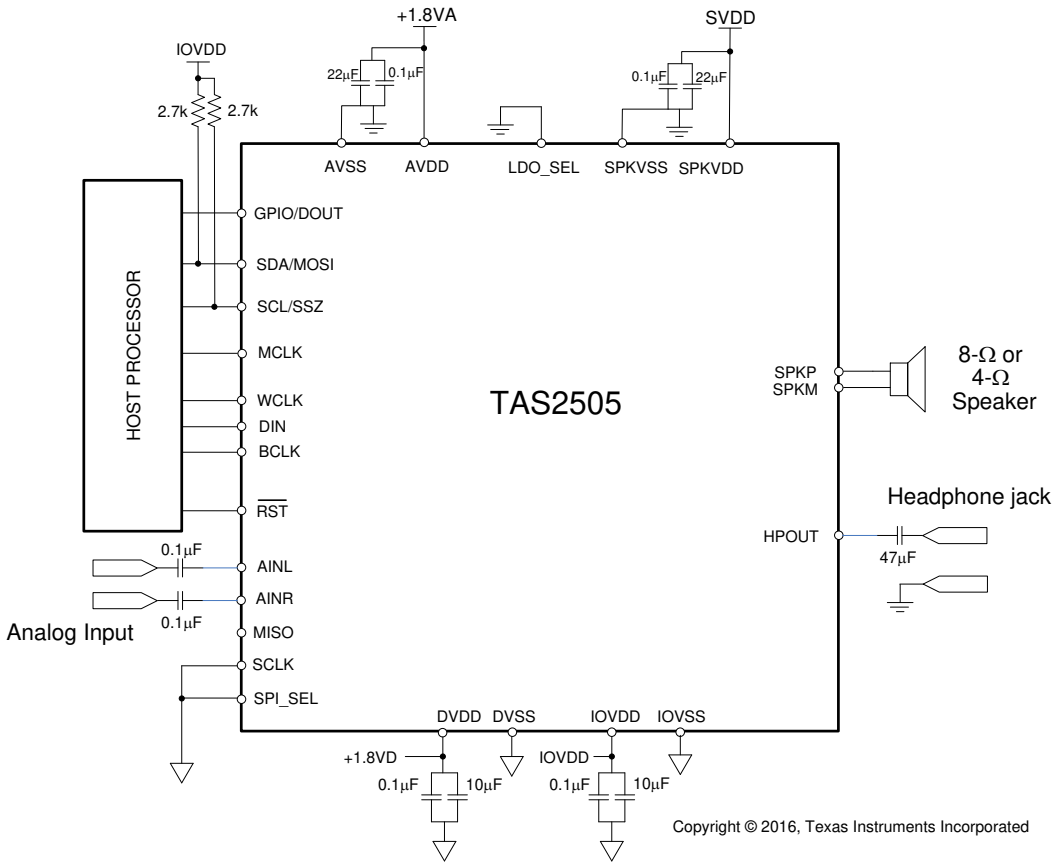

Figure 9-1. Typical Circuit Configuration

9.2.1.1 Design Requirements

Table 9-1 shows the design parameters.

Table 9-1. Design Parameters

PARAMETER	EXAMPLE VALUE
Audio input	Digital Audio (I^2S), Analog Audio AINx
Speaker	8Ω or 4Ω

9.2.1.2 Detailed Design Procedure

In this application, the device is able to use both digital and analog inputs, working in mono output by summing left and right analog inputs and output from DAC and routing this signal into the speaker output.

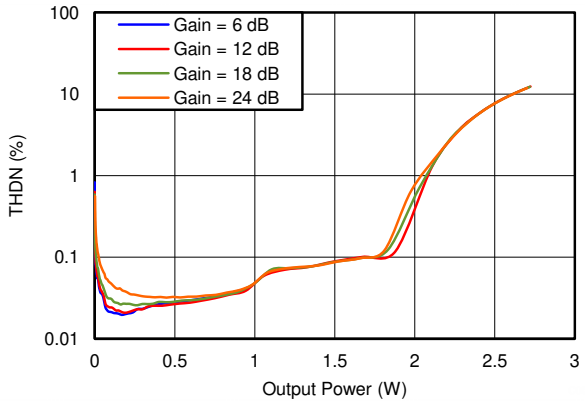
External 1.8V supply is used to power AVDD and DVDD. IOVDD can be supplied by voltages between 1.1V and 3.6V which lets the system to use conventional 1.8V or 3.3V supplies. The SPKVDD can be connected to voltages between 2.7V and 5.5V, although it is usually supplied by a 5V voltage.

Decoupling capacitors should be used at all the supply lines. TI recommends using 0.1µF, 10µF, and 22µF capacitors for a better system performance.

Decoupling series capacitors must be used at the analog input.

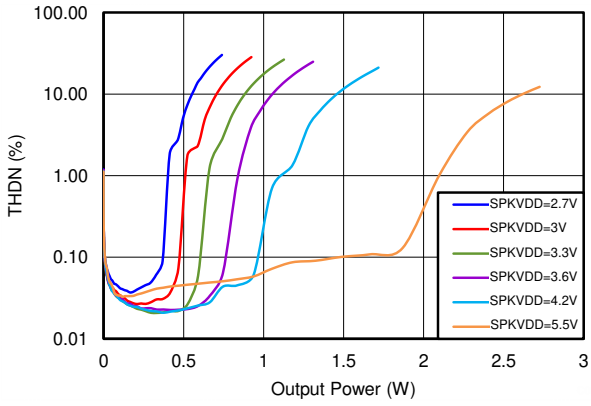
All grounds are tied together; route analog and digital paths are separated to avoid interference.

9.2.1.3 Application Curves



(SPKVDD = 5.5V)

Figure 9-2. Total Harmonic Distortion + Noise vs 4Ω Speaker Power



(Gain = 18dB)

Figure 9-3. Total Harmonic Distortion + Noise vs 4Ω Speaker Power

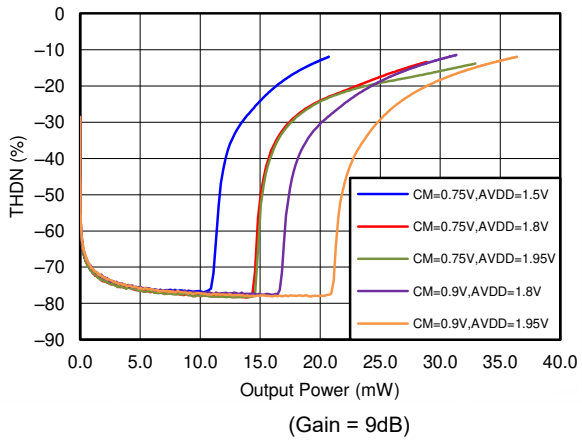


Figure 9-4. Total Harmonic Distortion + Noise vs HP Power

9.3 Power Supply Recommendations

The TAS2505 integrates a large amount of digital and analog functionality, and each of these blocks can be powered separately to enable the system to select appropriate power supplies for desired performance and power consumption. The device has separate power domains for digital IO, digital core, analog core, analog input and speaker drivers. If desired, all of the supplies (except for the supplies for speaker drivers, which can directly connect to the battery) can be connected together and be supplied from one source in the range of 1.65 to 1.95V. Individually, the IOVDD voltage can be supplied in the range of 1.1V to 3.6V. For improved power efficiency, the digital core power supply can range from 1.26V to 1.95V. The AVDD pin can directly be driven with a voltage in the range of 1.5V to 1.95V. The speaker driver voltages (SPKVDD) can range from 2.7V to 5.5V. SPKVDD supply slew rate needs to be lower than 20ms.

For more detailed information see the *TAS2505 Application Reference Guide* (SLAU472).

9.4 Layout

9.4.1 Layout Guidelines

- If the analog input, AINR and AINL, are:
  - Used, analog input traces must be routed symmetrically for true differential performance.
  - Used, do not run analog input traces parallel to digital lines.
  - Used, they must be AC-coupled.
  - Not used, they must be shorted together.
- Use a ground plane with multiple vias for each terminal to create a low-impedance connection to GND for minimum ground noise.
- Use supply decoupling capacitors.

9.4.2 Layout Example

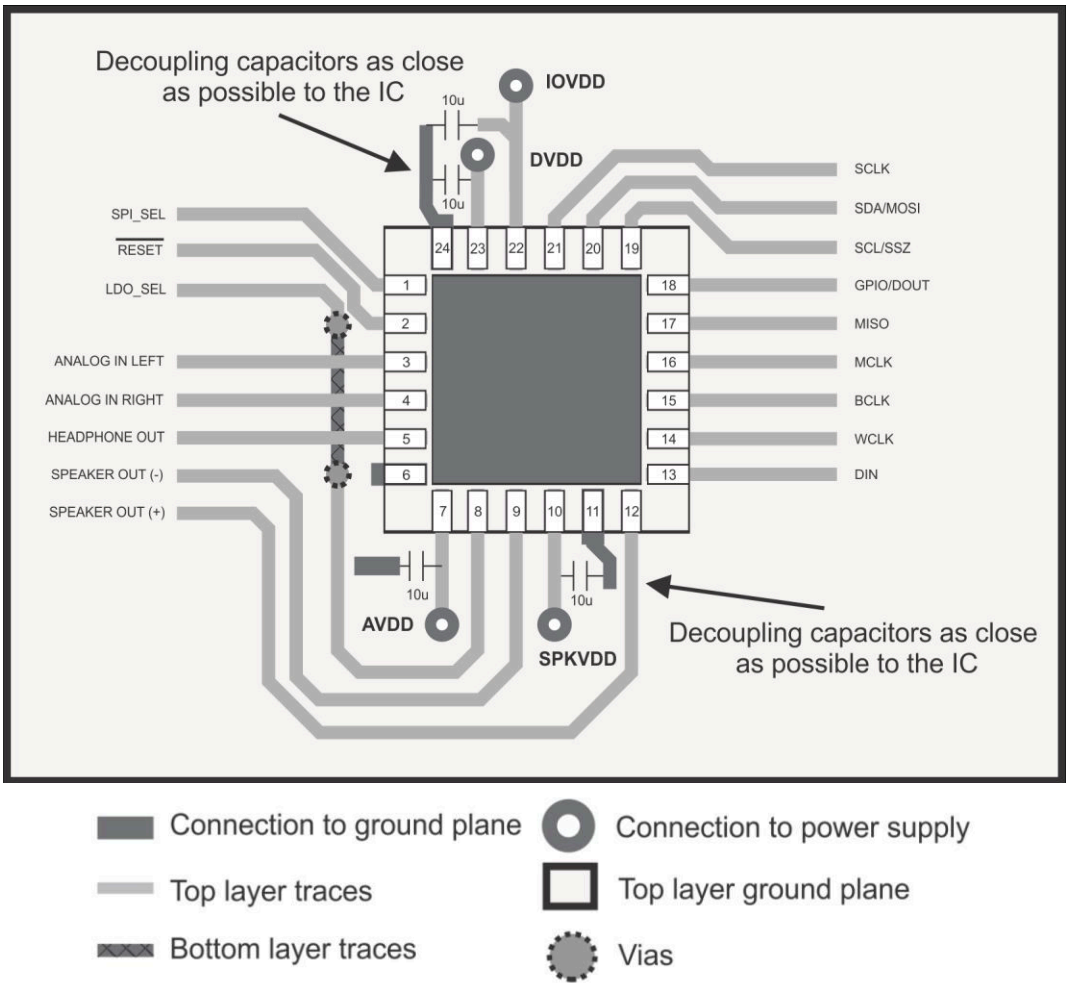

Figure 9-5. Layout Diagram

10 Device and Documentation Support

10.1 Third-Party Products Disclaimer

TI'S PUBLICATION OF INFORMATION REGARDING THIRD-PARTY PRODUCTS OR SERVICES DOES NOT CONSTITUTE AN ENDORSEMENT REGARDING THE SUITABILITY OF SUCH PRODUCTS OR SERVICES OR A WARRANTY, REPRESENTATION OR ENDORSEMENT OF SUCH PRODUCTS OR SERVICES, EITHER ALONE OR IN COMBINATION WITH ANY TI PRODUCT OR SERVICE.

10.2 Documentation Support

10.2.1 Related Documentation

For related documentation see the following:

TAS2505 Application Reference Guide (SLAU472)

10.3 Receiving Notification of Documentation Updates

To receive notification of documentation updates, navigate to the device product folder on ti.com. Click on *Notifications* to register and receive a weekly digest of any product information that has changed. For change details, review the revision history included in any revised document.

10.4 Support Resources

TI E2E™ support forums are an engineer's go-to source for fast, verified answers and design help — straight from the experts. Search existing answers or ask your own question to get the quick design help you need.

Linked content is provided "AS IS" by the respective contributors. They do not constitute TI specifications and do not necessarily reflect TI's views; see TI's Terms of Use.

10.5 Trademarks

TI E2E™ is a trademark of Texas Instruments.
All trademarks are the property of their respective owners.

10.6 Electrostatic Discharge Caution

This integrated circuit can be damaged by ESD. Texas Instruments recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage.

ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because very small parametric changes could cause the device not to meet its published specifications.

10.7 Glossary

TI Glossary — This glossary lists and explains terms, acronyms, and definitions.

10.8 Community Resources

11 Revision History

NOTE: Page numbers for previous revisions may differ from page numbers in the current version.

Changes from Revision C (September 2021) to Revision D (January 2025)	Page
• Errata in RevC datasheet with the LDO_SEL feature fixed	3

Changes from Revision B (November 2016) to Revision C (September 2021)	Page
• Removed all references to LDO mode and LDO_SEL pin throughout data sheet	1

Changes from Revision A (February 2013) to Revision B (November 2016) **Page**

- Added *Device Information* table, *ESD Ratings* table, *Feature Description* section, *Device Functional Modes*, *Application and Implementation* section, *Power Supply Recommendations* section, *Layout* section, *Device and Documentation Support* section, and *Mechanical, Packaging, and Orderable Information* section. 1

Changes from Revision * (February 2013) to Revision A (February 2013) **Page**

- Deleted P_O (Max Output power) SPKVDD = 5.5 V, THD = 10%..... 5
- Changed P_O (Max Output power) SPKVDD = 5.5 V value From: TYP = 2.1 W To: MAX = 2 W..... 5

12 Mechanical, Packaging, and Orderable Information

The following pages include mechanical, packaging, and orderable information. This information is the most current data available for the designated devices. This data is subject to change without notice and revision of this document. For browser-based versions of this data sheet, refer to the left-hand navigation.

The TAS2505TRGERQ1 orderable part number uses package outline RGE0024K, and the TAS2505ATRGERQ1 orderable part number uses package outline RGE0024Y.

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead finish/ Ball material (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TAS2505IRGER	ACTIVE	VQFN	RGE	24	3000	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	TAS 2505	Samples
TAS2505IRGET	ACTIVE	VQFN	RGE	24	250	RoHS & Green	NIPDAU	Level-2-260C-1 YEAR	-40 to 85	TAS 2505	Samples

(1) The marketing status values are defined as follows:
ACTIVE: Product device recommended for new designs.
LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.
NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.
PREVIEW: Device has been announced but is not in production. Samples may or may not be available.
OBSOLETE: TI has discontinued the production of the device.

(2) **RoHS:** TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".
RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.
Green: TI defines "Green" to mean the content of Chlorine (Cl) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead finish/Ball material - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead finish/Ball material values may wrap to two lines if the finish value exceeds the maximum column width.

These resources are intended for skilled developers designing with TI products. You are solely responsible for (1) selecting the appropriate TI products for your application, (2) designing, validating and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, regulatory or other requirements.

These resources are subject to change without notice. TI grants you permission to use these resources only for development of an application that uses the TI products described in the resource. Other reproduction and display of these resources is prohibited. No license is granted to any other TI intellectual property right or to any third party intellectual property right. TI disclaims responsibility for, and you will fully indemnify TI and its representatives against, any claims, damages, costs, losses, and liabilities arising out of your use of these resources.

TI’s products are provided subject to TI’s Terms of Sale or other applicable terms available either on ti.com or provided in conjunction with such TI products. TI’s provision of these resources does not expand or otherwise alter TI’s applicable warranties or warranty disclaimers for TI products.

TI objects to and rejects any additional or different terms you may have proposed.
