

PHOTO OF THE PROTOTYPE

1 Startup

The behavior of the converter at startup is shown in the images below. The input voltage has been set to 230Vac, 50Hz and 120Vac, 60Hz in both loaded and unloaded conditions. After applying the AC source, 7V isolated supply has been connected to pin 5 of J5, which enables the power stage.

Ch1: PFC output voltage, J1-1 (100V/div, 50ms/div), 20MHz BWL for all waveforms.

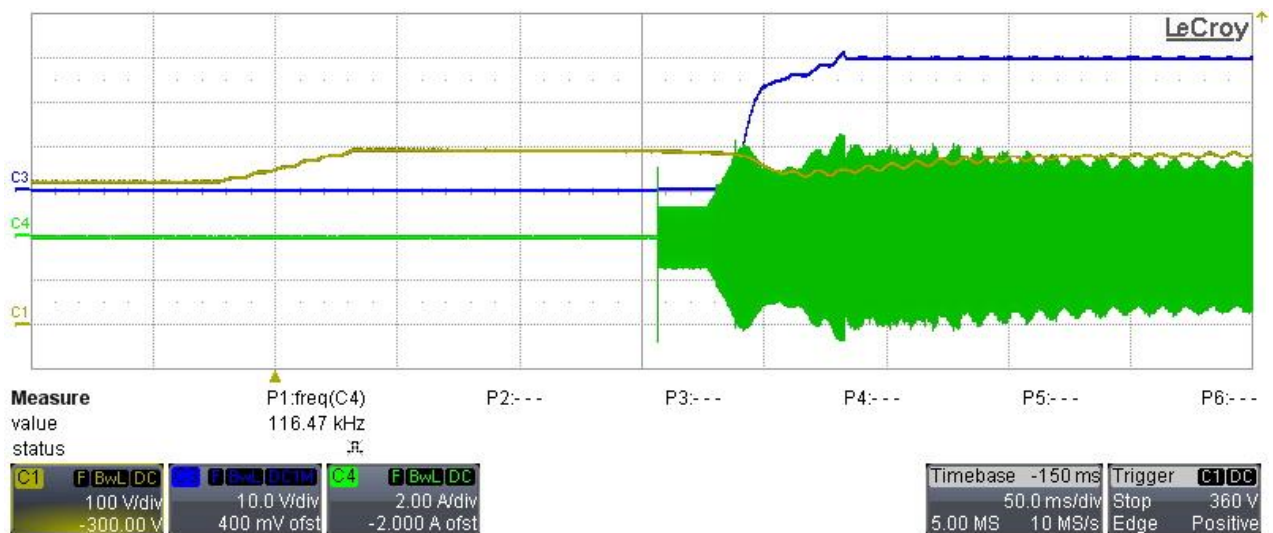

Ch3: Vout voltage, TP5 (10V/div)

Ch4: Resonant current (through L4) (2A/div)

Vin = 230Vac, 50Hz, Iout = 0

Vin = 230Vac, 50Hz, Iout = 12.5A

Vin = 120Vac, 60Hz, Iout = 0

Vin = 120Vac, 60Hz, Iout = 12.5A

2 Shut down

The AC source has been switched off and the behavior of the converter measured. The input voltage has been set to 230Vac, 50Hz and 120Vac, 60Hz, in both cases with the output fully loaded.

Ch1: PFC output voltage, J1-1 (100V/div, 50ms/div), 20MHz BWL for all waveforms.

Ch3: Vout voltage, TP5 (10V/div)

Ch4: Input AC current (J6 1-3) (2A/div)

Vin = 230Vac, 50Hz

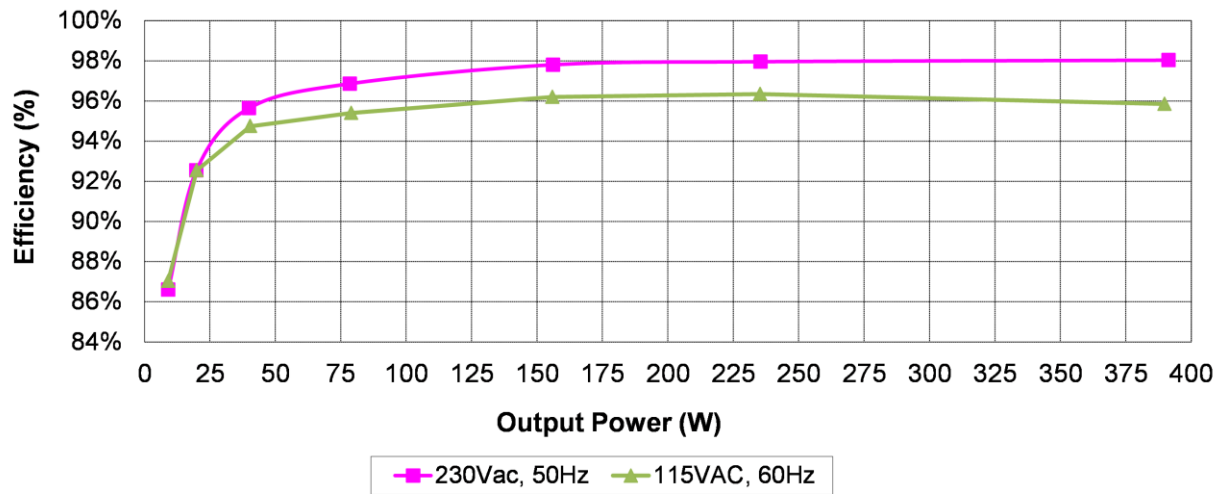

Vin = 120Vac, 60Hz

3 Efficiency

The efficiency data are shown in the tables and graphs below. The data show the PFC + AUX section, the LLC power stage (only) efficiency and the total plug-to-plug. The Auxiliary power supply was feeding only the housekeeping for this measurement.

PFC + Auxiliary Flyback section, supplied by PMP30191 Flyback

PFC + Auxiliary Flyback section efficiency data:

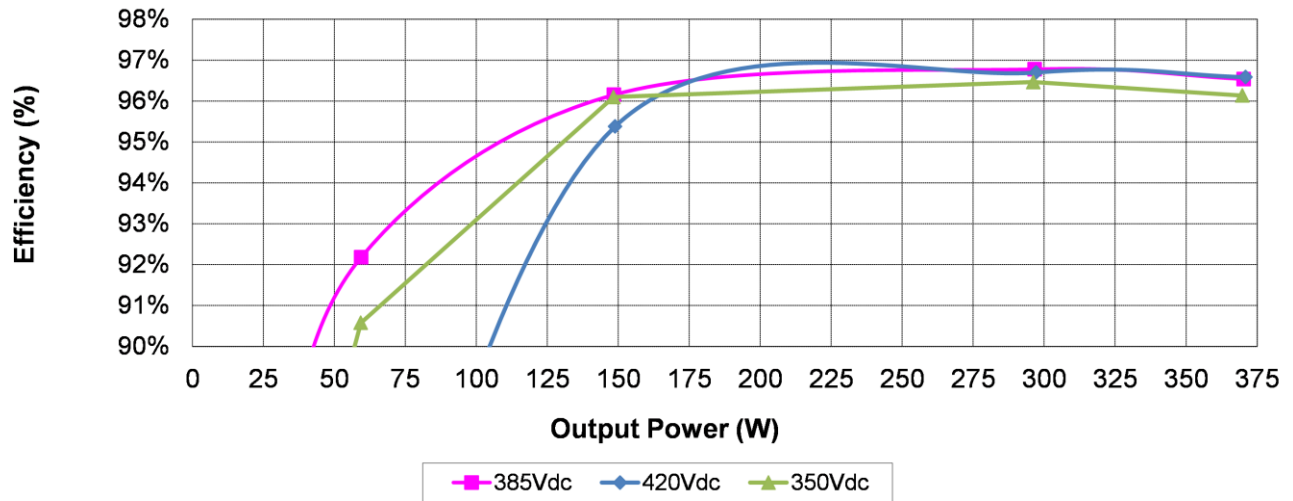

| Vin (AC) | Pin(W) | PF | Vout (V) | Iout (mA) | Pout (W) | Efficiency (%) |

4 Output voltage regulation (PFC and 29Vout) vs. load

The graphs below show the static variation of output voltage versus load regarding PFC output (top picture, taken at different input AC voltages) and LLC (29Vout) output.

PFC output voltage vs. load and VAC:

LLC output voltage vs. load:

5 Power factor

The Power Factor graph versus Vin and PFC Stage output power is shown below.

6 Output ripple voltage

The output ripple voltages for PFC and LLC stage are shown in the plots below. The input was set respectively to 120VAC, 60Hz and 230Vac, 50Hz with 29V output fully loaded.

Ch1: PFC voltage, J1-1 (5V/div, AC coupling, 20 MHz BWL)

Ch3: 29Vout, TP5 (200mV/div, AC coupling, 20 MHz BWL)

Vin = 120VAC, 60Hz

Vin = 230VAC, 50Hz

Ch1: PFC voltage, J1-1 (5V/div, AC coupling, 20 MHz BWL)

Ch3: 29Vout, TP5 (200mV/div, AC coupling, 20 MHz BWL)

7 Transient response

The graphs below show the responses of the main output (29Vout) during output current variation respectively between 1A & 6A and 6A to 12.5A, measured at 230VAC input.

Ch3: 29Vout, TP5 (500mV/div, 20ms/div, AC coupling, 20MHz BWL)

Ch4: Output current (5A/div, DC coupling, 20MHz BWL)

Vin = 230VAC, 50Hz, Iout 1A → 6A transients

Ch3: 29Vout, TP5 (500mV/div, 20ms/div, AC coupling, 20MHz BWL)

Ch4: Output current (5A/div, DC coupling, 20MHz BWL)

Vin = 230VAC, 50Hz, Iout 6A → 12.5A transients

8 Switching node waveforms

The image below shows the LLC switch node (Drain-Source of Q11), the voltage across C53 and the current trough L4 (resonant current I_R) at full load and Vin = 230Vac, 50Hz (all waveforms taken @ 20MHz BWL)

Ch1: V_{C53} (100V/div, 5us/div)

Ch2: $V_{DS}(Q11)$ (100V/div)

Ch4: $I_R(L4)$ (5A/div)

The image below shows the synchronous rectification V_{DS} voltage of Q10 and both gate waveforms of Q10 and Q12, as well as the resonant current I_R , at full load and $V_{in} = 230V_{ac}$.

- Ch1: $V_{GS}(Q10)$ (5V/div, 2 μ s/div, 20 MHz BWL)
- Ch2: $V_{GS}(Q12)$ (5V/div, 20 MHz BWL)
- Ch3: $V_{DS}(Q10)$ (20V/div, **no BWL**)
- Ch4: $I_R(L4)$ (5A/div, 20 MHz BWL)

9 Input voltage and current waveforms

The images below show PFC input AC voltage and current (J6) respectively at 90VAC and 120VAC (60Hz) as well as 230VAC, and 264VAC (50Hz) in full load condition. Oscilloscope setup was the same for all four screenshots.

- Ch1: Input AC voltage (100V/div, 5ms/div, 20MHz BWL)
- Ch4: Input AC current (10V/div, 20MHz BWL)

$V_{in} = 90V_{AC}, 60Hz$

Vin = 120VAC, 60Hz

Vin = 230VAC, 50Hz

Vin = 264VAC, 50Hz

10 Input voltage and current waveforms during inrush

The images below show PFC output voltage, input AC current and 29Vout waveforms during AC source turn on; the source was set to 120Vac, 60Hz and 230Vac, 50Hz. The main 29V output voltage was fully loaded as well as unloaded.

Ch1: PFC output voltage (100V/div, 50ms/div, 20MHz BWL)

Ch2: 29Vout, TP5 (10V/div, 20MHz BWL)

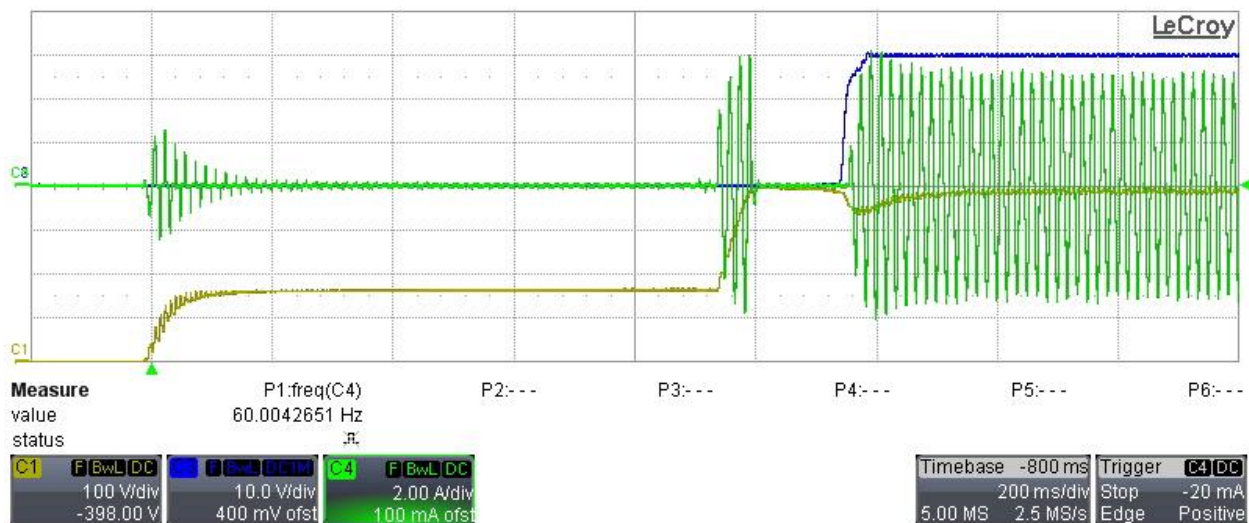

Ch4: Input AC current (2A/div, 20MHz BWL)

Vin = 120Vac, 60Hz, no load

Same oscilloscope setup as above.

Vin = 120Vac, 60Hz, full load

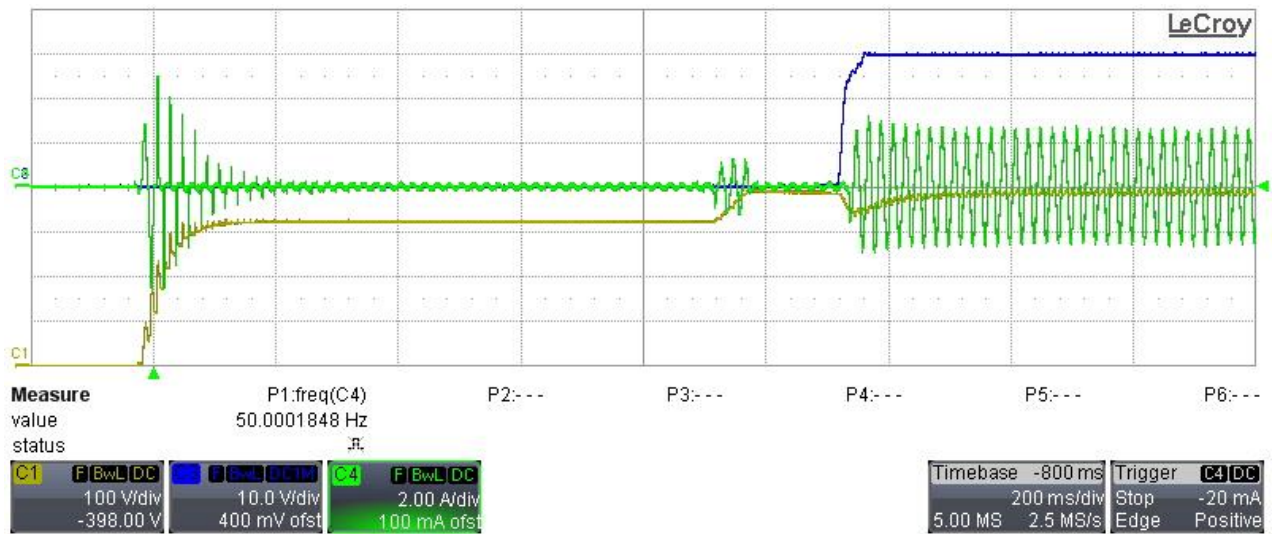

Same oscilloscope setup as above.

Vin = 230Vac, 50Hz, no load

Same oscilloscope setup as above.

V_{in} = 230Vac, 50Hz, full load

11 Feedback loop response of LLC converter

The graphs below show the bode plots of main LLC converter (29Vout) when loaded @ 6A and 12.5A. The input voltage was always 230Vac.

6A load: crossover frequency (F_{CO}) = 274Hz, phase margin = 94 deg, gain margin = 16.5dB.

12.5A load: F_{CO} = 311Hz, phase margin = 91.6 deg, gain margin = 16.4dB.

12 Thermal analysis

The thermal images have been taken after one hour in steady state condition, at full load and and at 120VAC as well as 230VAC input voltage. The board was placed vertically on the bench without any forced convection. The ambient temperature was 25°C.

Vin = 120VAC, 60Hz

| Name | Temperature | Background |
|------|-------------|------------|
| Q10 | 75.7°C | 25.0°C |
| Q12 | 75.9°C | 25.0°C |
| T1 | 78.0°C | 25.0°C |
| L4 | 72.3°C | 25.0°C |
| L3 | 74.4°C | 25.0°C |
| D3 | 75.1°C | 25.0°C |
| HS1 | 68.6°C | 25.0°C |
| L2 | 56.1°C | 25.0°C |
| C55 | 66.7°C | 25.0°C |

Vin = 230VAC, 50Hz

| Name | Temperature | Background |
|------|-------------|------------|
| T1 | 69.1°C | 25.0°C |
| L4 | 68.3°C | 25.0°C |
| L3 | 56.3°C | 25.0°C |
| C55 | 56.9°C | 25.0°C |
| D3 | 53.2°C | 25.0°C |
| HS1 | 52.6°C | 25.0°C |
| L2 | 39.1°C | 25.0°C |

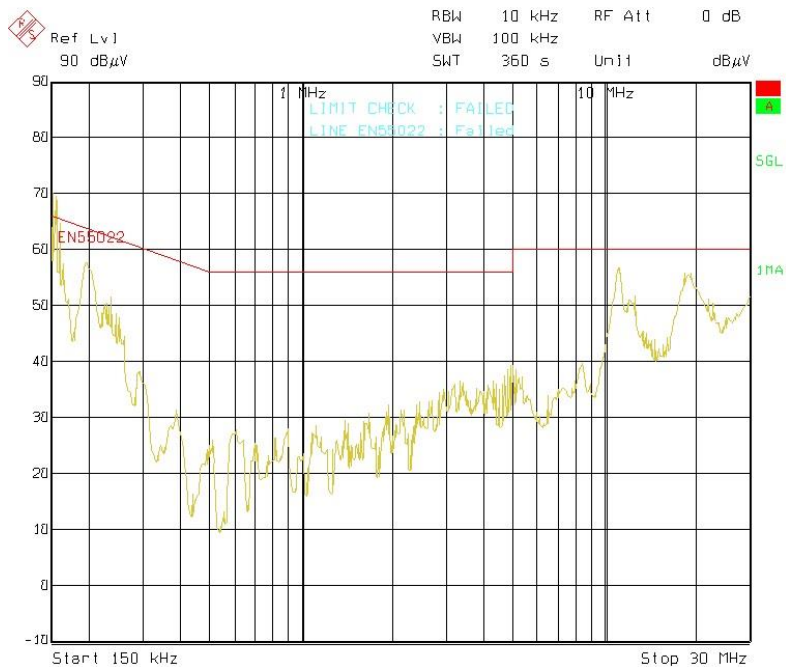

13 EMI measurement

The graphs below show the EMI measurements of the converter connected to an isolation transformer by means of a Hameg HM6050-2 LISN. The supply voltage was 230VAC. The converter has been loaded with an electronic load and fully loaded. The output negative terminal of the converter has been connected to the ground of the LISN. The detector of the receiver was set to “quasi-peak” and the limit is the equivalent EN55022 grade B.
